

Maternal Health Inequities:

Things we should have already known, but nonetheless learned from the COVID-19 pandemic

Equity in the time of COVID: Statements of the problem(s)

- Inequity in burden and consequences of disease
 - Living (e.g. marginal housing, multigenerational homes) and working circumstances (essential work) of many of our patients make social distancing and in-home isolation challenging
 - Many public health messages not delivered in multiple languages
 - Access to testing likely not uniform by population
 - The prevention mechanism – namely home confinement – increases the risk for gender-based violence and other mistreatment, with particular concern for those with fewer resources
 - Racist and xenophobic attitudes a threat to patients and workforce
 - Co-morbid conditions (diabetes, obesity, hypertension) that are risk factors for severe COVID-19 illness are differentially distributed in U.S., due to long-standing inequities in access and quality of care, structural racism
 - In OB, these concerns overlay the backdrop of the maternal mortality / severe maternal morbidity crisis in the U.S., particularly among Black women

Focus	Scope	Completed	Ongoing & Next Steps
PRACTICE MANAGEMENT			
Workforce Recruitment	<ul style="list-style-type: none"> Providers with facility in languages other than English, willing to help to conduct telemedicine visits, particularly for OB, understanding that virtual visits through an interpreter may lack the richness even of in-person visit with interpreter Given emergence of Chelsea as hotspot, need to conduct visits of potentially greater length or complexity, see OB patients in the RIC, need to consider if need to redeploy providers and increase sessions at CHC 	<ul style="list-style-type: none"> Pushed out Center for Diversity and Inclusion survey for faculty to complete re: facility in other languages Received department-specific data from surveys as well as 	<ul style="list-style-type: none"> How to use language data – time to solicit clinical partners to conduct telehealth visits for patients of LEP? Won't be very easy to foster these partnerships; for those with ready ties to native/fluent speakers, can consider trading off visits. Will hold consideration of program
BIAS AND MISTREATMENT			
Provider bias		<ul style="list-style-type: none"> During times of crisis, clinician and system biases may be exaggerated, leading to further inappropriate differentials in care 	<ul style="list-style-type: none"> Re-emphasized this to faculty during provider meetings and Town Halls
Community mistreatment		<ul style="list-style-type: none"> Uptick in xenophobia and racism toward Asian-Americans, both in community and among providers 	<ul style="list-style-type: none"> Ongoing requests for team members to consider contributing to reporting of witnessed biases, microaggressions, racism See if link to Dept of Radiology presentation from 4/9 is available for pushing to department
DATA AND REPORTING			
Reporting		<ul style="list-style-type: none"> Inequities in COVID, as well as other OB-related safety signals, like to be noted and exaggerated during this crisis 	<ul style="list-style-type: none"> Will continue to track OB safety metrics by race/ethnicity, language and insurance status, as we have always done Will begin to track COVID+ tests, admissions among OB patients by race/ethnicity, language insurance Understand if we can track Gyn virtual visits (kept, cancelled) by equity metrics? Understand if we document ability of patients to accept telehealth visits when scheduling calls are made, and then analyze by equity metrics?
RESEARCH			
	<ul style="list-style-type: none"> OB telehealth visits will rely on having a blood pressure cuff available at home Virtual visits to begin to enroll as of 4/6 	<ul style="list-style-type: none"> To extent we are seeing considerable inequities in prevalence and severity of COVID disease, want to make sure experience of all our patients is captured equitably in planned research enrollment and endeavors 	<ul style="list-style-type: none"> Advocacy to research leaders to make sure language capacity of recruiters is considered
PHILANTHROPY			
		<ul style="list-style-type: none"> Department faculty and others likely willing to give for specific (or general) aid in this time of crisis 	<ul style="list-style-type: none"> Consider internal drive for cash donations, "donations" of minutes/Mb for telehealth, directed toward patients and/or staff in need; ideally would be administered through central programs and not reliant on department individuals to organize; a space for Development Office?
REPRODUCTIVE JUSTICE			
Reproductive Justice		<ul style="list-style-type: none"> During times of crisis, threats to reproductive justice may arise 	<ul style="list-style-type: none"> Consider option for COVID+ will be able to accommodate keeping families together

COMMUNITY HEALTH

Social determinants of health

Many OB patients may have new needs and different SDH over the course of the pregnancy given the COVID crisis

To continue already-established practice of screening for SDH at the start of pregnancy

Need to continue to emphasize need for screening at practice level > may be de-prioritized in some areas

Will you be able to participate in virtual visits later in the pregnancy (do you have a phone or computer, adequate internet/data, a safe place to talk?)

