

Issues regarding data reanalysis for actionable variants

Geisinger

Natasha Strande, PhD, DABMGG, FACMG

Assistant Professor

Dept. Genomic Health and Autism &
Developmental Medicine Institute

Clinical Laboratory Director, MyCode

Outline

- Review variant and gene classification schemes and evolution
- Rate of variant re-classification over time
- MyCode reanalysis experience with updating gene lists
- Policies regarding reanalysis

Continued Gene Discovery

Gene Disease Validity

GENE/DISEASE PAIR:				
Assertion criteria	Genetic Evidence (0-12 points)	Experimental Evidence (0-6 points)	Total Points (0-18)	Replication Over Time (Y/N)
Description	Case-level, family segregation, or case-control data that support the gene-disease association	Gene-level experimental evidence that support the gene-disease association	Sum of Genetic & Experimental Evidence	> 2 pubs w/ convincing evidence over time (>3 yrs.)
Assigned Points	A	B	C	D
CALCULATED CLASSIFICATION		LIMITED	0.1-6	
		MODERATE	7-11	
		STRONG	12-18	
		DEFINITIVE	12-18 & Replicated Over Time	
Valid contradictory evidence (Y/N)*	List PMIDs and describe evidence: E			
CURATOR CLASSIFICATION		F		
FINAL CLASSIFICATION		G		

Strande & Riggs et al., 2017; PMID: 28552198

Gene-Disease Clinical Validity Statistics

The ClinGen Gene-Disease Clinical Validity curation process involves evaluating the strength of evidence supporting or refuting a claim that variation in a particular gene causes a particular disease.

Classification Statistics

Gene-Disease Clinical Validity has **1924 curations** encompassing **1586 genes**.

Directionality of Changes

Table 1 Summary of classification and reclassification from ClinVar (Jan 2016–July 2019)

Starting classification (n)	Percentage reclassified (n)	Reclassification type (n)	Percentage of initial classification group	Percentage of all reclassifications
Pathogenic (63,658)	0.17% (110)	P → LP (64)	58.2%	1.4%
		P → VUS (41)	37.3%	0.91%
		P → LB (1)	0.91%	0.02%
		P → B (4)	3.6%	0.09%
Likely pathogenic (36,808)	2.16% (796)	LP → P (625)	78.5%	13.9%
		LP → VUS (165)	20.7%	3.7%
		LP → LB (4)	0.50%	0.09%
		LP → B (2)	0.25%	0.04%
Uncertain significance (272,581)	0.95% (2584)	VUS → P (171)	6.6%	3.8%
		VUS → LP (486)	18.8%	10.8%
		VUS → LB (1586)	61.4%	35.2%
		VUS → B (341)	13.2%	7.6%
Likely benign (140,779)	0.71% (996)	LB → P (2)	0.20%	0.04%
		LB → LP (2)	0.20%	0.04%
		LB → VUS (66)	6.6%	1.5%
		LB → B (926)	93.0%	20.6%
Benign (58,024)	0.03% (15)	B → P (1)	6.7%	0.02%
		B → LP (3)	20.0%	0.07%
		B → VUS (1)	6.7%	0.02%
		B → LB (10)	66.7%	0.22%

Abbreviations: B Benign, LB Likely benign, LP Likely pathogenic, P Pathogenic, VUS Variant of uncertain significance

Harrison and Rehm, 2019; PMID: 31752965

Table 1 Number of *BRCA1/2* variants that AMDL had submitted to ClinVar for which there were discordant submissions

Number of variants with discordant ClinVar submissions (total <i>n</i> = 488)	
Discrepancy across two ACMG/AMP levels	
Likely Benign/Benign	14.8% (72/488)
Likely Pathogenic/Pathogenic	9.2% (45/488)
Discrepancy across three ACMG/AMP levels	
Benign/Likely Benign/VUS	68.6% (335/488)
Pathogenic/Likely Pathogenic/VUS	6.1% (30/488)
Discrepancy across five ACMG/AMP levels	
Pathogenic/VUS/Likely Benign/Benign	0.6% (3/488)
Different classification system	
Pathogenic/Risk Factor	0.6% (3/488)

ACMG/AMP American College of Medical Genetics and Genomics/Association for Molecular Pathology, ADML Advanced Molecular Diagnostics Laboratory, VUS variant of uncertain significance.

