The National Academies of Sciences, Engineering, and Medicine committee on “*Accelerating Decarbonization in the United States: Technology, Policy, and Societal Dimensions*” has been tasked to assess a wide spectrum of technological, policy, and social dimensions of decarbonizing the U.S. economy. This three-part webinar series seeks to learn from government, non-profit, and philanthropic sector perspectives and lessons learned thus far to accelerate the just energy transition. The webinar series will focus on and answer critical questions:

1. What critical roles do philanthropic organizations play in a just energy transition?
2. What principles, frameworks, strategies, and/or policies are being leveraged or implemented by philanthropic organizations to achieve a just energy transition?
3. What could/should philanthropic organizations do to address past inequities and avoid future inequities?
4. What are examples of just energy transition failures and successes we can learn from?
5. What stakeholders are being engaged in the just energy transition? How? Who needs to be engaged?

Additional details on the full study can be found here:
