

**Institute of Medicine
Workshop:
Policies Targeting
Consumer Preferences
for Higher Value Care**

Jennifer Sweeney
Director, *Americans for*
Quality Health Care

September 10, 2009

The National Partnership

- ~ More than 35 years experience working on issues important to women and families.
- ~ **Priorities:**
 - Ensure every American has quality, affordable health care
 - Promote fairness in the workplace
 - Advance policies that help women and men meet the dual demands of work and family

Do Consumers View Health Care with a “Value Lens”?

- ~ National and State-Based Consumer Advocate Perspective
- ~ General Public Perspective

Consumer Engagement Strategies

- ~ Patient-Centered Primary Care
- ~ Patient Experience Surveys in All Settings of Care
- ~ Information & Benefit Design

Patient-Centered Primary Care

- ~ March 2008 meeting with patient and consumer advocates from across the country
- ~ Discussed primary care
- ~ Key themes emerged
 - Power of putting patients at the center of policy

Patient-Centered Primary Care

Patients Value—

- ~ Health care providers who “know” them
- ~ Help with condition and treatment
- ~ Access 24/7, different avenues
- ~ Good communication, cultural competency
- ~ Help with decisions about care and seeing specialists

Patient-Centered Primary Care

Strategies:

- ~ System redesign to facilitate:
 - Care coordination, communication, access, etc.

- ~ Tools that help patients & providers realize the vision of “partnership”
 - Provider training and tools
 - Patient empowerment training
 - Shared decision-making

Patient-Centered Primary Care

View from the Field: Minnesota

- ~ Health Care Home legislation -- May 2008
- ~ Calls for certification of “health care homes” and care coordination payments (statute 256B.0751)
- ~ Advocate role

Patient Experience Surveys

Meet Patients Where They Are

Patient Experience Surveys

Strategies:

- ~ Include the collection of patient experience data in measurement and reporting initiatives and projects that aim to improve care delivery, care coordination, and outcomes
- ~ Communicate to consumers and patients the importance of actively participating in patient experience surveys

Patient-Experience Surveys

View from the Field: MN, KS, TN

- ~ Minnesota—pilot, funded by physician practices, www.mnhealthscores.org
- ~ Consumers' CHECKBOOK sponsored the surveys in Kansas City and Memphis

Information & Benefit Design

System wants engaged consumers but hasn't provided the tools or the incentives:

- ~ Long, technical performance reports
- ~ Few incentives to seek out information or high performing health care providers

Information & Benefit Design

Strategy I: *Better Reports*

- ~ Use meaningful measures
- ~ Clearly define quality care
- ~ Ensure true differentiation among providers
- ~ Provide cost & quality information together
- ~ Rank providers by performance, include a summary
- ~ Use symbols, avoid medical terminology, statistics, lots of caveats

Information & Benefit Design

Strategy II: Better Benefit Design

- ~ Consumers need incentives to make value-based decisions
- ~ Better benefit design can improve health outcomes and lower costs

Information & Benefit Design

View from the Field: Maine and Puget Sound

Conclusion

- ~ How can consumers be better equipped and engaged as positive forces for higher value care?
- ~ What additional information is needed to order to maximize the potential of consumer engagement?

thank you
