“Informatics Needs and Challenges in Cancer Research”

February 28, 2012

The path forward: An idea to overcome the digital dilemma by...

- **LEVERAGING** the successes of the pioneers
- **EXPLOITING** existing assets/capabilities
- **PLAYING** to the strengths and needs of each constituency in biomedicine

The coalition is...

The coalition is...

A non-profit membership organization comprised of all stakeholders in the cancer community who are deeply committed to actualizing a common vision of data liquidity to achieve personalized cancer medicine and the rapid learning healthcare system.

What's data liquidity?

Rapid, seamless, secure exchange of useful, standards-based information among authorized individual and institutional senders and recipients.

Some exemplars of data exchange

- The Cancer Genome Atlas

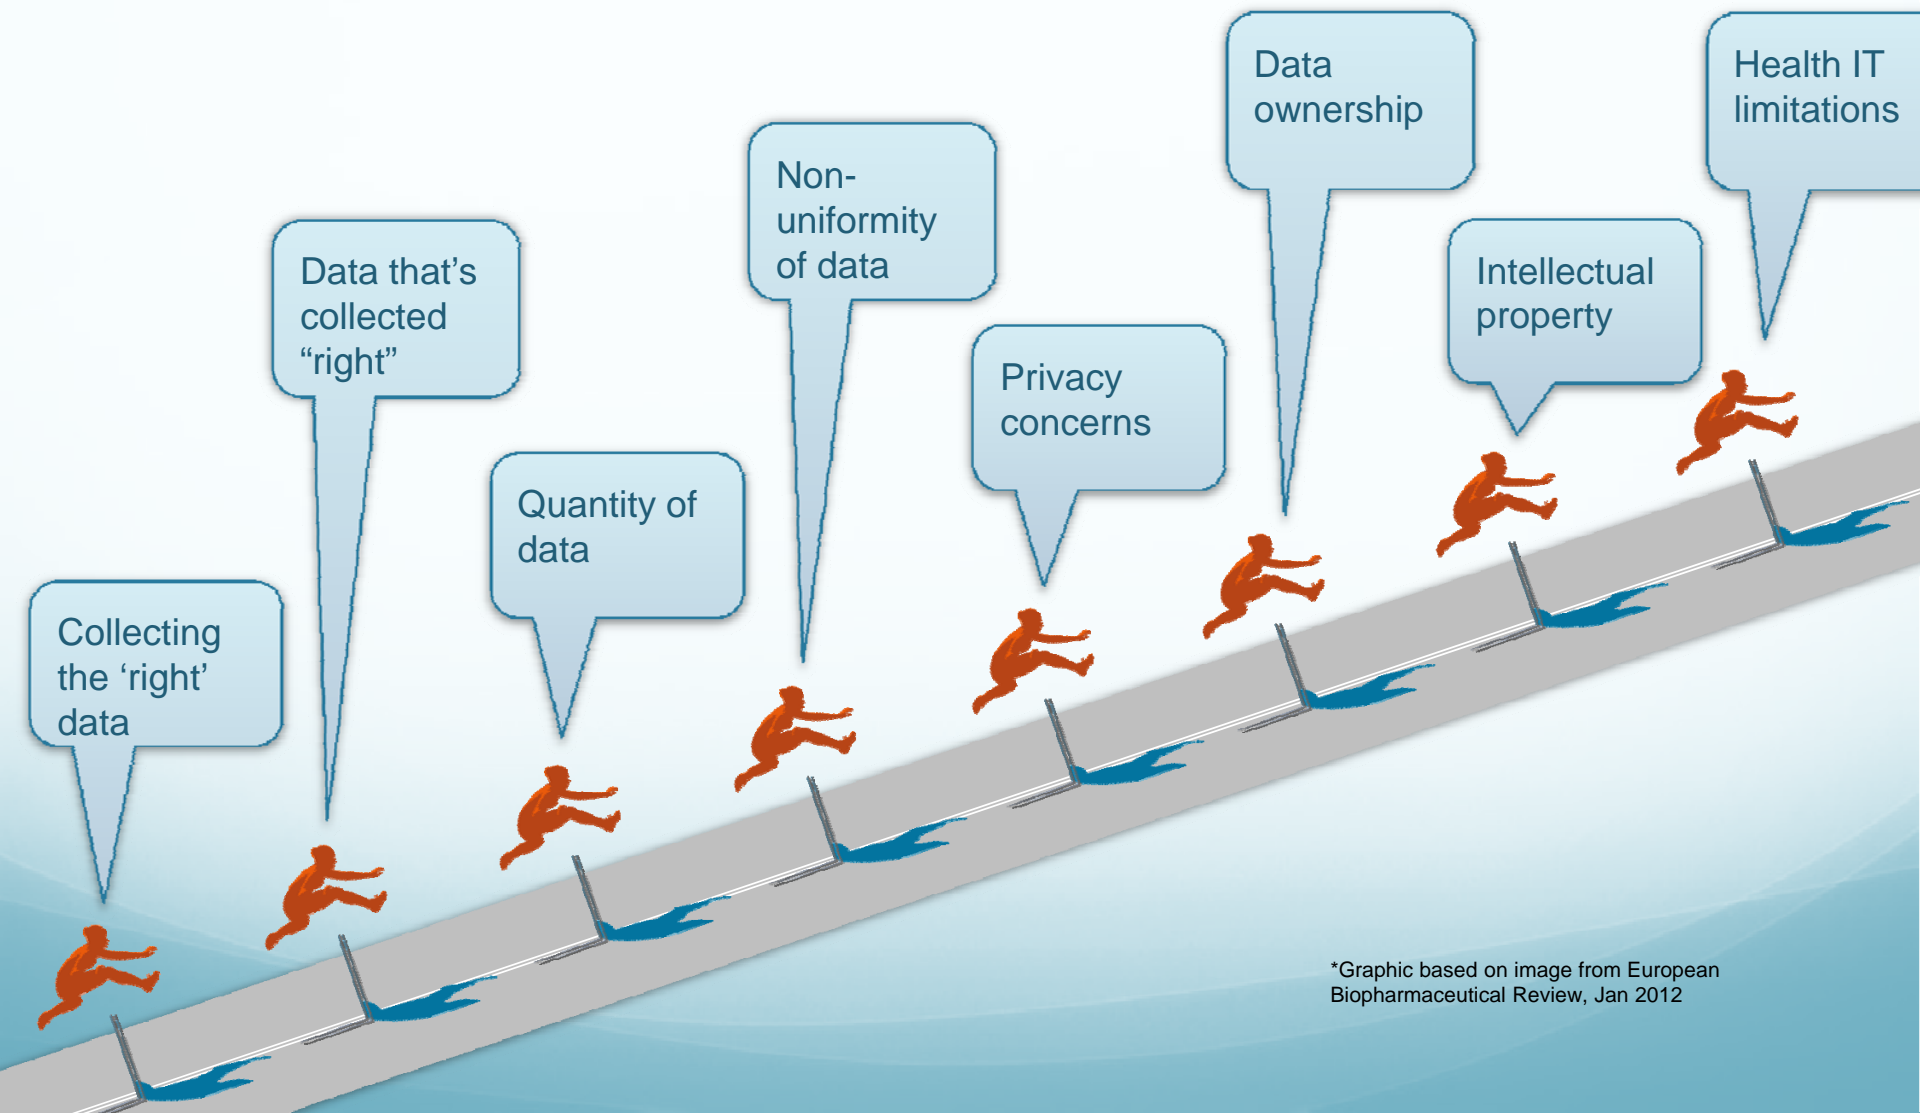

- BRIDG (Biomedical Research Integrated Domain Group)

- I-SPY 2 Trial

Why don't we have widespread data liquidity yet?

