Little noticed, Filipino Americans are dying of COVID-19 at an alarming rate

AJPH RESEARCH & ANALYSIS

Association of “#covid19” Versus “#chinesevirus” With Anti-Asian Sentiments on Twitter: March 9–23, 2020

Yulin Hswen, ScD, MPH, Xiang Xu, MS, Anna Hing, MPH, Jared B. Hawkins, PhD, John S. Brownstein, PhD, and Gilbert C. Gee, PhD

See also Chou and Gaysynsky, p. 773.

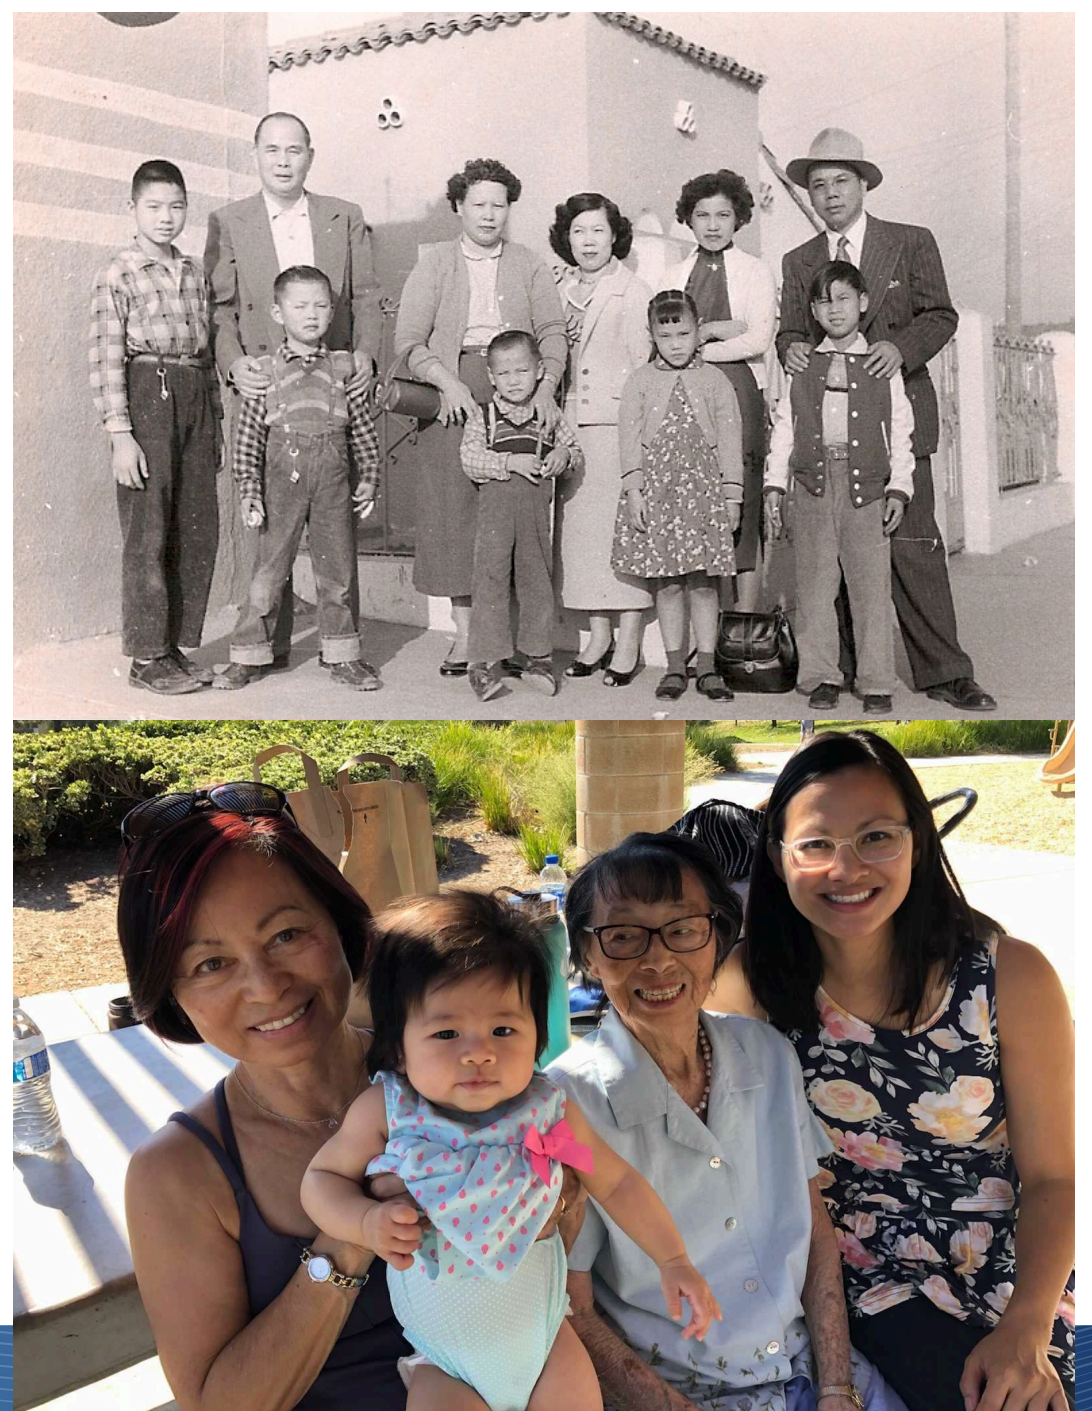

Objectives. To examine the extent to which the phrases, “COVID-19” and “Chinese virus” were associated with anti-Asian sentiments.

Methods. Data were collected from Twitter’s Application Programming Interface, which included the hashtags “#covid19” or “#chinesevirus.” We analyzed tweets from March 9 to 23, 2020, corresponding to

