

Health Care Expenditure Collaborative

MISSION & ROSTER

Mission

A 2012 Institute of Medicine report recommended that the Secretary of HHS set targets for life expectancy and per capita health (care) expenditure to bring the United States in line with the average among peer nations (per data from the Organisation for Economic Co-operation and Development, OECD). A decade later, the US standing in life expectancy and health care spending has not improved. The Health Care Expenditure Collaborative is facilitating an ongoing dialogue and analysis about what is needed to change the current state.

Roster
