Compendium Updates

- Total: 84 EBIs for HIV risk reduction
- Added EBIs for ART adherence
- New chapter added on Linkage and Retention in Medical Care.

2009 Compendium of Evidence-Based HIV Prevention Interventions

The 2009 Compendium is now available and includes 69 evidence-based HIV behavioral interventions identified from the scientific literature published through June 2009. There were no new community-level interventions identified in this review of the literature.

The new interventions include 6 individual- and group-level interventions (added on August 24, 2009).

The 6 new individual-level and group-level interventions are:

Best-Evidence Interventions:

- Female Condom Skills Training
- HORIZONS
- Many Men, Many Voices (3MV)
- Motivational Interviewing HIV & Partner Violence Risk Reduction

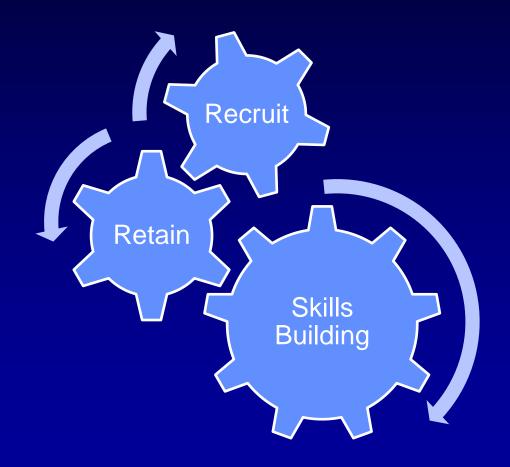

Delineate the roles of the original efficacy researchers in the dissemination process

- What is the intervention?
- What is fidelity?

An intervention is a chain of technologies

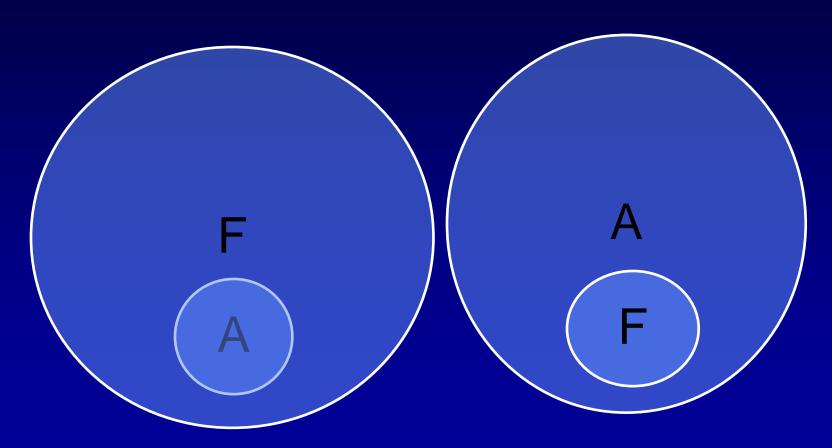

Marketing evidence-based public health

- Societal sectors and social networks
- Incentives
- Consumer choice
- Issues management

Adaptation vs. Fidelity

Technology Exchange and Colearning

- Intervention materials should be living documents that are continually updated based upon experiences in the field.
- Deliver proactive capacity building/technical assistance.

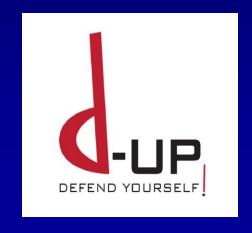

Implementation

A process of iterative steps that are informed by both behavioral science expertise blended with local knowledge.

Program Evaluation of Evidence-based Interventions

 Build evaluation capacity in stages moving from formative program evaluation to process monitoring to process evaluation and then to outcome monitoring.

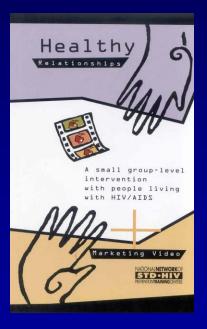

Sustainability

- Just what do you want sustained?
 - Programs and services?
 - o Generalizable concepts?
 - o Capacity?

Thank You