Experiences from Geisinger's MyCode Biobank

Geisinger

- Integrated healthcare system in Central and Northeast Pennsylvania
- Large, stable population of >3M patients, including many multi-generation families
- Longstanding EHR with comprehensive clinical data
- Strong, trusting relationship between patients and Geisinger

PENNSYLVANIA

MyCode Timeline

1. MyCode Community Health Initiative is a **precision medicine research project** at Geisinger
2. Includes a system-wide **biobank** designed to store blood and other samples for research use by Geisinger and Geisinger collaborators

Newly Added SF v3.0 Genes

Cancer

Hereditary breast and ovarian cancer:
*BRCA1/2, **PALB2***

Lynch syndrome:
MLH1, MSH2, MSH6, PMS2

Familial Adenomatous Polyposis: *APC*

Endocrine tumor syndromes:
6 genes + **MAX** & **TMEM127** for
pheochromocytoma & paragangliomas
+ 10 other cancer conditions

Cardiovascular

Vasculopathies: 7 genes

Cardiomyopathies
(HCM, DCM, ARVC):
16 genes + **FLNC**, **TTN** for DCM

Inherited arrhythmias:
4 genes + **CASQ2** & **TRDN** (AR) for CPVT

Familial hypercholesterolemia: *APOB*,
LDLR, & *PCSK9*

Miscellaneous

Malignant hyperthermia: *RYR1* & *CACNA1S*

Wilson disease (AR): *ATP7B*

Hemochromatosis: *HFE* C282Y homozygotes

Hereditary Hemorrhagic telangiectasia:
SMAD4, **ACVRL1** & **ENG**

MODY: **HNF1A**

Retinopathy (AR): **RPE65**

Metabolic

Ornithine transcarbamylase deficiency: *OTC*

Fabry Disease (XL): *GLA*

Biotinidase deficiency (AR): **BTBD**

Pompe Disease (AR): **GAA**

Screening Approach

Ornithine transcarbamylase deficiency: *OTC*

Fabry Disease (XL): *GLA*

Biotinidase deficiency (AR): ***BTBD***

Pompe Disease (AR): ***GAA***

Policies Regarding Reanalysis

Points to consider in the reevaluation and reanalysis of genomic test results: a statement of the American College of Medical Genetics and Genomics (ACMG)

Joshua L. Deignan, PhD¹, Wendy K. Chung, MD, PhD², Hutton M. Kearney, PhD³,
Kristin G. Monaghan, PhD⁴, Catherine W. Rehder, PhD⁵ and
Elizabeth C. Chao, MD⁶; on behalf of the ACMG Laboratory Quality Assurance Committee

Molecular Diagnosis & Therapy (2021) 25:529–536
<https://doi.org/10.1007/s40291-021-00541-7>

CURRENT OPINION

Clinical Exome Reanalysis: Current Practice and Beyond

Jianling Ji^{1,2} · Marco L. Leung^{3,4} · Samuel Baker⁵ · Joshua L. Deignan⁶ · Avni Santani^{7,8}

Reclassification of clinically-detected sequence variants: Framework for genetic clinicians and clinical scientists by CanVIG-UK (Cancer Variant Interpretation Group UK)

ACMG Points to Consider

- Policies needed to address how reanalysis will be handled
 - *Variant-level reevaluation* -interrogation and potential reclassification of previously reported variants.
 - *Case-level reanalysis* - involves the review of all variants in an exome or genome, both reported and unreported.
- Respond to external requests for reanalysis
- Reports should clearly state the possibility of variant classification changes over time

Summary

- Evolving list of actionable genes/conditions (v2 to v3 = 35% increase)
- Frequency of changes in variant classifications varies (6.4% – 15%)
- Multiple reasons for reclassifications
