An aerial satellite image of a coastal region, likely the Mississippi River delta. The image shows a complex network of waterways, including a large river that branches into many smaller channels and distributaries. The surrounding land is a mix of green, indicating vegetation, and brownish/tan areas, possibly representing urban development or cleared land. The water is a deep blue, contrasting with the lighter colors of the land. The overall scene depicts a dynamic and interconnected coastal ecosystem.

# SETS: Social – Environmental – Technology Systems

1. ***“As society’s energy flow increases, it has become more and more influential on the design of ecosystems, and it becomes more and more necessary that society provide a reasonable system coupling nature with it’s culture.” (HT Odum, 1974 –‘The Network Nightmare’).***
- (2) ***To design is to devise courses of action aimed at changing existing situations into preferred ones. (Herbert Simon)***

## **Concept of Ecosystem Design**

- Integrating ecosystem design elements using a design process that provides value to both natural and social systems using natural, nature-based and built infrastructure that promotes social well being.
- The “design process” carries the connotations of intention, precision, and preference.

## Coastal Systems Ecology & Ecosystem Design - OCS 2050

This is the first course in a series of requirements in the proposed Delta Research Minor.

**All students are eligible to take this class!**

Fundamental principles of systems ecology to instruct "systems thinking" linking natural and built infrastructure, processes, and ecosystem dynamics with focus on deltaic coasts; creating innovative methods to frame the complexity of designing more resilient coastal ecosystems (ecosystem design).

## Coastal Sustainability Studio 2022 Summer Internship Program

**WHO:** Graduate students and undergraduate seniors from a range of disciplines (see program description):

**HOW:** To apply, please email no later than March 15, 2022, the following to [sandyparfait@lsu.edu](mailto:sandyparfait@lsu.edu):

- 2-page Letter of Interest outlining who you are and why you're interested in this Summer Internship.
- Resume demonstrating performance in your area of study. Descriptions may include three Engineering

Situated at the intersection of the Mississippi River and the Gulf of Mexico, the Louisiana coast is one of the most complex, and culturally rich environments in the world. The coast is also one of the most vulnerable. The Mississippi River watershed is the largest in the world, draining over 40% of the United States. The coast, which is vulnerable to climate change. Additionally, The region faces environmental issues. The coast faces challenges that require multi-disciplinary collaboration.

The development of the Louisiana coast is a complex process that involves economic and social values for the coastal and riverine communities around the world. The coast's geology and geography, Louisiana is a living laboratory for design, innovative planning, and community collaboration.

Through trans-disciplinary approaches, the LSU Coastal Sustainability Studio (CSS) and Center for Coastal Resiliency (CCR) engage scientists, engineers, and designers to study settlement, coastal restoration, flood protection, and economic development to develop innovative solutions for coastal communities. This focus on ecosystem design provides a sound basis to build adaptation into sustainable land-use planning, coastal protection, and education.

The LSU Coastal Sustainability Studio and Center for Coastal Resiliency will host a 2022 summer internship program in their highly collaborative, interdisciplinary studio environment situated at the Water Campus in Baton Rouge. Qualified candidates with interests as varied as geoscience, systems ecology, civil & environmental engineering, architecture, landscape architecture, geography, social sciences, environmental law & policy, resource economics, and community planning are invited to apply. Projects will address tasks associated with two research projects that embrace the 'Engineering with Nature' initiative within U.S. Army Corps of Engineers. Students will work with university researchers to develop ecosystem design approaches to solve challenges of living and working in dynamic coastal landscapes.

