

# Health Care Breakout Session: A Play in Two Acts

As **mostly** remembered by David  
Chambers\*

# Act 1: Brain Dump

- **Measurement** (planning, implementation, feedback)
- **Resources** (Coverage for Srv, Workforce, IT)
- **Actions** (implementation, adaptation, demand, evidence synthesis, local innovation)

# Challenges (Opportunities)

- **Definitional** -Prevention, Evidence, EBPs vs. EIPs
- **Getting information to key stakeholders**
  - Types of Data (Epi, Q of Care, Dvl Apprp. Outcomes)
  - Data for stakeholders (e.g. State Medicaid, MCOs, QI Directors, Children and Families)
- **Creating the Business Case** – Fitting existing streams, workforce with Px programs

# What has helped...

- Starting with a shared outcome of interest, even if not specifically C-CAB
- Ongoing assessment in local community
- New ways technology can be used (Fidel, Epi, Program Delivery)
- Use of waivers, payment flexibility
- Menus of what to implement

# Act II: Where should we go next?

- Invite key state HC folks—sharing headaches
- Engagement—“community ownership”
- Build technical capacity for implementation @ state level
- Marketing Prevention Impact to all (from Op-ed to journals to focus groups)

# And...Fostering New Measurement Development

- Business Case Measures
- Predictive proximal measures for L-T health
- Cost metrics
- Optimizing use of existing measures (e.g. PhenX, Toolbox)

Criteria: Specificity to context, publically available, usable, actionable, understandable, developmentally appropriate

# Cross-Sectoral Opportunities

- Harmonization of data across sectors; Information exchange
- Clearinghouse of EBPs
- Improving measurement of Health/MH in JJ/Foster Care/CW
- Understanding knock-on benefits beyond the sector (e.g. Planting Trees)

# There was so much more but...
