Physical Activity Promotion at the Workplace: Design Matters

IOM Physical Activity Workshop

Obesity Solutions Roundtable

April 13-15, 2015

Outline

- The changing workplace
- The need for physical activity and movement
- Organizing framework
- Design principles for best practice programs
- Case example
- Discussion

The Workplace is Changing...

Among other important shifts,

- Technology is changing the energy requirements of the job
- Sedentary job types create positive energy balance
- Technology enables employees to work remotely
- The workforce is aging and people are working longer prior to retirement
- Media and communications technologies vary widely in reaching workers/families to promote PA

Work is Changing...

On-the-job energy expenditure has reduced over the past 50 years by ~100 kcal/day (Church, et al. *PLoS ONE*, 2011)

Workers are Changing...

Obesity levels of the U.S. workforce have ~doubled over the past 30 years (Pronk. *Ann Rev Public Health*, 2015)

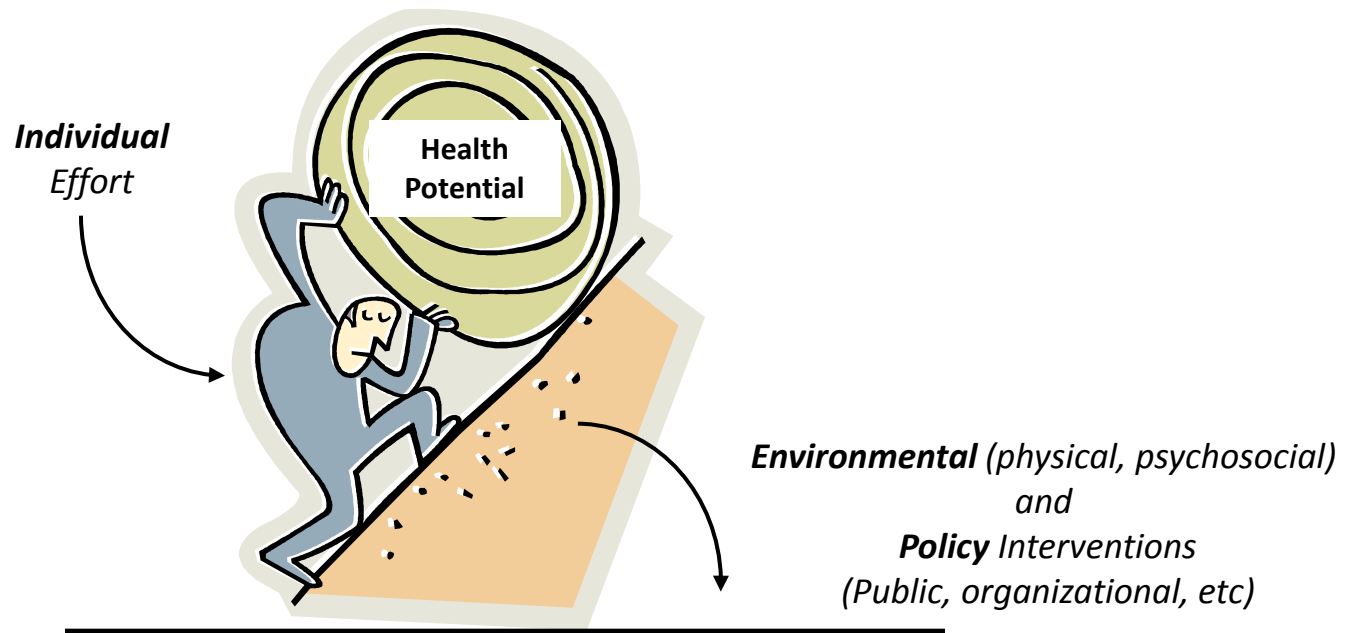

Figure 3

Employee obesity prevalence over time, based on nationally representative study populations.

The Need for Physical Activity and Movement

- Physical activity is associated with 4.7% lower health care charges per active day per week
(Pronk, et al. JAMA, 1999)
- Physical inactivity, overweight, and obesity combined were associated with 23% of health plan health care charges and 27% of national health care charges
(Anderson, et al. PCD, 2005)
- Based on a systematic review of population-level physical activity interventions, the most efficient programs are those that increase walking and biking. Cost effectiveness indicators:
 - community rail-trails (\$0.006/MET-h)
 - Pedometers (\$0.014/MET-h)
 - School health education (\$0.056/MET-h)*(Laine, et al. AJHP, 2014)*

Making healthy choices easy choices

What Works to Promote PA at the Workplace?

- Building PA into the workday
 - Workflow design, PA “booster” breaks, walking meetings
- Building PA into the physical workplace
 - Staircases, sit-stand devices, activity-friendly campus, incentives, leadership, etc.
- Creative use of technology
 - wearable PA tracking devices, online resources
- Promotion of active commuting
 - Bicycle-to-work programs; public transportation
- Building a PA-friendly work culture

What Works to Promote PA at the Workplace?

