WORKSHOP

Publishing in the Age of Open Science: Workshop for Researchers, Institutions, and Publishers

February 21, 2024 | 9:00am – 5:00pm ET

February 22, 2024 | 9:00am – 12:00pm ET

ABOUT

Feeling overwhelmed by Open Access (OA) and FAIR data? The complex OA landscape presents a resource conundrum for researchers, institutions, and publishers. Public access mandates aim to democratize knowledge and promote innovation. However, the viability of current OA business models raises concerns about research equity, knowledge generation, and affordability. At the same time, chemists also need dedicated domain repositories for research data to comply with FAIR (Findability, Accessibility, Interoperability, and Reproducibility) Principles. Navigating this intricate landscape demands an intentional approach that ensures the dissemination, financial sustainability, and scientific integrity of chemistry research. Don't get lost in the Public Access and OA labyrinth, take control of your research future with this insightful workshop hosted by the National Academies' Chemical Sciences Roundtable (CSR)!