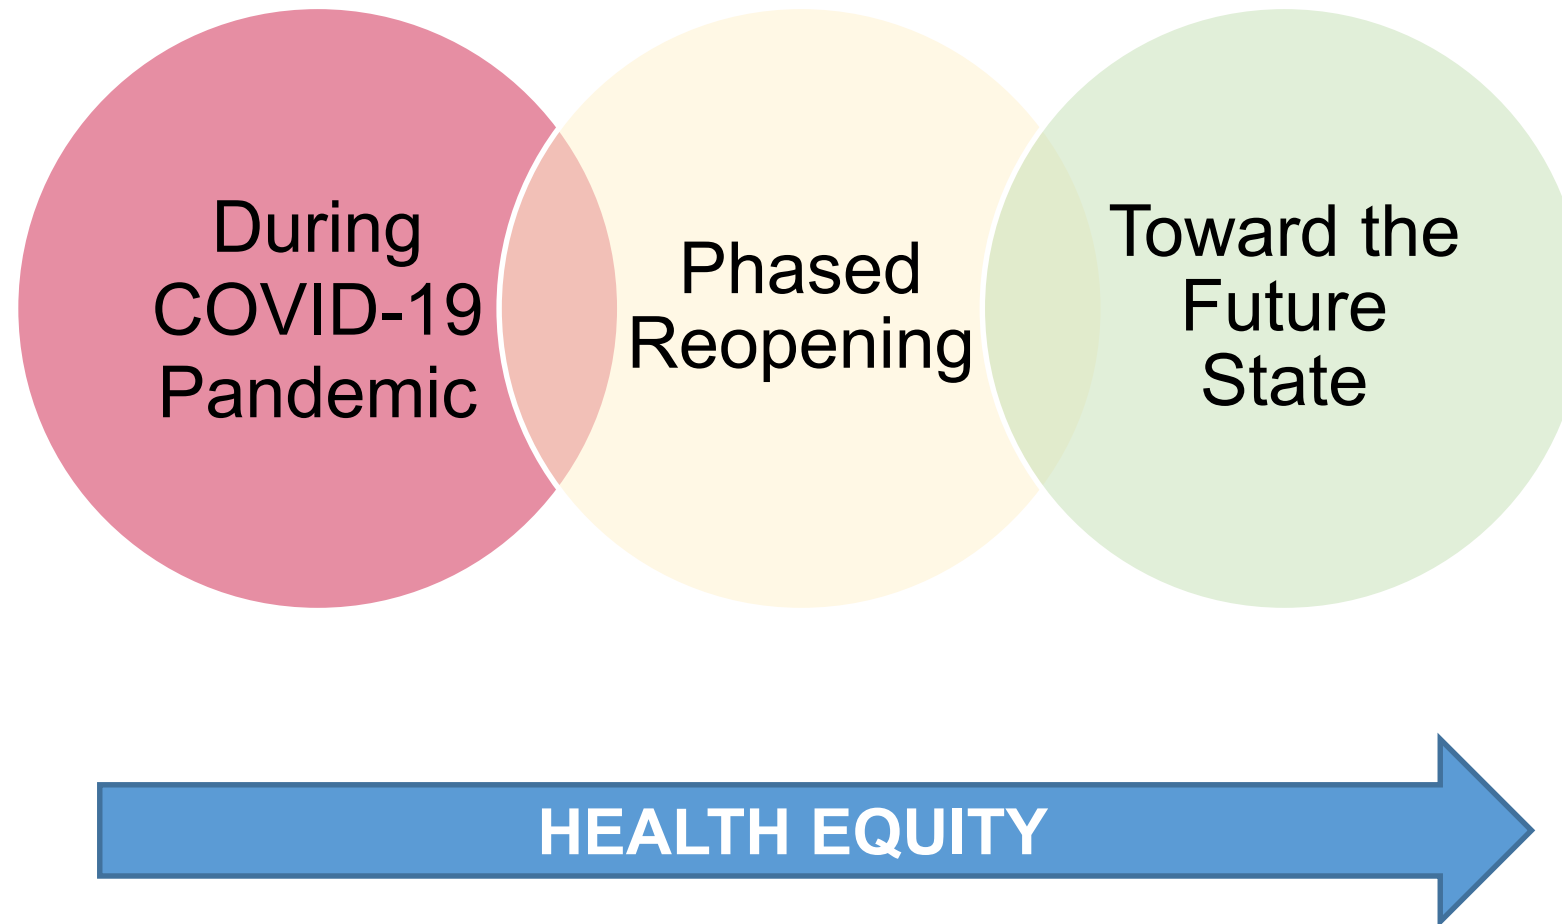

From SW team: "I wanted to chime in with info about another resource that we can offer to support patients with. The Social Services department has a wonderful nurse Specialist, who can help patients with info about any kind of resource under (employment, housing, food, assistance, baby supplies, etc.) or another provider has in this service, you can reach out to one of the OB consultants. After we consult with the patient (doesn't matter, depending on their needs), we can then refer them to the appropriate Specialist. If the patient has resources, the patient is not in need, we can be in touch with them with a call."

