Study of Asthma Phenotypes and Pharmacogenomic Interactions by Race-ethnicity (SAPPHIRE)

- 7,642 participants from the Detroit metropolitan area
  - 4,560 AAs
  - 2,349 EAs
  - 242 Latinos
- 6,170 with asthma and 1,472 controls
- Longitudinal follow-up on most patients via health plan participation
Differences in Asthma Controller Adherence among Covered Patients

Inhaled corticosteroid adherence (% of prescribed dose taken)

A. Heighted risk for non-traumatic fracture (HR 1.52) among diabetic women taking TZDs (solid line) vs. no TZD.

B. Reduced risk for asthma exacerbations at therapeutic doses among individuals taking ICS/LABA combination (dashed line) vs. ICS alone (solid line).

C. Greater glycated hemoglobin reduction with metformin among African American individuals vs. Europe American individuals.