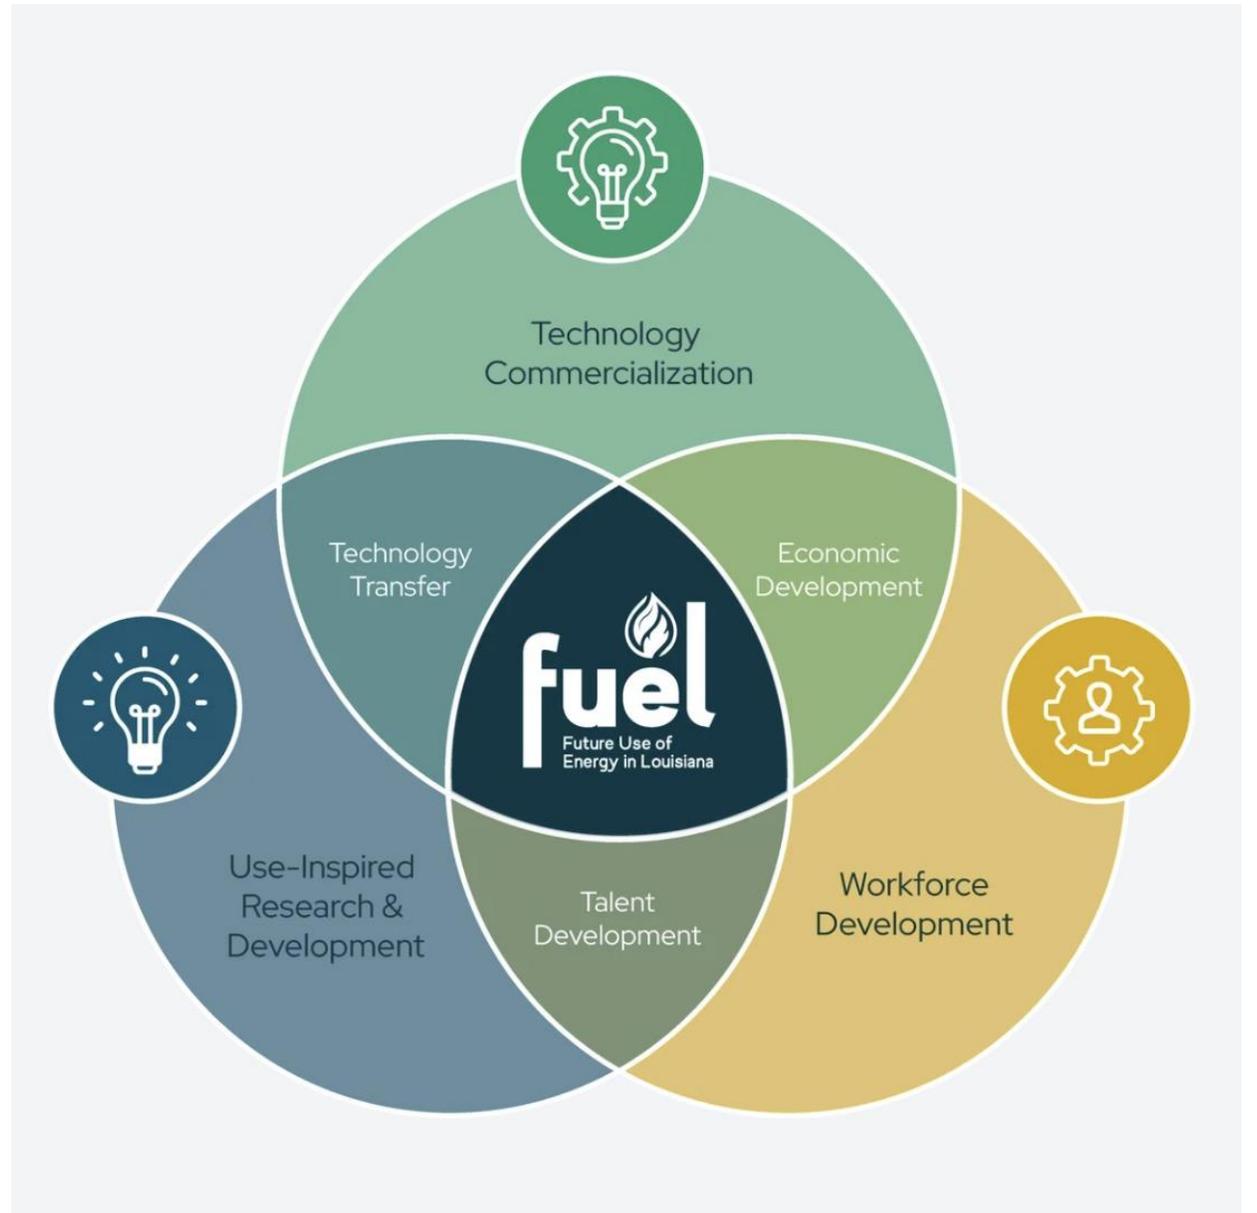

5. Develop Training that Integrates Design Approaches

# fuel

Future Use of Energy in Louisiana

LSU

## **USE-INSPIRED RESEARCH AND DEVELOPMENT**

**Enabling initial discoveries with the needs of industry and Louisiana in mind**

FUEL aims to grow collaboration across various industries, fostering faster and more extensive use-inspired research and development for innovative carbon management in Louisiana and across the globe. FUEL will serve as an engine for the generation of new ideas, projects, and knowledge by bringing together experts across disciplines.

## **WORKFORCE DEVELOPMENT**

**Developing and attracting talent for entrepreneurship that creates jobs**

At all levels, FUEL will support the creation and implementation of workforce development programs that cultivate a diverse, skilled, and adaptable workforce that is prepared to support and share in the benefits of the energy transition.

## **TECHNOLOGY COMMERCIALIZATION**

**Converting research into commercial applications and practical solutions**

FUEL helps turn research into practical innovation by establishing a strong foundation for continuous collaboration and skill development. FUEL will use diverse strategies, including a comprehensive incubator, to provide extensive training in commercialization and entrepreneurship, fostering broad and impactful outcomes.
