Disclaimer

I am an employee of the U.S. Government. This work was prepared as part of my official duties. Title 17, U.S.C. §105 provides that copyright protection under this title is not available for any work of the U.S. Government. Title 17, U.S.C. §101 defines a U.S. Government work as work prepared by a military service member or employee of the U.S. Government as part of that person’s official duties.

This work was supported by the Military Operational Medicine Research Program, the Defense Health Program, and the Department of Veterans Affairs under work unit no. 60002. The views expressed in this research are those of the authors and do not necessarily reflect the official policy or position of the Department of the Navy, Department of Defense, nor the U.S. Government.

The study protocol was approved by the Naval Health Research Center Institutional Review Board in compliance with all applicable Federal regulations governing the protection of human subjects. Research data were derived from an approved Naval Health Research Center, Institutional Review Board protocol number NHRC.2000.0007.
Study Origin

• 1998: Department of Defense (DoD), Armed Forces Epidemiological Board, Department of Veterans Affairs (VA), and Institute of Medicine recommended a coordinated prospective longitudinal cohort study of service members
  – Newly available DoD surveillance and electronic health care data

• 1999 National Defense Authorization Act
  – Sect. 743: Establish “a longitudinal study to evaluate data on the health conditions of members of the armed forces upon their return from deployment”
  – NHRC designated as the DoD Center for Deployment Health Research
### Study Objective and Methodology

Prospectively determine the impacts of military deployments, experiences, and exposures on the long-term health of Service members and Veterans

<table>
<thead>
<tr>
<th>Multiple-panel cohort study of all Services and Components (n=201,620)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Follow-up every 3-5 years through 2068</td>

Complementary Data
Respiratory Outcomes

• Self-reported physician-diagnosed
  – Asthma
  – Chronic bronchitis
  – Emphysema

• Baseline: “Has your doctor or other health care professional ever told you that you have [condition]?”

• Follow-up: “In the last 3 years, has your doctor or other health care professional told you that you have [condition]?”

• Also assessed persistent or recurring cough or shortness of breath
Deployment Status

• Contingency Tracking System
  – Country of deployment
  – In- and out-of-theater dates
  – Maintained by Defense Manpower Data Center (DMDC)

• CLASSIFIED: Within-country deployment locations
### Adjusted Odds Ratios (AORs) of Self-Reported New-Onset Respiratory Outcomes, Deployers vs. Non-Deployers

<table>
<thead>
<tr>
<th>Service branch (n)</th>
<th>Respiratory symptoms* AOR (95% CI)</th>
<th>Chronic bronchitis or emphysema AOR (95% CI)</th>
<th>Asthma AOR (95% CI)</th>
</tr>

<td>0.56 (0.15–1.98)</td>
</tr>
</tbody>
</table>

CI, confidence interval.
Combat Exposure

- Participants were asked if they had been personally exposed to (in the last 3 years):
  - Witnessing a person’s death due to war, disaster, or tragic event
  - Witnessing physical abuse (torture, beating, or rape)
  - Dead and/or decomposing bodies
  - Maimed soldiers or civilians
  - Prisoners of war or refugees

- Note: Surveys included 13-item combat measure on 2007 survey
Combat Deployment and Incident Asthma Risk

- N = 75,770
- Incident cases ascertained through 2013
- Among deployers, no association between asthma risk and multiple deployments and deployment duration

Burn Pit Proximity and Respiratory Health

• 2010: Office of the Assistant Secretary of Defense for Health Affairs requested MilCo Study to examine whether exposure to burn pit smoke was associated with long-term respiratory outcomes

• DMDC identified personnel deployed within 3 and 5 miles of 3 documented burn pits in Iraq between 2003–2008
  – Joint Base Balad, Camp Taji, Camp Speicher
  – MilCo Panels 1–2, Army or Air Force:
    • Approx. 22,300 deployed
    • Approx. 3,500 deployed within 3 miles of burn pit site

• Final report: No associations with incident asthma, chronic bronchitis or emphysema, or respiratory symptoms

Burn Pit Proximity and Respiratory Health

- Government Accountability Office reports
  - 2016 (GAO-16-781): DoD has yet to comprehensively assess the health effects of burn pit exposures
  - 2018 (GAO-18-596T): Improved monitoring of burn pit emissions and examination of health effects related to burn pit exposure

- 2017: ASD(HA) requested updated analysis with extended follow-up
  - Exposure period: July 2003–April 2009
  - Briefed to ASD(HA) and presented at Military Health System Research Symposium abstract submitted, manuscript in preparation
Current Projects

- Deployment, comorbidities, and long-term respiratory health (USU-led, manuscript in preparation)
- Deployment and risk of chronic obstructive pulmonary disease (analyses underway)
- Exertional dyspnea among active duty personnel (analyses underway)
- Molecular indicators of burn pit exposure (protocol pending)
**Burn Pit Biomarkers Study**

- Defense Health Program-funded study
  - Co-PI: Dr. Aarti Gautam, Integrative Systems Biology Program, WRAIR

- Longitudinal analysis of serum collected pre- and post-deployment in relation to burn pit proximity

<table>
<thead>
<tr>
<th>miRNA expression (epigenetic changes)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metabolites of incomplete combustion byproducts</td>
</tr>
<tr>
<td>• Polycyclic aromatic hydrocarbons (PAHs)</td>
</tr>
<tr>
<td>• Polychlorinated dibenzo[dioxins]/furans (PCDD/Fs)</td>
</tr>
</tbody>
</table>

- Examine associations between burn pit proximity, exposure biomarkers, tobacco use (self-reported, serum cotinine), and adverse respiratory outcomes
Considerations and Future Directions

• Analyses relied on self-reported outcomes
  – Military medical records only cover active duty and activated reservist service time
  – VA medical records will be linked to survey data

• Anticipated release of DoD/VA Individual Longitudinal Exposure Record (ILER)
  – Pending declassification of OIF/OEF deployment locations/dates

• Focus on specific occupations

• Focus on smoking as a potential effect modifier of deployment-related environmental exposures

• 2019 survey will include items on frequency and severity of asthma symptoms
