National Science, Technology, and Security Roundtable

SOUTHERN REGIONAL MEETING

MARCH 7 2024

Texas A&M University

REGISTER TO ATTEND

If you have an interest in research security issues, this is your opportunity to engage with members of government and the academic, law enforcement, and national security communities. The meeting will be structured to:

- Discuss best practices on research security by universities, research institutions, and industry;

- Hear concerns from universities, research institutions, and industry about foreign research security threats;

- Gather input on the impact federal actions on research security are having;

- Raise awareness of and identify tools to facilitate research and promote research security and integrity; and

- Hear the latest updates on NSPM-33, the CHIPs and Science Act security requirements, and other regulations from federal agency representatives.

Engage with Roundtable Members and panelists on research security requirements, challenges, and solutions.

The **National Science, Technology, and Security Roundtable** was established in 2020 to provide a neutral venue where individuals from the national intelligence and law enforcement communities can meet with representatives from industry and the academic research community to discuss current threats, benefits, and potential risks.
