1. *What are the most important things that must happen to develop a consensus vision for a new national data infrastructure for federal statistics and research that uses private sector data?*
Comments:

2. *What do you see as the single biggest obstacle currently to using private sector data?*
Comments:

3. *What must change in the federal statistical system to realize the power of data sharing?*
Comments:

4. *From your perspective, what are the keys to successfully integrating private sector data into official statistics?*
Comments:

5. *What benefits, incentives, or services could the government data sector offer private sector companies that would encourage them to share their data to improve national statistics?*
Comments:

6. *What special challenges do private sector data pose for statistical agencies? What ideas do you have regarding how best to address these issues?*

Comments:

7. *Other comments or suggestions related to envisioning a New Data Infrastructure for Federal Statistics and Social and Economic Research in the 21st Century.*
