Hello,

Thank you for your commitment to conducting this very important study. In regards to these specific areas of the report:

- "The current and future deployment of all levels of nurses across the care continuum, including in collaborative practice models, to address the challenges of building a culture of health.
- The role of the nursing profession in assuring that the voice of individuals, families and communities are incorporated into design and operations of clinical and community health systems.
- The training and competency-development needed to prepare nurses, including advance practice nurses, to work outside of acute care settings and to lead efforts to build a culture of health and health equity, and the extent to which current curriculum meets these needs."

I would invite you to review the information provided on this site: <https://nurseengineer.com/>. There has been considerable interest and work done to merge the fields of nursing and engineering and academic programs are emerging to develop the role of the nurse engineer. More work is needed to determine how these individuals will practically serve as a bridge between various functional groups needed to ensure that nurse and patient voices are at the forefront of environment, care delivery, and device design in the healthcare setting.

Additional information can be found at <https://www.nursingihd.com/>. The Nurse Engineer is collaborating with this organization to advance this area of need.

Thank you in advance for your consideration of this information and your much needed efforts in defining the future of nursing. Please feel free to contact me with questions.

Best regards,  
Kelly Landsman
