

# Designing Beyond - Improving Airport Operations through BIM

September 22, 2020

# Mark Day

## Blue Grass Airport

Q Director of Development and Facilities

# Five Ways to Get Involved!

Visit us online:

[www.trb.org/ACRP](http://www.trb.org/ACRP)

# Jack Ray

## Principal Investigator

- Vice President and COO, CCI Engineering Services
- CM-BIM
- Over 60 BIM Projects in Aviation, Healthcare, Universities and Public Utilities
- 30+ years of technology and information management experience

# Angela Newland, P.E., A.A.E.

- Senior Project Manager, CCI Engineering Services
- Former Assistant Director of Aviation – Airport Development, Broward County Aviation Department (FLL, HWO)
- Former Vice President of Planning & Engineering, Columbus Regional Airport Authority (CMH, LCK, TZR)

# Josephine Pofsky

## San Francisco International Airport (SFO)

- Director of Infrastructure Information Management
- Oversees both enterprise GIS and BIM operations
- Technology visioning lead for Planning, Design and Construction

# ACRP Report 214

## Designing Beyond –Improving Airport Operations through BIM

**Mark Day, Blue Grass Airport - Moderator**

**Jack Ray, CCI Engineering Services**

**Angela Newland, CCI Engineering Services**

**Josephine Pofsky, San Francisco International Airport**

# ACRP Report 214 Oversight Panel

Mark J. Day, Blue Grass Airport, Panel Chairman

Eddie R. Clayson, Salt Lake City Department of Airports

Jennifer L. Mims, Jacobs Engineering

John M. Payne, Pueblo Technology Group, Inc.

Mindy J. Price, Direct Effect Solutions, Inc.

John A. Walewski, Texas A&M University

Danielle J. Rinsler, FAA Liaison

Paul J. Eubanks, Airports Council International – North America Liaison

Christine Gerencher, TRB Liaison

Marci Greenberger, ACRP Senior Program Officer

# ACRP Report 214: BIM Beyond Design Guidebook Overview

- Assist airports in developing the business case to use Building Information Modeling (BIM) for asset management
- Provide guidance in developing BIM strategy, identifying stakeholders, determining BIM governance structure, and establishing BIM performance metrics
- Help airports identify how to scale the use of BIM

# Webinar Agenda

- ➔ 1. Major components of a comprehensive, lifecycle BIM program - Angela
- ➔ 2. Metrics to establish effective BIM controls and to measure BIM program success - Jack
- ➔ 3. Overview of airport survey data on current uses of BIM – Angela
- ➔ 4. Airport Case Studies – Jack Ray and Josephine Pofsky, SFO

# Learning Objectives

## At the end of this webinar, you will be able to:

- Describe lifecycle BIM practices
- Identify how to implement BIM effectively

# Major components of a comprehensive lifecycle BIM program

## BIM Organizational Assessment

- Perform a BIM Needs Assessment
- Develop a Data Flow Diagram
- Perform a BIM Capabilities Assessment
- Develop a BIM Roadmap

# Major components of a lifecycle BIM program – Korean Rail BIM Roadmap

## Railway BIM2030 Roadmap

People / Process / Technology

### BIM Goals

#### Procurement & Planning

- Communication between managers and project participants using BIM visualization tools
- Application of AR/VR for design reviews or public hearings

#### Design Expansion of BIM application

- Application for environmental assessment
- Design review and coordination, budget review
- Elimination of unnecessary social cost using visual information
- Visualization/digitalization of construction plans and budgets

### PEOPLE

Culture  
Organization  
Education

#### Company-wide level

Company-wide BIM team

Monitoring, support, and management of multiple BIM projects

#### Individual project manager level

Ability to manage the 2D to 3D conversion process  
Ability to handle BIM models

Ability to lead two-track BIM Design review using BIM

#### Coordination process

Design coordination between a limited number of team members

Increased importance of coordination between drawings and BIM models  
Limited use of BIM for specific issues by specific teams

### PROCESS

Policy  
Infrastructure  
Service & Reward  
Work Process

#### Tendering and management process

Application of existing tendering and project management methods

Little use of the lowest bid or the like  
Recommended use of services and CM at risk