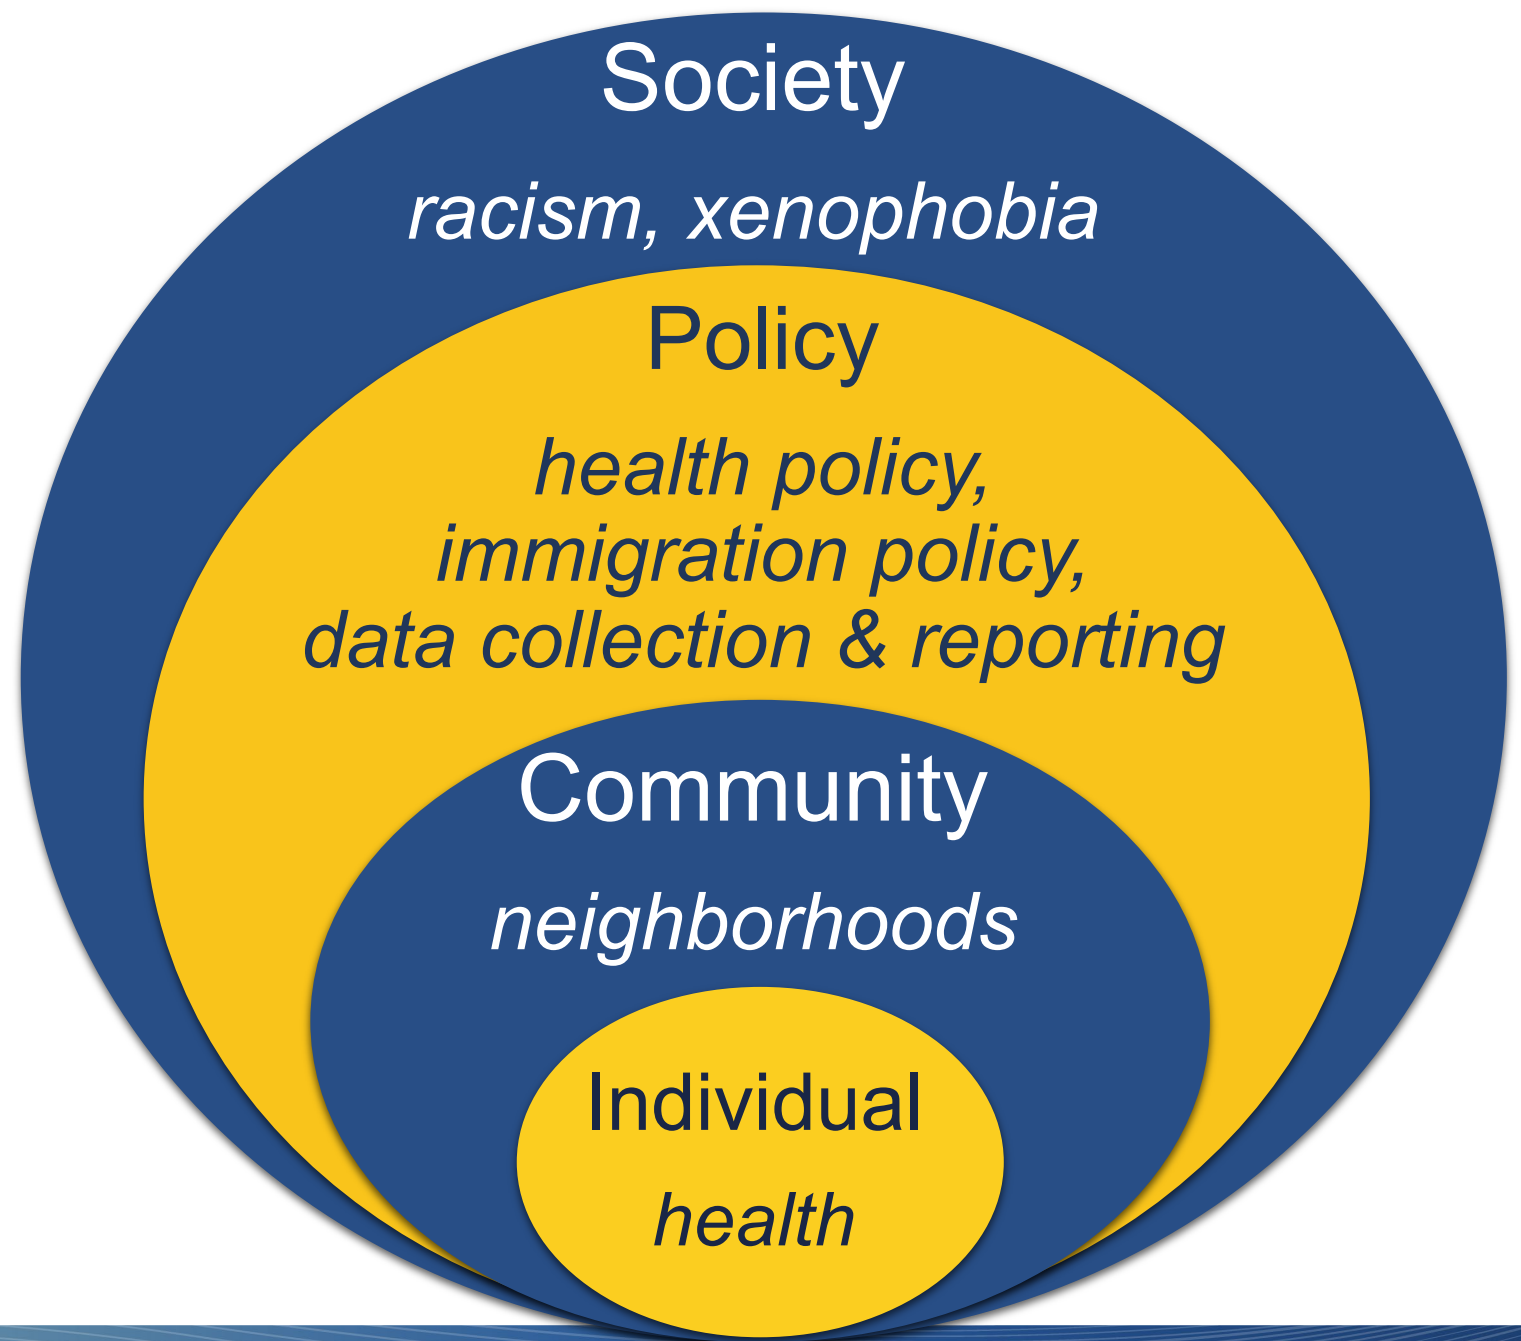

***“You can’t move
forward until
you look back.”***

–Dr. Cornel West

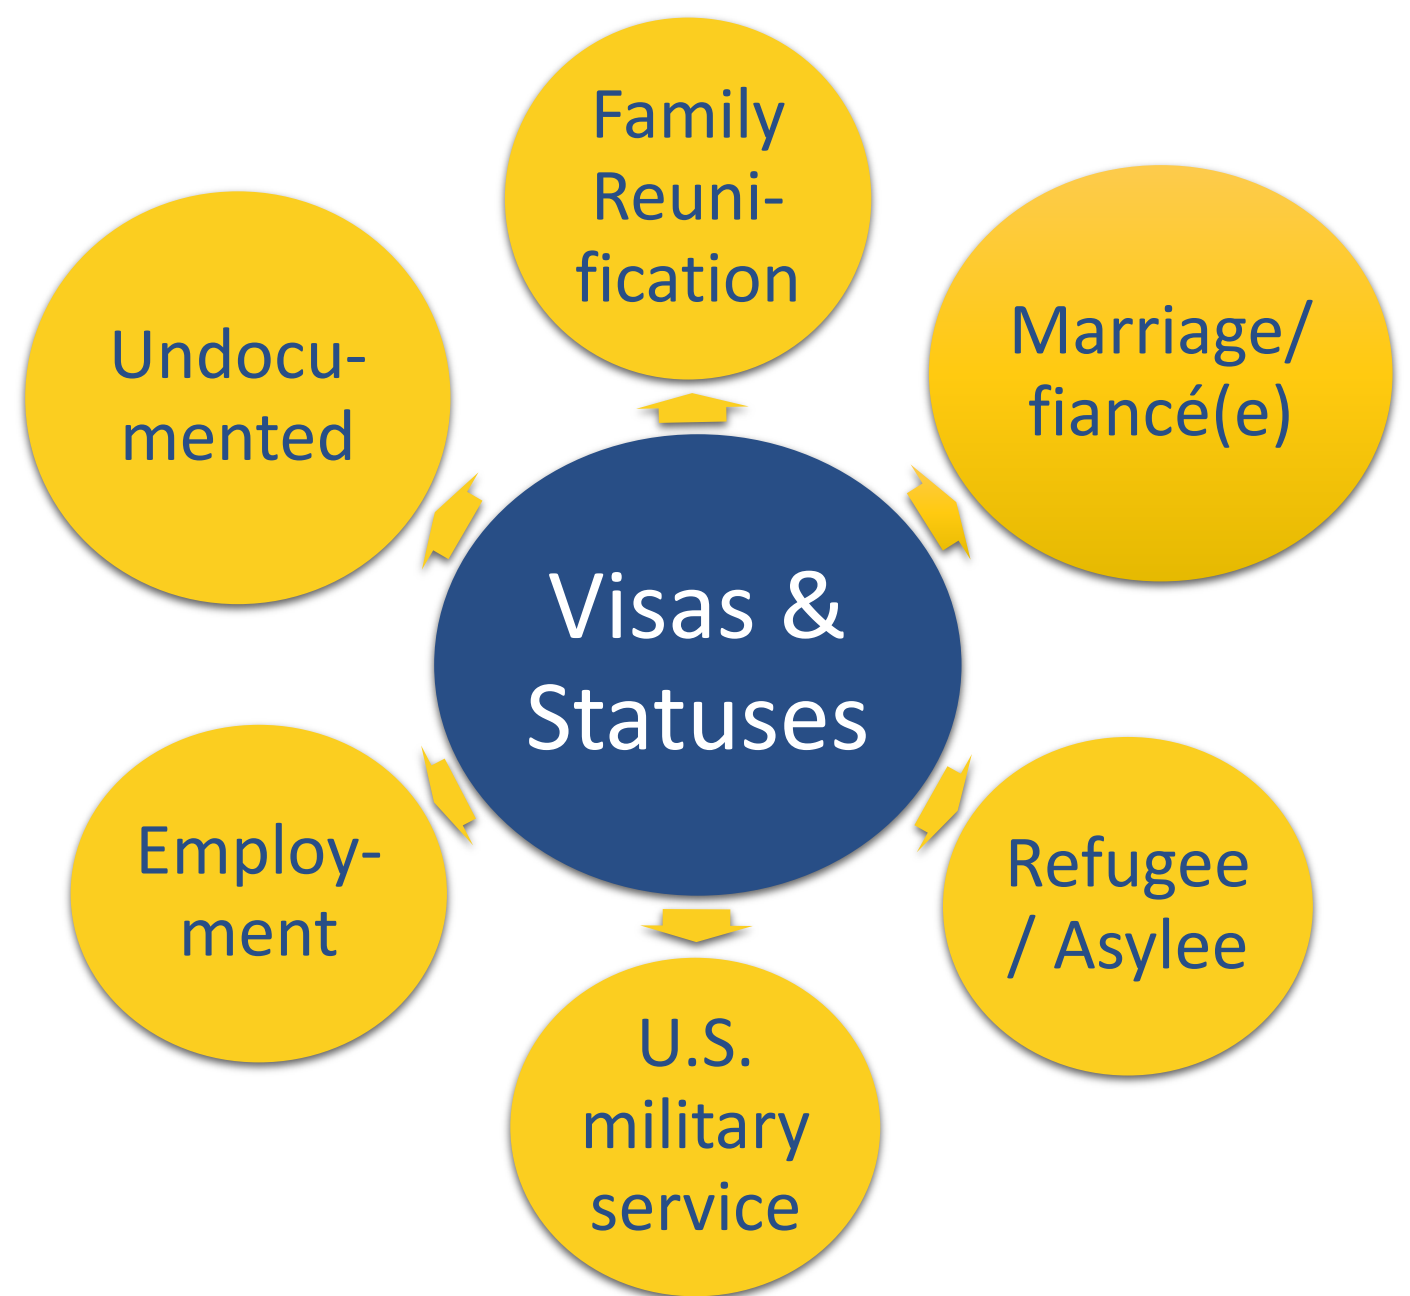

Social Ecological Model of AA & NHPI Health Inequities

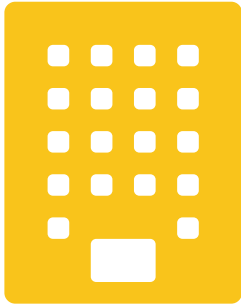

Brief Historical Snapshot for Asian Americans

- **Early 1800s** – immigration & labor
- **1875** – Page Act
- **1882** – Chinese Exclusion Act
- **1924** – Immigration Act
- **1934** – Tydings-McDuffie Act
- **1942-1945** – Executive Order 9066, Japanese Internment
- **1965** – Civil Rights, Immigration and Nationality Act, coining of “Asian American”
- **1980** – Refugee Act
- **1982** – killing of Vincent Chin
- **2017** – killing of Srinivas Kuchibhotla

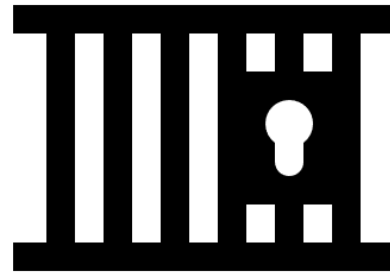

The role of immigration policies on status

How anti-immigrant stigma contributes to racial/ethnic health disparities

**Multilevel
Discrimination &
Stress**

**Deportation &
Detention**

**Policies that Limit
Health Resources**

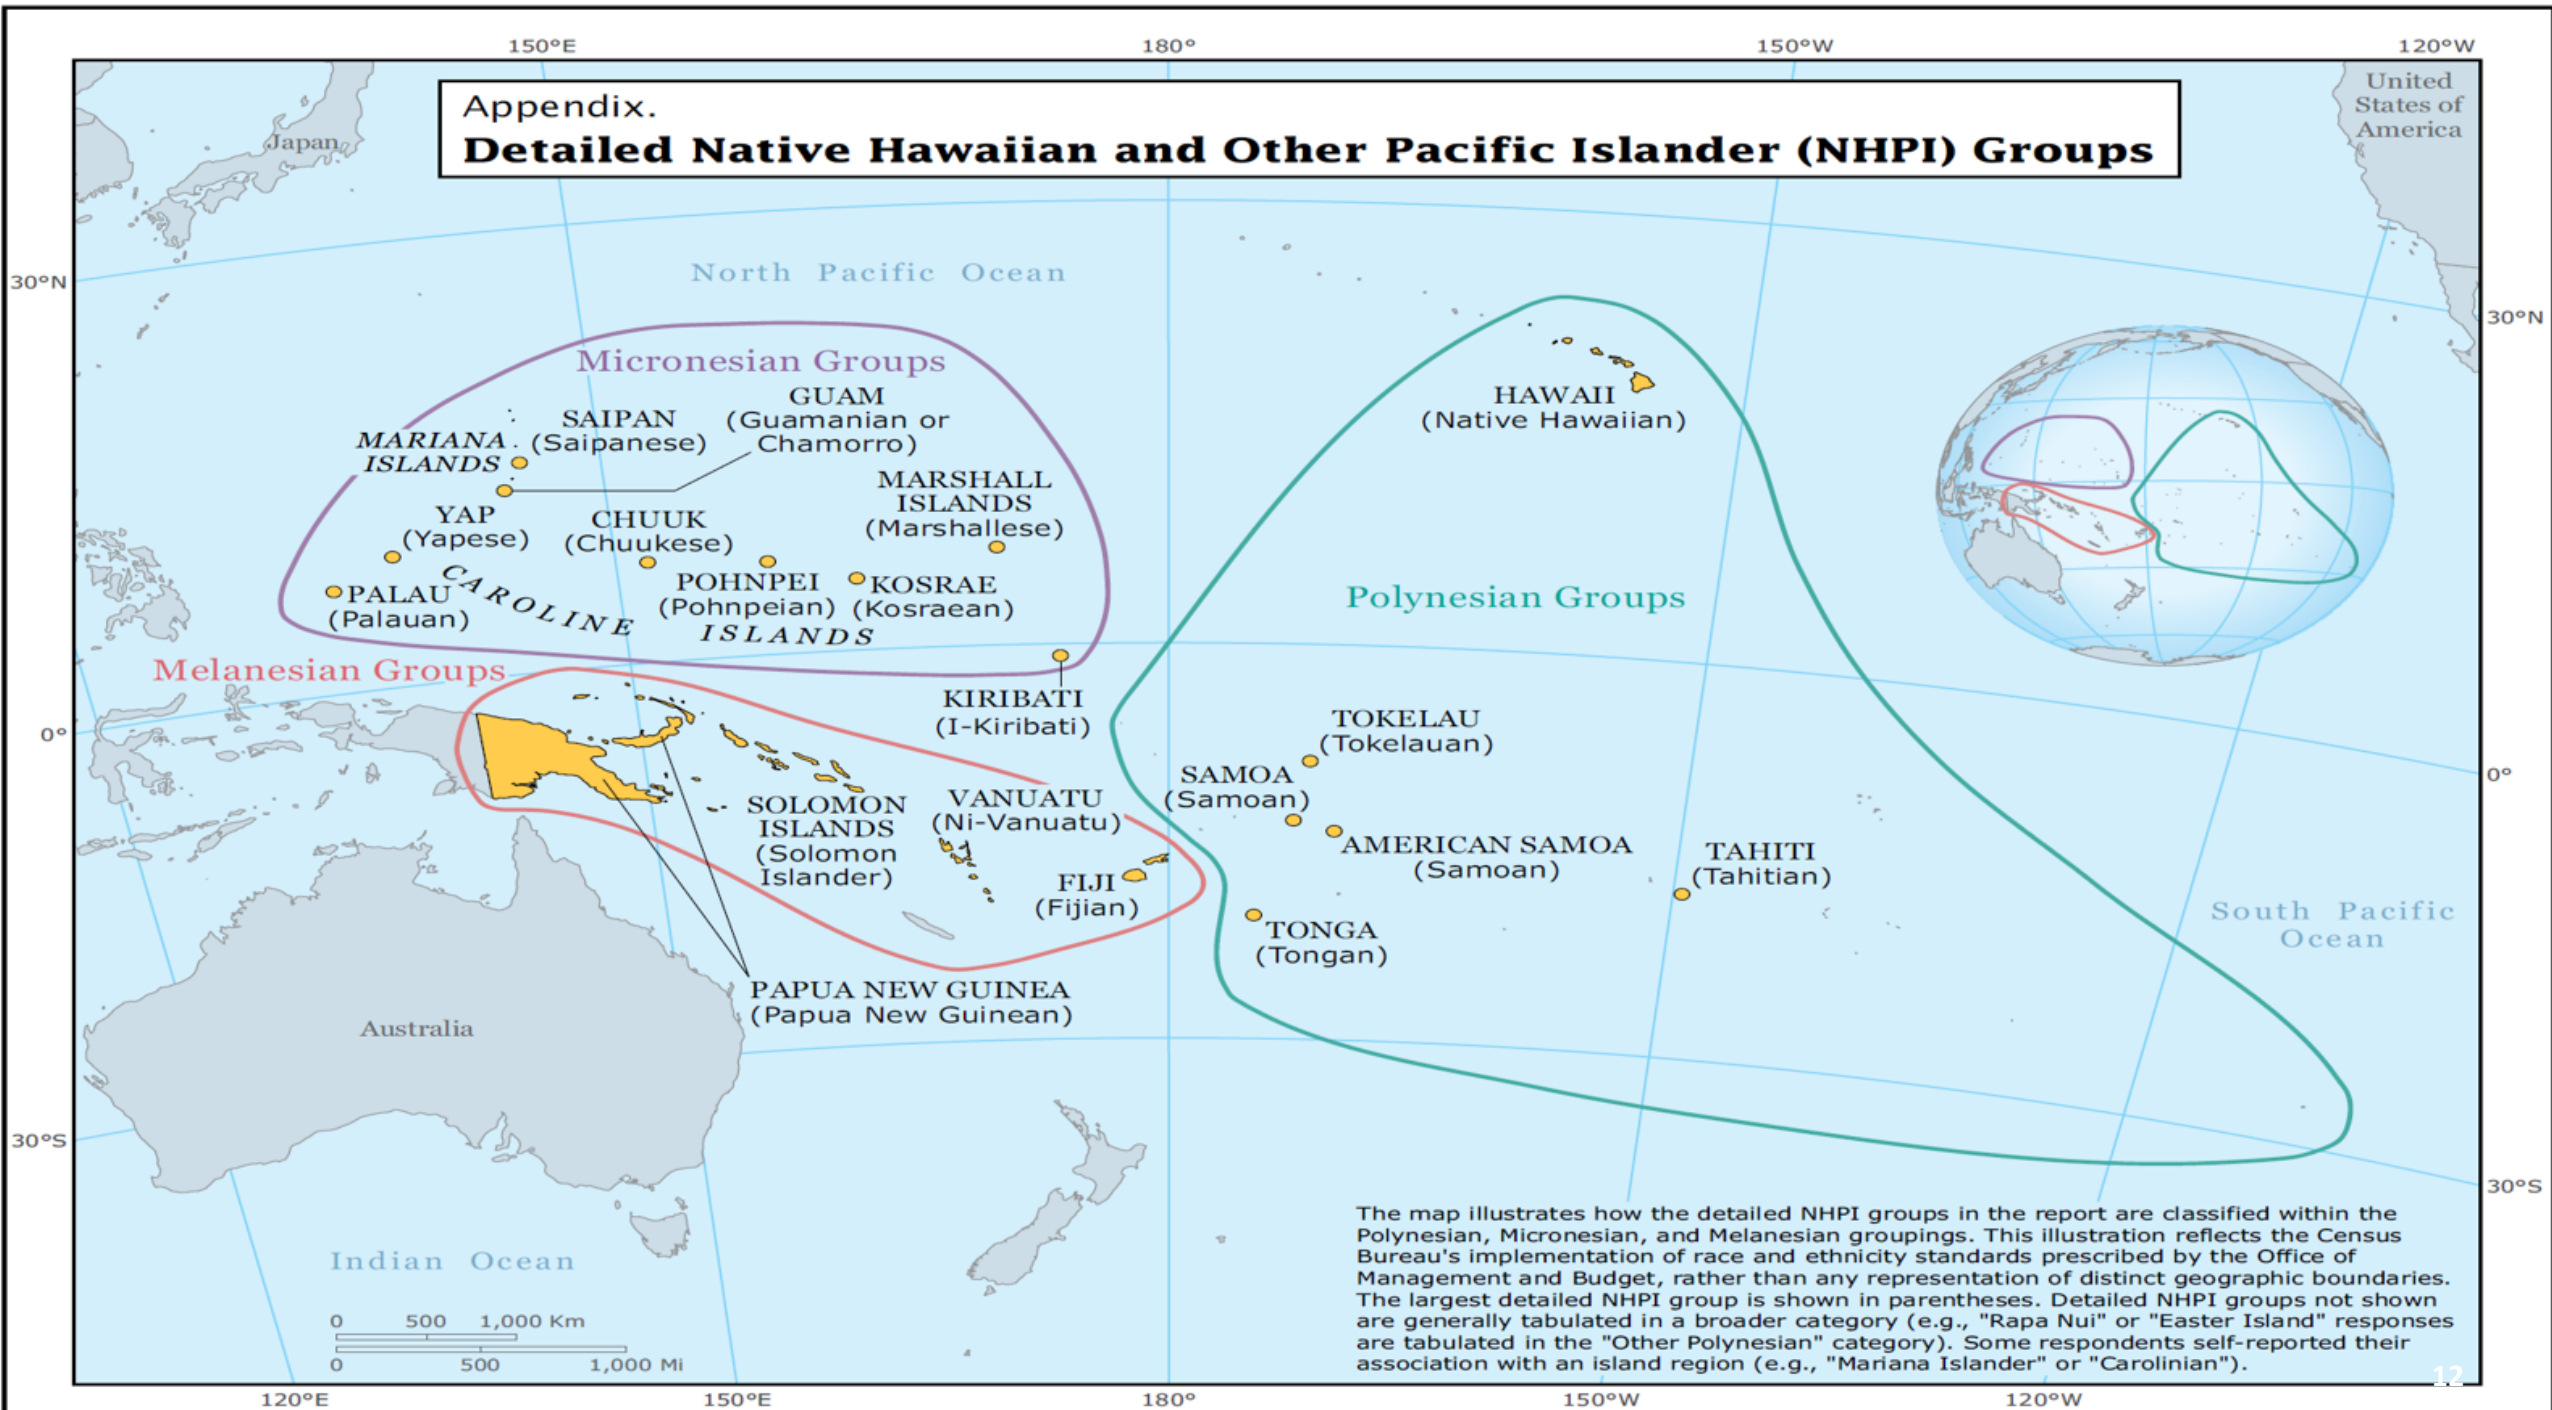

How status affects health inequities

- Immigration status ↔ socioeconomic status
- 1.7 million undocumented Asians in the U.S.
- Legal immigration & federal 5-year waiting periods
- Public charge
- Assumed foreignness, anti-immigrant stigma

How status affects COVID-19 health inequities

- Likelihood of being “essential workers”
- Health care workers (e.g. Filipinx nurses)