Integrating Equity and Community Health into Response, Reopening and Recovery: Upfront and Intentional

STIGMA

The value of data (no quality without equity)

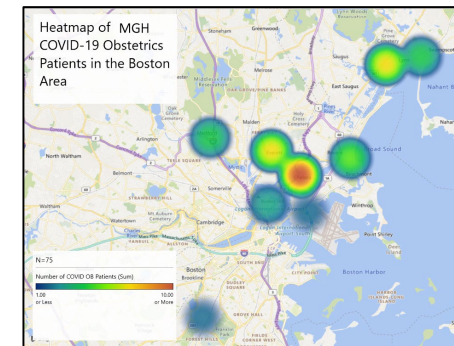

MASSACHUSETTS
GENERAL HOSPITAL

OBSTETRICS &
GYNECOLOGY

- Continue to track COVID, utilization and safety metrics by patient (race/ethnicity, language, SES) / community factors
 - Infection, hospitalization, death rates
 - Virtual visits, “re-opening” visits
 - Pregnancy and neonatal outcomes
- Population health approach
 - Creation of lists of cohorts to identify patients potentially falling through the cracks, particularly for vulnerable populations and those with COVID-19 infection

(credit: I. Goldfarb)

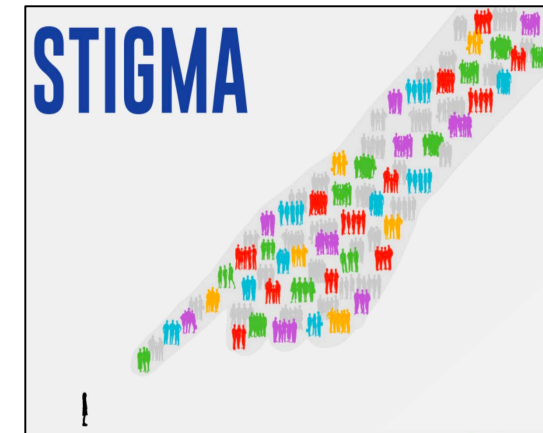

The threat of stigma

MASSACHUSETTS
GENERAL HOSPITAL

OBSTETRICS &
GYNECOLOGY

- Recognize the value of data, but also the potential danger in its interpretation
- Reminder of our biases and how they may manifest
- Consider ways to document racism, microaggressions and biases, teach upstander techniques

The importance of communication

MASSACHUSETTS
GENERAL HOSPITAL

OBSTETRICS &
GYNECOLOGY

- Understand language preference of patients and staff
- Ensure public health messaging accessible to multilingual audience
 - Similarly, recognize the language preference of staff, and tailor urgent messages for maximum uptake
- Multilingual care extenders

The interplay of community health and medical care

MASSACHUSETTS
GENERAL HOSPITAL

OBSTETRICS &
GYNECOLOGY

- Understand social determinants of health to be a dynamic and sometimes-situational construct
 - Screen frequently, know community resources
 - Food insecurity; housing “instability” vis-à-vis social distancing
- Health care team expansion
 - Medical students
 - Behavioral health specialists
 - Community health navigators

SOCIAL DETERMINANTS OF HEALTH

The social determinants of health are the conditions in which we are born, we grow and age, and in which we live and work. The factors below impact on our health and wellbeing.

- The root causes of poor disaster recovery can be stopped only by countering the devastating impacts of acute as well as chronic stressors. Disaster aid must prioritize those most vulnerable, regardless of race, ethnicity, income, and citizen status. One potentially daring but promising strategy is to **elevate community resilience as an essential public health service** and consequently integrate community resilience measures as performance benchmarks of federal, state, and local health agencies.*

Reflecting on Equity in Perinatal Care During a Pandemic

P. Mimi Niles,^{1,*} Ifeyinwa V. Asiodu,² Joia Crear-Perry,³ Zoë Julian,⁴ Audrey Lyndon,⁵ Monica R. McLemore,² Arianna M. Planey,⁶ Karen A. Scott,⁴ and Saraswathi Vedam¹

