

# TB ELIMINATION IN THE TIME OF COVID-19

SALMAAN KESHAVJEE, MD, PhD, ScM

PROFESSOR OF GLOBAL HEALTH AND SOCIAL MEDICINE  
DIRECTOR, CENTER FOR GLOBAL HEALTH DELIVERY  
HARVARD MEDICAL SCHOOL

WORKSHOP:

“Innovations for tackling tuberculosis  
in the time of COVID-19”

National Academies of Sciences, Engineering and Medicine  
(VIA ZOOM)  
July 22, 2021

IN 2018, AN ESTIMATED

**10 MILLION PEOPLE FELL ILL WITH TB\***

7 MILLION PEOPLE REPORTED  
TO HAVE ACCESS TO TB CARE, UP  
FROM 6.4 MILLION IN 2017

3 MILLION WERE  
UNDIAGNOSED  
OR NOT REPORTED

**3 million  
undiagnosed**

\*The 95% uncertainty interval for TB incidence is 9.0-11.1 million.

IN 2018

**1.5 MILLION\*  
PEOPLE DIED  
FROM TB**

INCLUDING  
231 000 PEOPLE  
WITH HIV

**5,000+  
people dead  
every day**

# HOW FAR ARE WE FROM ACHIEVING OUR TB ELIMINATION GOALS?

TB is a leading killer of people with HIV and  
a major cause of deaths related to antimicrobial resistance

\*The 95% uncertainty intervals are 1.4-1.6 million for TB deaths and 223 000 - 281 000 for TB/HIV deaths.

IN 2018

**ABOUT 0.5 MILLION  
PEOPLE FELL ILL WITH  
DRUG-RESISTANT TB\***

ONLY **ONE IN THREE**  
**PEOPLE HAD**  
**ACCESSED TREATMENT**

**<20%  
DR-TB  
patients  
cured**

OF THOSE TREATED, ONLY  
**56% WERE TREATED SUCCESSFULLY**

\*The 95% uncertainty interval for the incidence of rifampicin-resistant TB is 420 000 - 560 000.  
About 80% of these cases had multidrug-resistant TB.

## A) SDGs AND END TB STRATEGY: TARGETS

TB INCIDENCE

TARGET:  
**20%**  
REDUCTION  
2015-2020

TB DEATHS

% OF PEOPLE WITH TB FACING CATASTROPHIC COSTS

**2006 to 2016:**

**DS-TB *declined* 1.3%  
per annum**

**MDR-TB *declined*  
2.1% per annum**

**XDR-TB *increased*  
7.9% per annum**

Source: *Lancet ID*, 2018

**GLOBALLY**

policy and program  
officers reported  
significant drops  
in TB notification

**During COVID-19**

**70%**

of officers from  
Global Fund  
implementing  
countries reported a  
**DECREASE** in the  
number of people with  
TB receiving treatment

GFIC=Global Fund Implementing countries

Source: Stop TB Partnership, Impact of Covid-19 on the TB epidemic, 2021

**49%**  
OF PEOPLE  
WITH TB FACE  
CATASTROPHIC  
COSTS

B) UN HIGH-LEVEL MEETING

TB TREATMENT

TARGET:  
**40**  
MILLION  
2018-2022

# IS TB ELIMINATION POSSIBLE?

**YES.**

TB ELIMINATION CAN BE ACHIEVED USING THE  
**SEARCH-TREAT-PREVENT** EPIDEMIC CONTROL STRATEGY  
THAT HAS EXISTED SINCE THE EARLY 1960s

**WE HAVE YET TO IMPLEMENT THAT STRATEGY GLOBALLY**

1

# SEARCH for people with TB disease and infection

**Active case finding using a sensitive diagnostic (x-ray) was a critical tool for finding active cases and stopping transmission of TB**

→ **Early case detection led to lower mortality**

Source: Golub et al. 2005

**Tools to confirm TB disease and drug-susceptibility**

**Tools to confirm TB Infection**

## **2 TREAT TB disease correctly**

**USING THE CORRECT MEDICINES WITH  
LEAST SIDE EFFECTS OVER THE  
SHORTEST PERIOD OF TIME**

# GLOBAL PROGRESS IN THE NUMBER OF PEOPLE TREATED FOR TB IN 2018 AND 2019 LAGS BEHIND

WHAT IS NEEDED TO REACH THE UN GLOBAL TARGETS, ESPECIALLY FOR DRUG-RESISTANT TB

## TB TREATMENT (ALL AGES)

TARGET:  
**40**  
MILLION  
2018-2022

**14.1 million**  
(35%)

TREATED IN  
2018 & 2019

## TB TREATMENT (CHILDREN)

TARGET:  
**3.5**  
MILLION  
2018-2022

**1.04 million**  
(30%)

TREATED IN  
2018 & 2019

## MDR/RR-TB TREATMENT (ALL AGES)

TARGET:  
**1.5**  
MILLION  
2018-2022

**333 000**  
(22%)

TREATED IN  
2018 & 2019

## MDR/RR - TB TREATMENT IN CHILDREN

TARGET:  
**115 000**  
2018-2022

**9 000**  
(7.8%)

TREATED IN  
2018 & 2019

## Opportunities:

- Short course regimen for DS-TB
- All oral regimens for DR-TB
- Patient supports that include food and cash transfers