### TECHNOLOGY

Software  
Hardware  
Information

#### Fundamental technology

BIM authoring tools  
BIM model checkers  
BIM viewers

BIM analysis tools  
Detailing tools  
Interoperability

#### Management technology

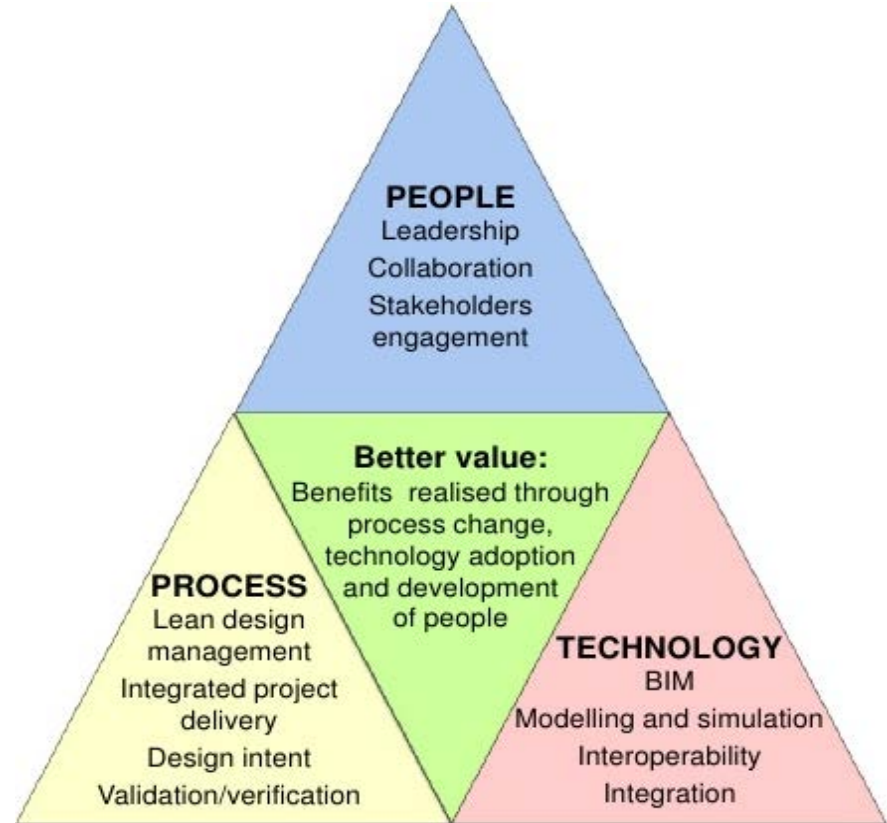

A system that enables project participants to share BIM models and error reports acquired through design conversion (e.g., CDE, Big Room System)  
A system that tracks and manages design errors

Coordination technology between 2D and BIM processes  
(e.g., 3D scanning, model version management)

# Major components of a comprehensive lifecycle BIM program

## Prepare Stakeholders for Implementation

- Develop a BIM Capabilities Maturity Model
- Identify the Airport's BIM Champion
- Determine who will maintain the Airport's BIM
- Provide BIM training