*Graphic based on image from European Biopharmaceutical Review, Jan 2012

What's the opportunity if we get it right?

The diagram features a background split into orange and blue quadrants by a diagonal line. A grey ribbon with binary code (0s and 1s) runs diagonally across the center, forming an 'X' shape. At the intersection of the ribbon, there is a small circle. Two speech bubble-like boxes are positioned on either side of the intersection. The box on the left is light orange and contains the text 'Personalized Cancer Medicine'. The box on the right is light blue and contains the text 'Rapid Learning Healthcare System'.

**Personalized
Cancer Medicine**

**Rapid Learning
Healthcare System**

Proposed coalition principles

- Research and clinical care can benefit from collection and analysis of all relevant (and potentially relevant) information, recorded in **standards-based formats** and curated through appropriate governance structures.
- Biomedical innovation and achievement of personalized cancer care can be accelerated and improved by facilitating **connectivity and seamless data exchange** among research and care collaborators.

Proposed coalition principles, cont'd

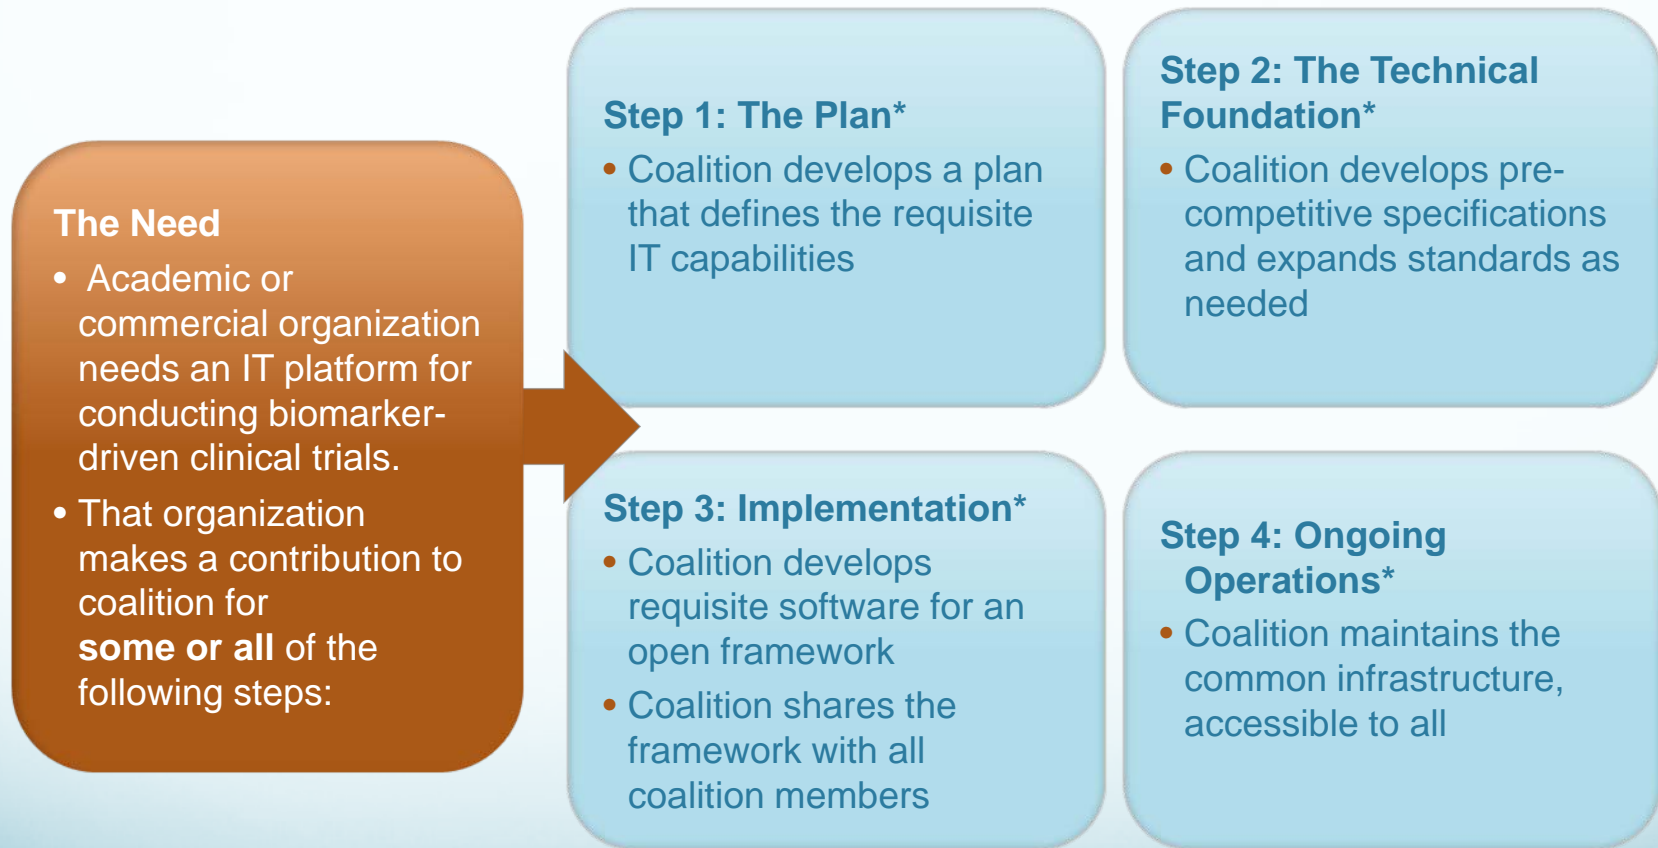

- Open information technology frameworks – which define standards by which technology components can interoperate – provide such capability through **open interfaces**, enabling researchers to seamlessly capture, aggregate, integrate, analyze, interpret and transmit data.
- Progress toward a connect biomedical community that benefits all health care stakeholders can best be implemented in a **pre-competitive setting**, where all participants are free to contribute and partake of components.
- **Open technology frameworks** – which can facilitate the interface between open source and/or commercial components – must be shared freely.

The coalition could deliver rapid, seamless data exchange...

- Facilitated by interoperability...
- Driven by just-in-time standards...
- Implemented in small-scale capabilities that are open at the interfaces...
