

Toward a 21st Century National Data Infrastructure: Enhancing Survey Programs by Using Multiple Data Sources

Monday, April 24, 2023

3:00 – 4:30 pm EDT

- 3:00 **Welcome, Introductions**
Melissa Chiu, Director, CNSTAT
- 3:05 **Overview of *Toward a 21st Century National Data Infrastructure: Enhancing Survey Programs by Using Multiple Data Sources***
Sharon Lohr, Arizona State University (Emerita)
- 3:35 **Using Multiple Data Sources to Enhance Data Equity**
Kimberlyn Leary, Harvard Medical School
- 3:50 **Creating New Data Resources with Administrative Records**
David Mancuso, Washington State Department of Social and Health Services
- 4:05 **Q&A**
Melissa Chiu, Moderator
- 4:30 **Adjourn**

Abstract

This webinar will focus on the recently released consensus report *Toward a 21st Century National Data Infrastructure: Enhancing Survey Programs by Using Multiple Data Sources*. This is the second report in a series funded by the National Science Foundation. The report discusses how the use of multiple data sources can improve the quality of national and subnational statistics while promoting data equity. It explores implications of combining survey data with other data sources through examples relating to the areas of income, health, crime, and agriculture. Presentations by the chair and members of the consensus panel will highlight key messages from the report.