- Small business owners (e.g. Chinatowns, Koreatowns, etc.)
- Fear of anti-Asian hate
- Little access to linguistically and culturally concordant health resources, especially among low-socioeconomic status Asian groups

How the Model Minority Myth has Affected Native Hawaiians & Pacific Islanders (NHPIs)

A brief history of NHPIs in the U.S.

Social determinants of NHPI health & COVID-19 risk

- Sāmoans (16%), Tongans (16%), and Guamanians/Chamorros (11%) have higher *poverty rates* compared to Whites (7%)
- More Tongans (26%), Marshallese (24%), Fijians (17%), Guamanians/Chamorros (16%), and Sāmoans (15%) are uninsured compared to Whites (11%)

Social determinants of NHPI health & COVID-19 risk

- Higher neighborhood poverty and neighborhood environmental pollution
- Highly communal
 - More likely to live in inter-generational homes
 - More likely to live in more crowded living conditions, especially in dense urban areas

Social determinants of NHPI health & COVID-19 risk

- Overrepresented in essential workforce & at-risk jobs
 - Food preparation (meat packing)
 - Health care aides
 - Store clerks/cashiers
 - Military
 - Security officers
 - Transportation/delivery
 - Grounds maintenance
 - Hand laborers

Pre-existing chronic conditions

- Higher prevalence of
 - Cancer
 - Cardiovascular disease
 - Obesity
 - Diabetes
 - Asthma
 - Smoking/vaping

The context: *structural racism*

- The ways in which **societies** foster racial discrimination through **systems** (e.g. housing, education, wealth, health care, immigration policy, incarceration, etc.)...reflected in history, culture, and institutions.

–Bailey et al. 2017

Key Recommendations

1. Provide disaggregated health & demographic data for AA & NHPI subgroups.
2. Multilevel interventions to address issues at local, county, state, and national level.
3. Increase resources to AA & NHPI serving community-based organizations.

Key Recommendations

4. Bolster community capacity through investment in youth leadership development.
5. Strengthen/build transformational coalitions across racial/ethnic groups to address common issues affecting communities of color.