- Developed incrementally and iteratively...
- To address specific and immediate needs...
- And then integrated in a coordinated, systematic way...

So that over time those capabilities roll up to a national system

The strategy is to build capabilities that address specific, acute problems

** The Coalition could select the most appropriate vendors from among its members and/or from the larger community of academic/commercial providers.*

Range of potential coalition activities

- Convene
- Advocate
- Mobilize participation
- Serve as honest broker
- Select and apply standards; catalyze standards development where none exist
- Provide consulting and project management services, via contracts to members
- Catalyze the building of capabilities that serve immediate needs, via contracts to members or others
- Leverage successful models of research-enhancing data exchange
- Act as “sherpa” to advance projects through to completion
- Coordinate/integrate capabilities leading up to a national system

Coalition governance

- Non-profit to preserve ‘honest broker’ role
- Potential for 501(c)(6) to imitate Chamber of Commerce
- Board of Directors with representatives from multiple constituencies

Coalition funding/sustainability

- Membership fees, on a sliding scale
- Consulting fees
- Project management fees
- Foundation grants
- Government support

How would all this roll up to a national system of data liquidity?

- Coalition members would be making a commitment of time/resources, and would be vested in the success of the resulting capabilities
- Each capability would address a specific problem defined by the user; once delivered, the capability would be shared across the community
- The Coalition would consistently seek to integrate and promulgate the capabilities, rather than viewing them as one-off examples
- Those who use the effective digital frameworks would gain competitive advantage (and vice versa)
- As in virtually all other industries, biomedical users are likely to overwhelmingly demand/expect the benefits of interoperability once they get used to it

How would the coalition be different?

