# **Using Private-Sector Health Data**

### Key Attributes of a Data Infrastructure

- Capacity
- Consistency
- Sustainability

#### NCHS Initiatives

- Electronic Health Records
- Data Linkage/Social Determents of Health
- Vital Statistics

# **Electronic Health Records (EHRs)**

### Opportunities

- Single repository for multiple uses
- Reduced burden on healthcare providers
- Higher-quality and more timely statistics

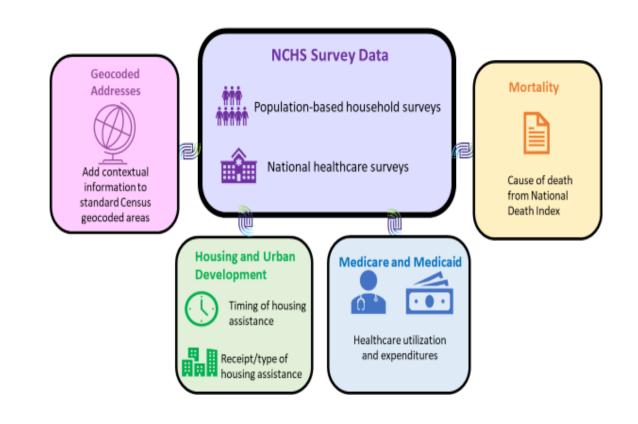

## Challenges

- Significant storage and processing costs
- Lack of common/consistent data standards
- Privacy concerns
- Acquisition hurdles

## **NCHS Data Linkage Program**

- Linked data provide policyrelevant information in an efficient way
- NCHS links many of its surveys to administrative & private data sources
- Geocodes are often included

# **Social Determinants of Health (SDOH)**

- Expanded data sources and linkage to examine SDOH
  - Conduct new and updated linkages, including private data
  - Improve privacy protections for linked data—e.g., Privacy
     Preserving Record Linkage
- Integrated SDOH data for cross-government evidencebuilding efforts
