

Biomarkers of Sleep & Sleep Disturbance: Methods and Solutions

Aarti Sathyanarayana

Assistant Professor
Northeastern University

aarti@northeastern.edu

Presentation to the National Academies of Sciences, Engineering & Medicine
November 2-3, 2022

Activity (Counts per Minute)

Progress

1.

The underlying electrodynamics of the brain can be quantified and utilized as digital biomarkers

2.

Sleep has a strong relationship with epilepsy, and may be key to identifying digital biomarkers of other CNS disorders

3.

Sleep is a mitigable target by smartwatch-driven behavioral modification

Progress

1.

The underlying electrodynamics of the brain can be quantified and utilized as digital biomarkers

Opportunities

1.

Shared dataset generation

- Large representative datasets
- Focused cohorts
- Longitudinal datasets for personalized models
- Multimodal for context-awareness

2.

Investment in computational approaches

- Digital phenotyping tools for early detection and treatment monitoring
- Algorithm development for multimodal signals
- Personalized device-agnostic models
- Collaborative approaches with neurophysiologists