- Based on systematic reviews:
 - pedometer programs can increase daily step count
 - active travel (bike/walk to work) can increase daily PA
 - Workplace coaching can increase daily PA

(Dugdill, et al. Int'l J Workplace Health Manage, 2008)
- Barriers to PA occurs at multiple levels of influence—program design should use ecological or multi-level models
- Recommendations for PA promotion at the workplace include those from the National Physical Activity Plan [NPAP]:
 - Comprehensive, multi-component, socio-ecological model based

(Pronk. J Physical Act Health, 2009)

A Translational Framework for Program Design

		Make Being Active...						
		Possible	Simple	Socially rewarding	Financially rewarding	Personally relevant	Organizationally relevant	Community connected
Levels of Influence	Individual							
	Inter-Personal							
	Organizational							
	Environmental							

Exceptional Customer and User Experience

Outcomes

Health, Productivity, Financial ROI

Identification of Best Practices

- Review of 28 scientific and “grey” literature, industry reports, and consensus statements
- Generated 44 best practices, such as:
 - Organizational commitment to a healthy culture
 - Adequate resourcing
 - Meaningful and relevant incentives
 - Wellness champion network
- Some are tactics, some are approaches, some are strategies...
- ***What are the design principles we should pay attention to?***

Best Practice Program Design Principles

Based on
44 Best
practices

- **Design for success**
 1. Leadership
 2. Relevance
 3. Partnership
 4. Comprehensiveness
 5. Implementation
 6. Engagement
 7. Communications
 8. Data-driven
 9. Compliance

Best Practice Program Design Principles

1. *Leadership*

- Setting vision; assign accountability; ensure structural support/resources; engage leaders; set policy

2. *Relevance*

- Address needs and interests that optimize participation; linked to long-term engagement

3. *Partnership*

- Integration with multiple stakeholders (internal and external)

Best Practice Program Design Principles

4. *Comprehensiveness*

- Meet the definition of comprehensive programs as per Healthy People 2010 (health education, supportive environments, integration into the company's structure, linkage to other programs such as EAP, screenings)

5. *Implementation*

- A planned, coordinated, and fully executed work plan

6. *Engagement*

- Promotion of respect, trust, and co-ownership; leveraging company culture; use of incentives that optimizes intrinsic motivation; environments that make healthy decisions the easy choice

Best Practice Program Design Principles

7. *Communications*

- Use of a formal communications strategy linked to goals and objectives; multiple delivery channels and modes

8. *Data Driven*

- Insights based on data and ongoing measurement and monitoring; continuous improvement approach; data security, data integrity

9. *Compliance*

- Meeting regulatory standards and requirements (HIPAA, ADA, GINA, State law, etc.); data confidentiality

Case Example: Building Vitality at IBM

- PA and fitness as part of an overall employee well-being effort
- An online PA resource called the “Virtual Fitness Center” (VFC)
- The VFC serves as an interactive behavior change tool with goal setting, activity logging, team-based campaigns, progress reports, coaching access, and incentives to participate

Select	Activity/Exercise	Days Per Week	Units Per Day
<input type="checkbox"/>	Any Exercise	0-12	0 Minutes
<input checked="" type="checkbox"/>	Cardio Exercise	2-12	30 Minutes
<input type="checkbox"/>	Cycling	0-12	0 Minutes
<input type="checkbox"/>	Flexibility	0-12	0 Minutes
<input checked="" type="checkbox"/>	Running	2-12	30 Minutes
<input type="checkbox"/>	Strength Training	0-12	0 Minutes
<input type="checkbox"/>	Swimming	0-12	0 Minutes
<input type="checkbox"/>	Walking	0-12	0 Minutes

Submitted Questions

Jessica is an ACSM certified Personal Trainer, an AFPA Primary Group Exercise Instructor, a Schwinn Cycling Instructor, and a National Board of Fitness Examiners Certified Personal Trainer. Her specialties include working with "First Timers" in 5K running, Sprint Training, women's fitness, strength training. She also has experience with exercise programs for busy people and functional exercise programs. JESSICA also has great knowledge in body composition, cardiovascular exercise, cross training, cycling, general fitness and goal setting guidance and support.

Mike is an NSCA certified Strength and Conditioning Coach. He is also an ACSM certified Health Fitness Instructor. He specializes in Sports Performance Training and Injury Prevention. In his free time, Mike enjoys running, weight lifting, cycling, playing golf and baseball, sailing trips to the beach and reading novels.

Ashley is an ACSM certified Health and Fitness instructor. Her fitness specialties include: Running, Weight Training, Weight Loss. She is an avid runner and enjoys Scuba as a hobby.

5. "Ask Our Pros" Online Q&A

Case Example: Building Vitality at IBM

- Results
 - Year 1 participation: ~16,000 users (12.5%) (no incentive)
 - Year 2-4 participation: >80,000 users (63%) (incentives added)
 - Improvements among VFC users in:
 - PA-related risks (52%), health perceptions, life satisfaction, smoking, body weight, overall risk status
 - Average annual health care costs among VFC users between 2003 and 2005 increased by \$291/yr compared to \$360/yr for non-users
 - Significantly lower inpatient hospital costs, heart disease costs, and costs to treat diabetes among VFC users

Conclusions

- The workplace is a complex and dynamic environment
- PA and movement enhance worker performance and support positive business outcomes
- PA promotion should be an integral part of an overall well-being strategy
- Organizing frameworks and principles for best practice program design are available

Thank You!