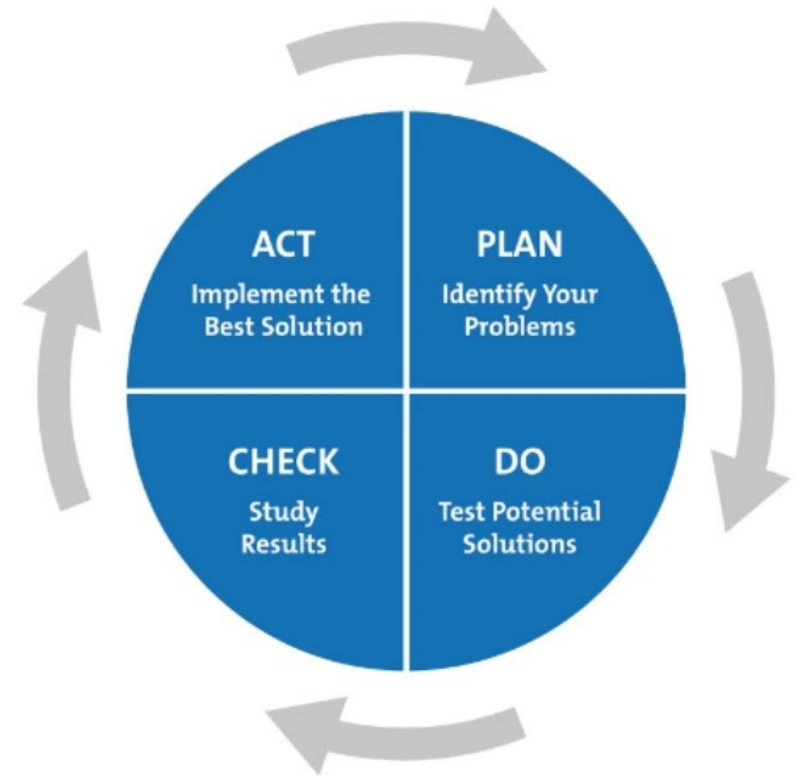

Source: buildingSmart Finland

# Major components of a comprehensive lifecycle BIM program

## Financial Analysis

- BIM Pilot Program
- Benefits and costs of BIM
- Business Case for BIM
- BIM Return on Investment (ROI) goals

Source: Six Sigma Plan Do Check Act Cycle

# Major components of a comprehensive lifecycle BIM program

## BIM Implementation

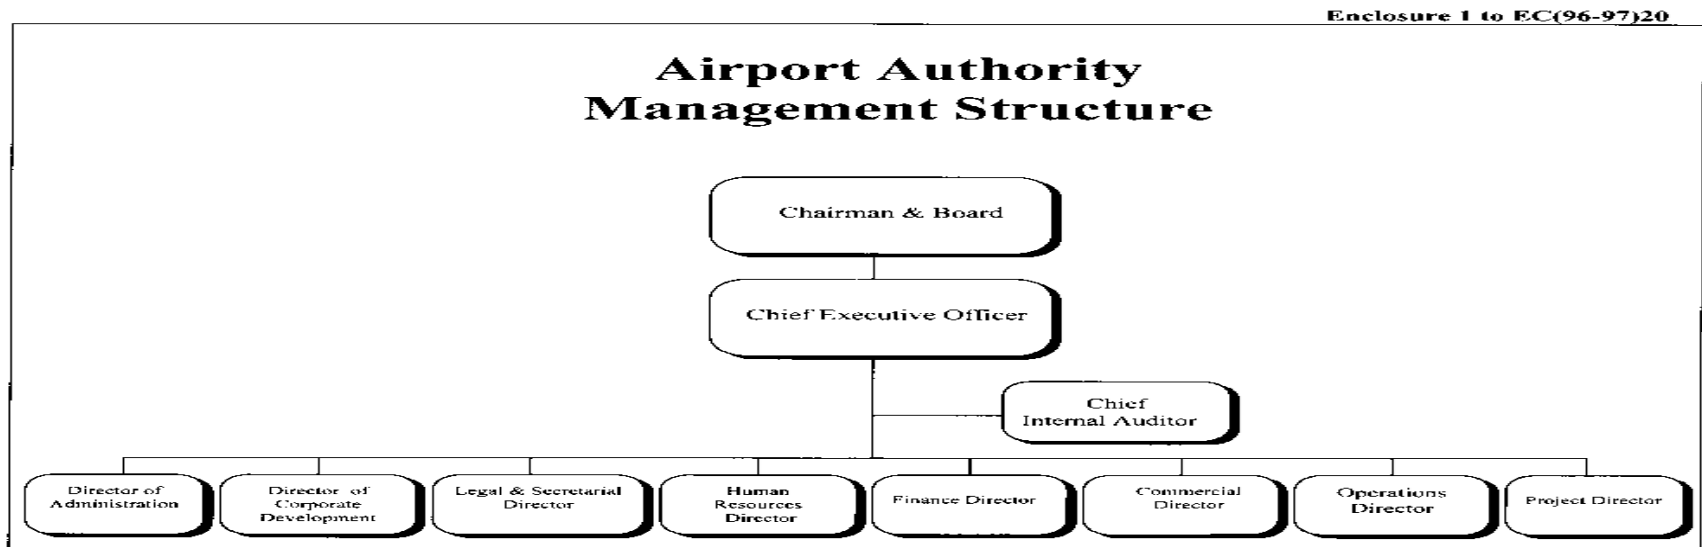

- Technical Architecture
- Integration of BIM with existing systems
- Standards, Execution Plans, Required Data Elements