World Health  
Organization

3

**PREVENT**  
**TB infection**  
**from becoming**  
**active disease**

**TREATING TB IS AN**  
**ESSENTIAL PART OF**  
**STOPPING TRANSMISSION**  
**AND DISEASE**

# Preventive therapy and the decline in TB transmission in Alaska

Between 1950 and 1960, the US Public Health Service built health facilities, started **active case finding**, **treatment of all forms of disease**, and **treatment of TB infection**

Kaplan, Fraser, and Comstock. Am Rev Resp Crit Care. 1972

Granuloma formation (informed by Canetti's seminal studies and progression coupled with outcome of *M. tuberculosis* infection).

Source: Cadena, Flynn & Fortune, *mBio*, 2016

**~8 to 10% of contacts will get TB during the first two years after exposure to an individual with active disease**

**~20-30 million contacts a year should receive treatment**

# Infection/transmission Control

1. Respirators
2. Ventilation
3. Upper room UV-C germicidal lighting

# GLOBAL PROGRESS IN PROVISION OF TB PREVENTIVE TREATMENT LAGS BEHIND

WHAT IS NEEDED TO REACH THE OVERALL UN GLOBAL TARGET

## TB PREVENTIVE TREATMENT (ALL AGES)

TARGET:  
**30**  
MILLION  
2018-2022

**6.3 million**  
(21%)

TREATED IN  
2018 & 2019

## PEOPLE LIVING WITH HIV

TARGET:  
**6**  
MILLION  
2018-2022

**5.3 million**  
(88%)

TREATED IN  
2018 & 2019

## HOUSEHOLD CONTACTS AGED < 5 YEARS

TARGET:  
**4**  
MILLION  
2018-2022

**783 000**  
(20%)

TREATED IN  
2018 & 2019

## HOUSEHOLD CONTACTS AGED ≥ 5 YEARS

TARGET:  
**20**  
MILLION  
2018-2022

**179 000**  
(<1%)

TREATED IN  
2018 & 2019

## Opportunities:

- Short course preventive regimens for DS-TB (1HP; 3HP)
- Regimens for MDR-TB and XDR-TB

World Health  
Organization

## Alaska, United States of America

Figure 1. Alaska and the United States TB Incidence Rates, 1952–2016

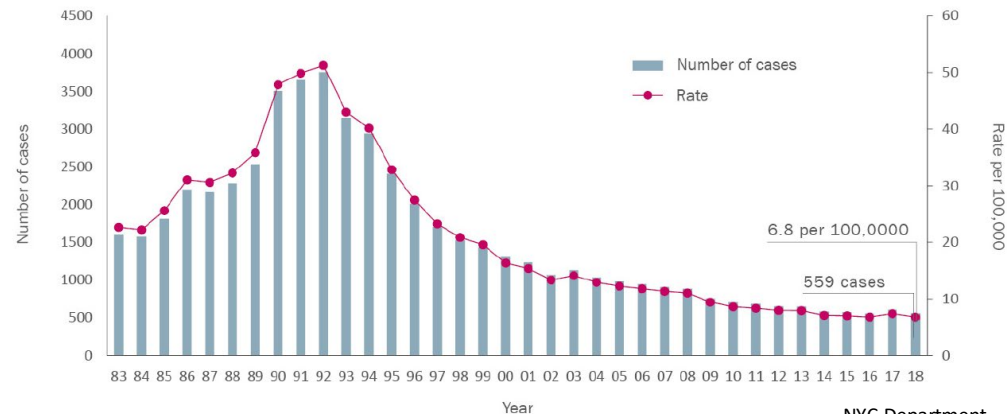

WHAT CAN  
SEARCH-  
TREAT-  
PREVENT  
ACHIEVE?

