From Hurricane Katrina to Paradise Wildfires, Exploring Themes in Disaster Human Services – A Workshop

Workshop 1: Children and Youth in Disasters

Key Issues for Parents & Guardians: Housing + Mental Health

Jonathan Sury, MPH, CPH 7/22/2020

Disaster Landscape

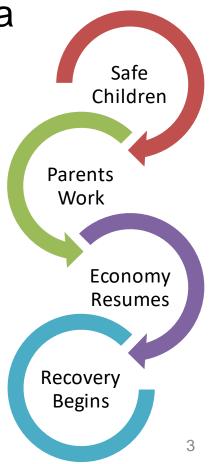

Observed Themes

 Hurricane Katrina, Superstorm Sandy, Hurricane Florence, Hurricane Maria

- Pre-existing housing crises
 - High risk housing
 - Poor mitigation
 - Slow reconstruction/rebuilding
- Mental health
 - Parent/Guardian influence on child
 - Trust in child-serving institutions

Socio-ecological Model of Recovery

Time functions:

Community reconstruction

Disaster Exposure

(direct and

secondary

effects)

Chronic Stressors

Communal level: social vulnerability + econ disparity; cumulative disasters

Household level: poverty, single parent, income and housing instability

Individual level: mental health, chronic illness or disability

Pre-Event Moderators

Household level: SES, insurance, homeowner, attachment to religious/civic/social institutions

Individual level:

Race/ethnicity, gender, age, education, occupational prestige, religiosity, selfefficacy, locus of control

Mediators

Formal help: health and social service systems (timing and type of help)

Post-Event Moderators

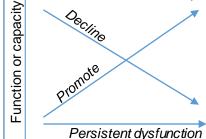

Communal Level: Density and type of social advocacy institutions, stability and capacity of public institutions and lifeline services

Household Level: Sense of community, family functioning, received & provided social support

Individual Level: Self-efficacy, post-traumatic growth

<u>Outcomes</u>

Recovery Maintain

Time

- 1. Economic stability
- 2. Housing stability
- 3. Physical well-being
- 4. Mental well-being
 - Social role adaptation

Adapted from Abramson, DM, Stehling-Ariza, T., Park, Y.S., Walsh, L. and Culp, D (2010). "Measuring Individual Disaster Recovery: A Socio-ecological Framework." Disaster Med and Public Health Prep 4: S46-S54.

5 predictors of post-disaster recovery

- Housing stability*
- Stable economic resources
- Good mental health*
- Good physical health
- Positive social role adaptation

superstorm sandy

sandy child and family health study (s-cafh)

S-CAFH: Financial Stressors

- Residents that had major structural damage are 2.5 times as likely to have trouble paying rent/bills/mortgage/food/transportation, regardless of income.
- Residents living in poverty, with household incomes below \$20,000 per year, were 6.7 times as likely to experience trouble paying bills, the extent to which their homes were damaged.

S-CAFH: PTSD & Housing Damage

ODDS	OF HAVING PTSD AFTER HURRICANE SANDY
Home experienced minor damage, versus no damage	2.67
Home experienced major damage, versus no damage	3.70
Living in household earning <\$20,000, versus all others	1.55
Respondent was clinically diagnosed with depression prior to Hurricane Sandy	2.97
Black, versus white residents	1.59
Hispanic, versus white residents	3.49
Men versus women	0.66
Residents ages 19-35, versus those who are 36-64	0.29
Residents ages 65 and over, versus those who are 36-64	0.81

 Positive predictors of PTSD include: housing damage, prior history of depression, and identifying as Hispanic.

hurricane katrina

gulf coast child and family health study (g-cafh)

G-CAFH: Housing Stability

- Unstably housed are...
 - 2.3 times as likely to report mental health disability
 - 1.9 times as likely to report a child with emotional problem
 - 3.1 times as likely to have a poor sense of community
 - 1.8 times as likely to have a child whose academic performance was worse after the hurricane
 - 1.9 times as likely to not have adequate social support

Takeaways & Recommendations

- Build the capacity of parents/guardians to serve as resilience buffers for their children
 - Support programming to create trauma-informed communities
 - Pro-actively address/plan for long-term mental health impacts
- Create a formal integration with local emergency management, licensing, and social services for child-focused preparedness issues: ie staff and funding
- Invest in long-term financial support to community-based organizations to offer housing repair and/or extend the duration of housing assistance programs
- Unite preparedness planning guidance and technical/financial assistance for child care centers, particularly in Puerto Rico
- Foster families require technical assistance to develop their own household disaster plans
- Shift all-hazards planning approach to all-hazards-at-once to accommodate compounding crises
- Connect with and continue to listen to the needs of affected communities beyond the funding-defined recovery phase to that of the experienced recovery phase