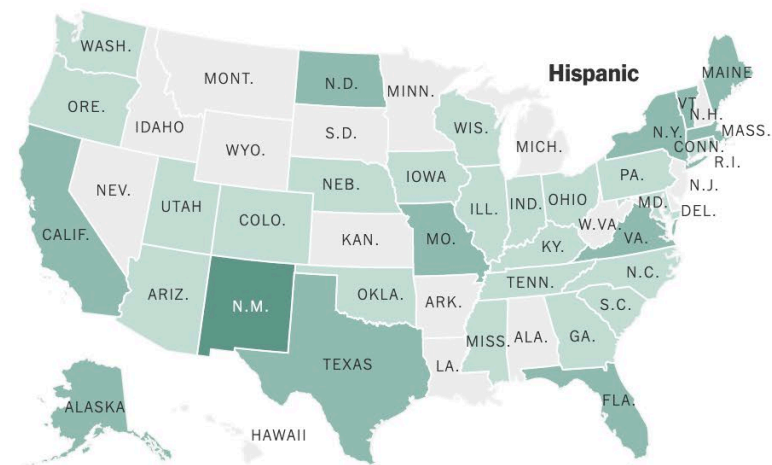

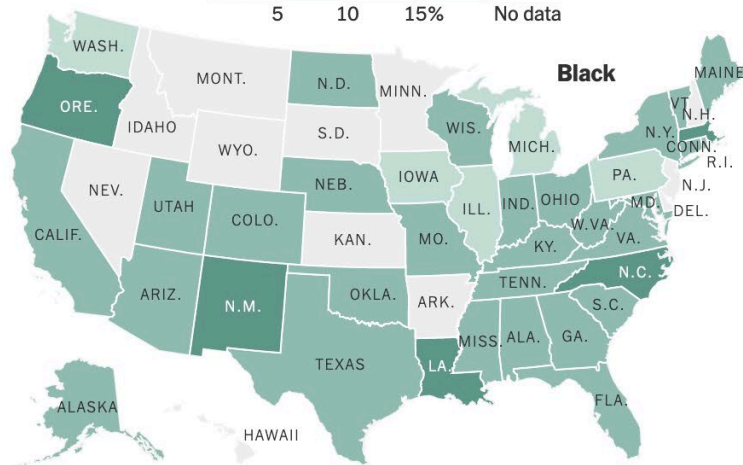

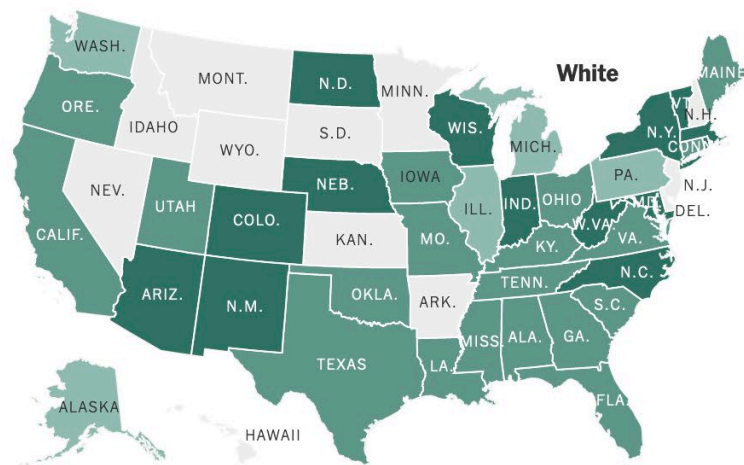

- “We conducted a thoughtful review of the available literature regarding COVID-19, in the framework of existing literature on equitable maternity care that centers the lived experiences of birthing people. **We disrupt the myth that policies that uphold the human rights of birthing people and policies that decrease risk of COVID-19 transmission are mutually exclusive.** We submit three main contributors to perpetuating inequitable maternity care:
 1. The lack of rigor in using case studies to suggest a change in evidence-based practice
 2. The lack of evidence-based solutions that address the root cause of inequitable access to services, resources and equipment
 3. The continued failure to apply a comprehensive human rights-based reproductive justice lens to how we care for birthing people and families”

**COVID VACCINE EQUITY:
WHAT DO WE NEED TO DO TO REACH THIS GOAL?**

Vaccinations as a share of group's total population

: slow to act or proceed (as from fear, indecision, or unwillingness) : tending to [hesitate](#) : showing or feeling reluctance or [hesitation](#)

Improving vaccine access: state strategies

- Using CDC Social Vulnerability Index to allocate vaccine
- Prioritizing vaccination appointments by group or neighborhood
- Call centers or texting options to facilitate access to those for home online sign-ups may not work well
- Locating vaccine clinics in underserved areas
- Collaboration with CBOs, FQHCs
- Social media campaigns
- Increasing information that vaccine is available at no cost
- Clarification that vaccine can be given regardless of immigration status
- Public reporting of vaccination data by race/ethnicity