What it is...

- Hybrid model in which all gain the benefit of data exchange through open interfaces, while commercial IT companies can be remunerated for their proprietary products/services
- A testbed for executing interoperability
- An open forum that seeks members from all constituencies
- A way to augment the role of ASCO, AACR, et al.
- A vehicle for ensuring that one-off models contribute to an overall national capability
- A strategy for building on whatever has already been developed

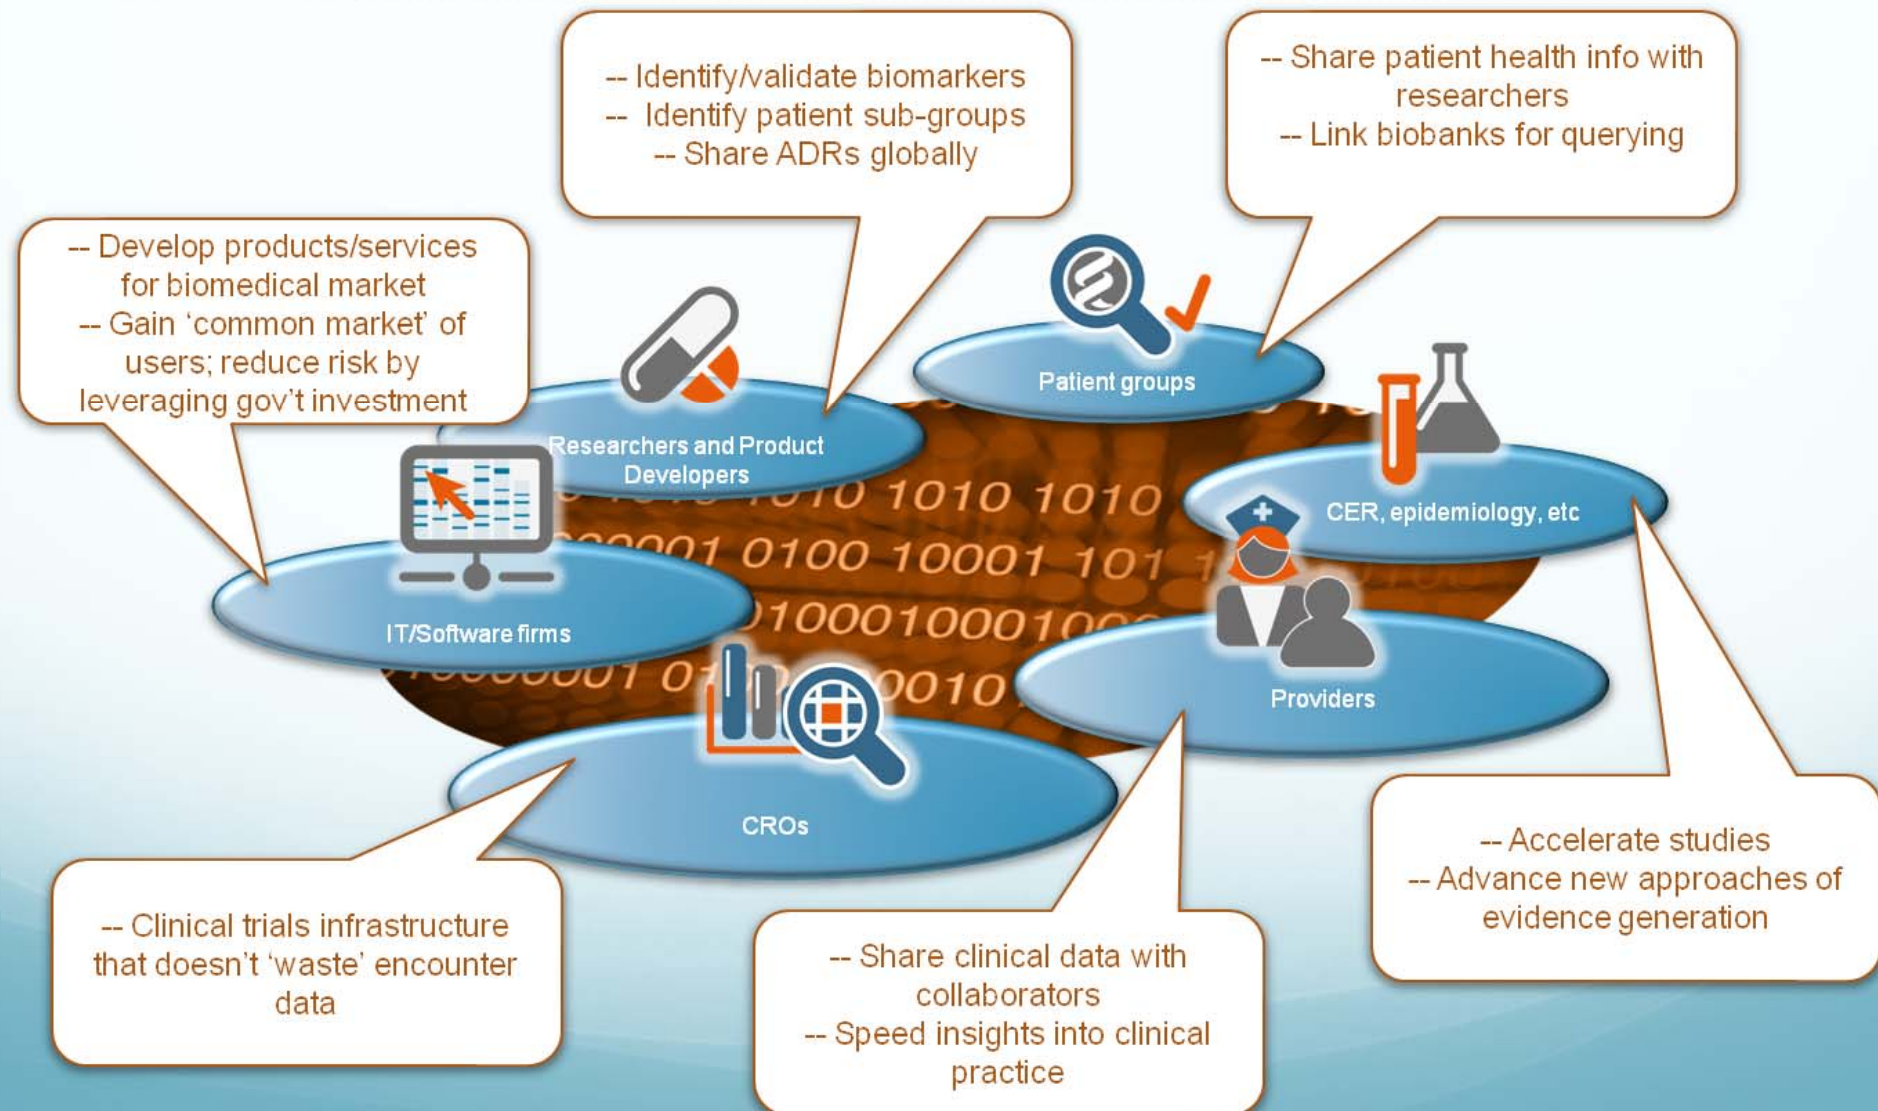

What it's not...

- A data aggregator
- A way to benefit just one single constituency
- A competitor to standard-setting bodies
- An initiative 'owned' and led by government
- A way to undermine or disrupt proprietary software systems
- A way to force data-sharing where it is not desired
- A universal collection of perfected standards that are developed without intent for practical usage

The impact of the coalition

The impact of the coalition

The impact of the coalition

The Coalition could achieve benefits for all constituencies