FASTER  
PROGRESS  
TOWARDS  
TB ELIMINATION

## NYC, United States of America

### 1983-1992:

Overall increase: **134%**  
Average annual increase: **11%**

### 1992-2003:

Overall decrease: **70%**  
Average annual decrease: **10%**

### 2003-2018:

Overall decrease: **51%**  
Average annual decrease: **4%**

NYC Department  
of Health

In **Tomsk, Russia**, a comprehensive strategy was used to rapidly reduce TB incidence

# KARACHI, PAKISTAN

Photos: IRD Global

INDUS  
HOSPITAL

All these programs are **comprehensive**

All interventions are **simultaneous**

All use **effective**

### Opportunity:

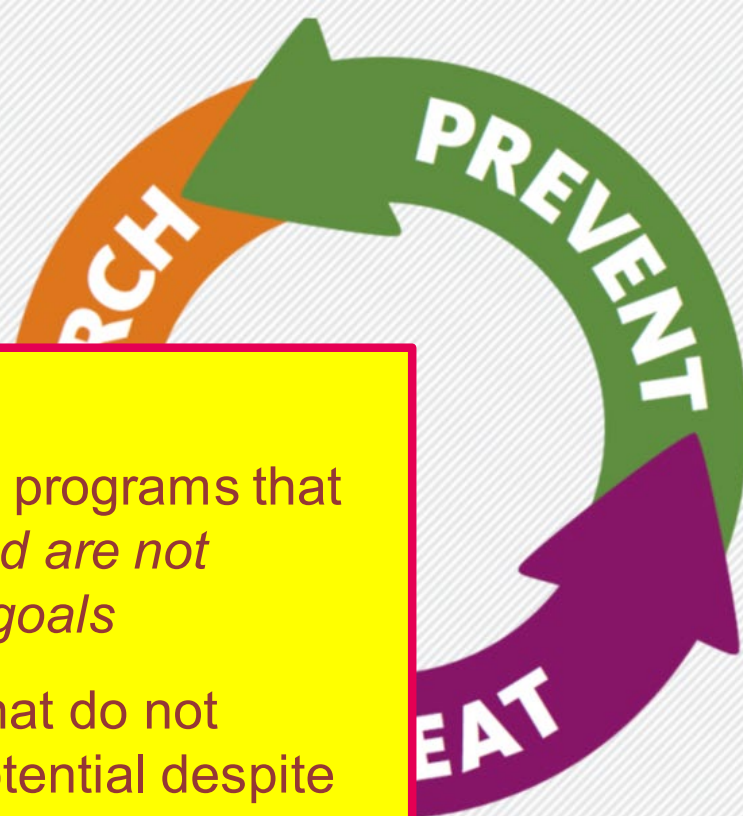

- The Global Fund supports programs that are *not comprehensive and are not designed to meet the UN goals*
- This results in programs that do not perform to their optimal potential despite continued investment
- Comprehensive S-T-P programs is the standard of care for TB. This should be reflected in what we see globally

A  
APPROACH

UNITE TO → **END  
TB**

**TREAT**

TREAT EFFECTIVELY · SUPPORT THROUGH TREATMENT

**PREVENT**

PREVENT EXPOSURE · TREAT EXPOSURE

# **BUILDING A PLATFORM FOR CARE DELIVERY**

**HIV  
Hepatitis C  
Diabetes  
Heart Disease  
Mental illness  
COVID-19**

# Pandemic Preparedness: Improving biosecurity through investments in comprehensive epidemic control for tuberculosis

We have an opportunity to shift the global TB control paradigm in a way that will simultaneously strengthen global biosecurity.

Tuberculosis		Biosecurity
SEARCH	Find people sick with TB or exposed to TB using effective tests (e.g. mobile x-ray; genetic tests).	Community-based screening platform to isolate cases, limit and contain exposure, and stop transmission in communities and place where people live and work.
TREAT	Rapid deployment of the correct medicine and support the sick. This requires testing of strains, access to medicines, and a system for community-based care delivery.	Community-based delivery of treatment in order to prevent hospitals from becoming overburdened. This includes developing systems for home monitoring, creating “virtual hospitals”, and systems to support the sick.
PREVENT	Prevent people from being exposed to TB and treating people who have been exposed so that they do not become sick with TB.	Preventing exposure using engineering controls (e.g. UV germicidal lighting) to keep public spaces safe, have a system to provide preventive therapy.

## Summary of key ideas

1. We are not on track to meet the UN TB elimination goals and rates of TB have increased during the COVID-19 pandemic
2. We have had a TB elimination strategy since the early 1960s: **SEARCH-TREAT-PREVENT**. It has not been implemented globally
3. We need to support communities and programs to implement this comprehensive approach through catalytic investment (e.g. Global Fund and bilateral programs)
4. We need to support research that makes **SEARCH-TREAT-PREVENT** better (e.g. POC tests, vaccines, immunomodulators)
5. We are building more than a TB program. We are building a platform for healthcare delivery in communities where people live and work.
