

Working Construct

Frame Neuropsychiatric Disorders are Circuitopathies

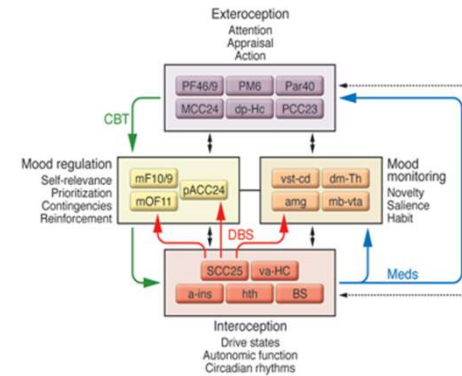

Movement Disorders

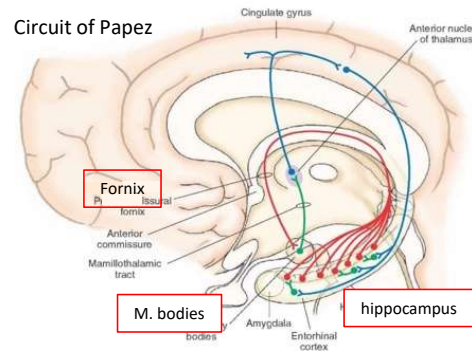

OCD

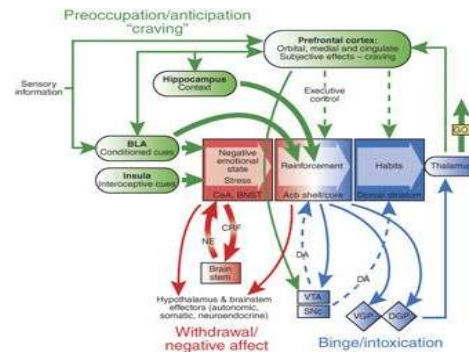

Depression

Epilepsy/ Memory Disorders

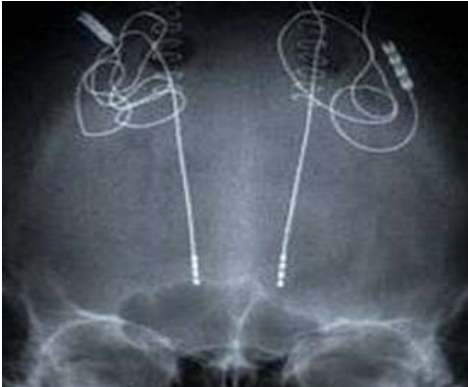

Addictive Disorders

Targeted Modulation of Illness Circuits

general approach

- **WHY** needed (specific symptoms, side-effects, progression, resistance)
- **WHAT** should happen (stim/block; intermittent/ continuous; time course)
- **WHERE** to stimulation (critical node; one or many)
- **WHO** (one size fit all; different target, different patients)
- **HOW** implementation (parameters, integrate with other treatments, rehab)
