

Acoustics and Environment in the Energy Industry

Dr. Alex Loureiro, Scientific Director

Founded in 1971, the EnerGeo Alliance is the global trade alliance for the energy geoscience industry, the intersection where earth science and energy meet. We represent the geoscience companies, innovators, and energy developers that use earth science to discover, develop and deliver mainstay sources of energy, alternative energy, and low-carbon energy solutions to meet our growing world's needs.

EnerGeo is a trusted advisor to its membership and governments, providing reliable science- and data-based government advocacy, credible resources and expertise, future-focused leadership, and driving leading standards and best performance in health, safety, environment and efficiency. Together, we empower the access needed to energize the world.

Energy Starts HereTM

How geoscience makes reliable energy possible

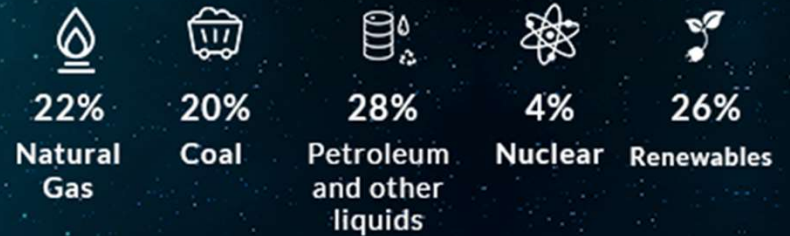

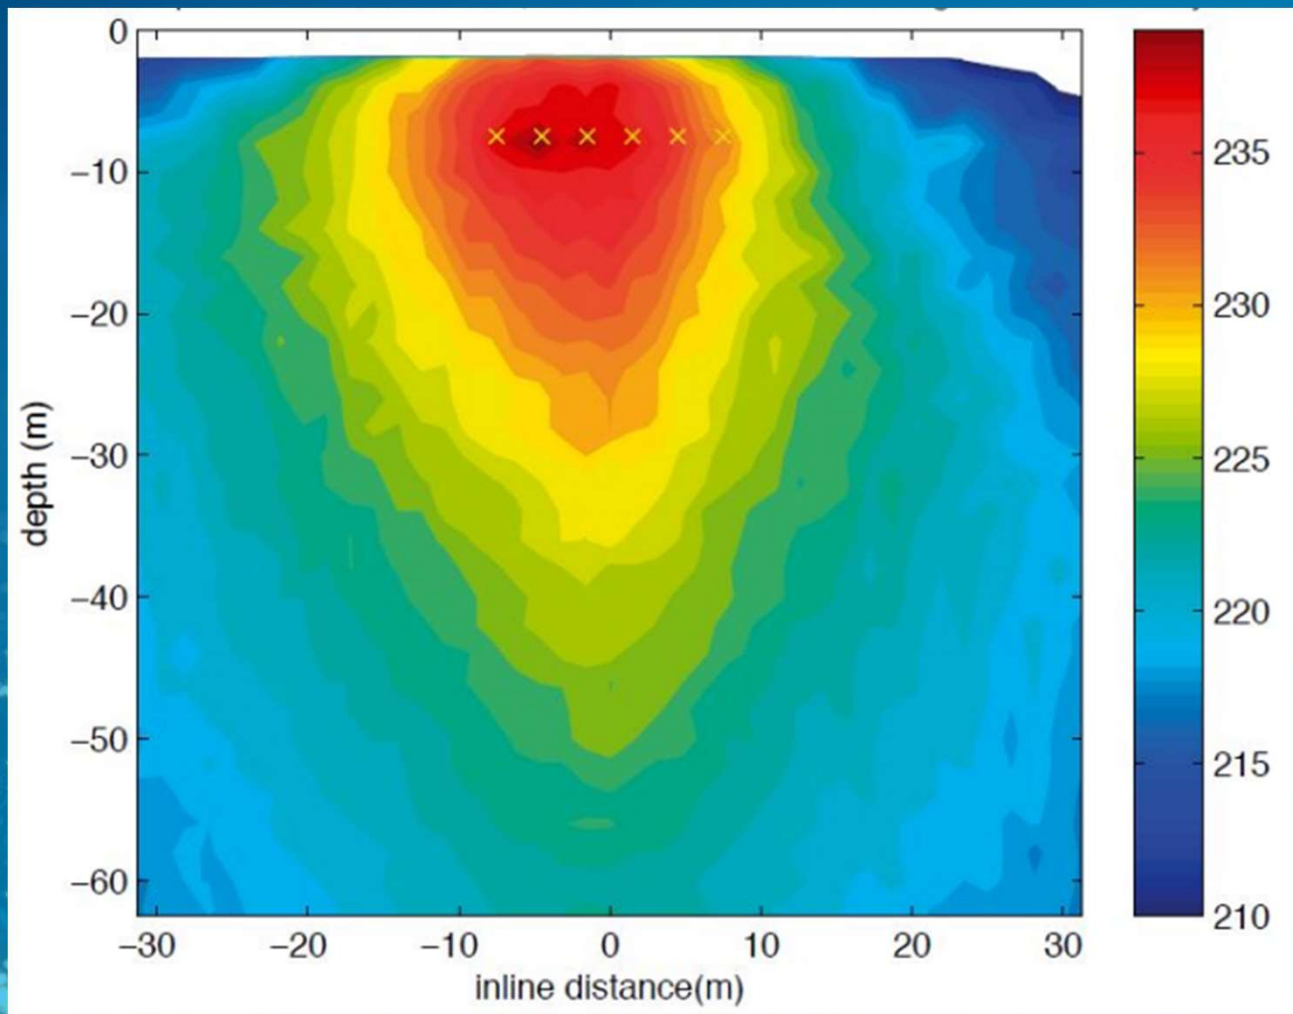

A balanced energy mix ensures that the growing global population has access to reliable and safe energy.

By 2050

World population will increase to 9.7 billion.
Total energy use is expected to increase 50%.

Projected energy mix to meet this demand:

Cetacean Auditory Weighting Functions