# Major components of a comprehensive lifecycle BIM program

## BIM Controls

- Governance
- Progress Metrics
- Legal and Liability Issues

# Metrics to establish effective BIM controls and measure success

## Maintenance Planning

- Wrench Time/Average Time to Resolve Issues
  - Reduced time for field investigations
  - PM tasks bundling reduces travel time
  - Design for maintainability reduces maintenance time per asset

# Metrics to establish effective BIM controls and measure success

## Maintenance Planning

### → Asset Uptime

- Increased wrench time reduces PM backlog and increases asset uptime

### → Condition Assessment

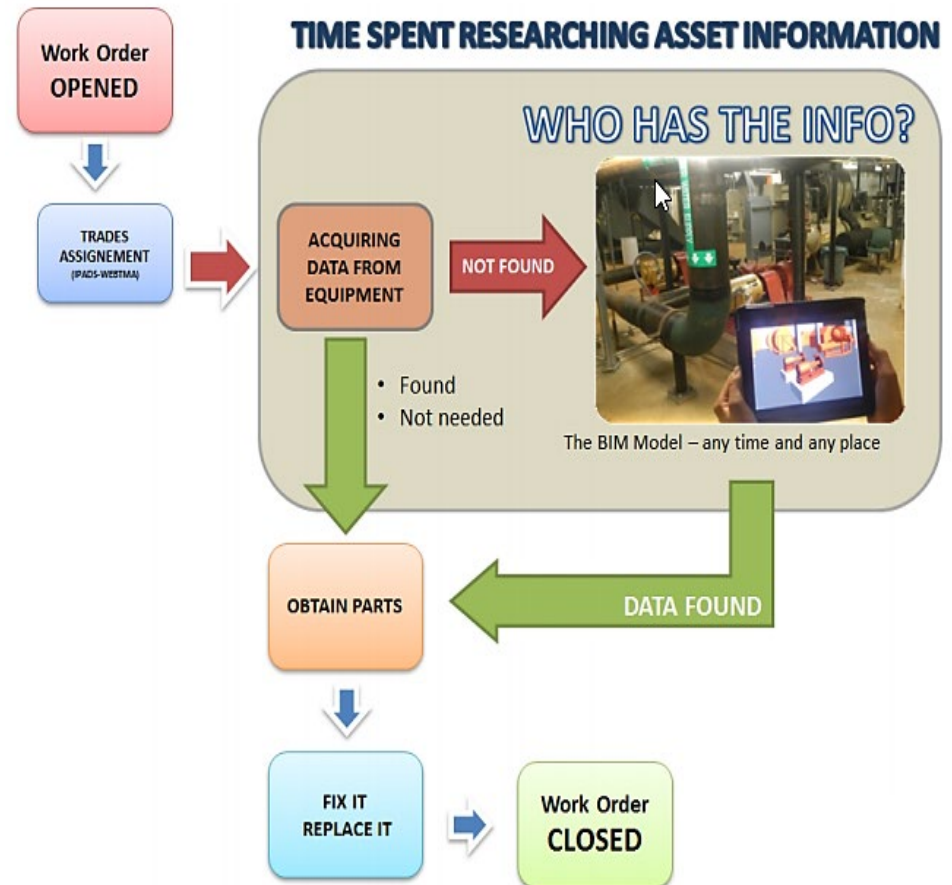

- Spatial analysis/correlation of asset condition deficiencies with environmental and PM backlog issues

# Metrics to establish effective BIM controls and measure success

## Asset Management

- Time to enter new assets after capital project completion
  - BIM to Enterprise Asset Management (EAM) exports/ integration
- Asset Inventory
  - Reduce reliance on institutional memory
- Capital Planning
  - Spatial visualization of condition deficiencies, asset end-of-life

# Metrics to establish effective BIM controls and measure success

## Additional Metrics

### → Contractor BIM Capabilities

- BIM submittal reviews/report cards
- Ability to meet BIM PxP requirement/standards
  - Level of Development
  - Equipment Information Requirements (EIR)
  - Coordination capabilities

# Metrics to establish effective BIM controls and measure success

## Additional Metrics

### → Airport Organizational BIM Capabilities

- Existence of BIM standards and processes
- BIM accessibility to staff/number of BIM accesses
- # of BIM information exchanges with other info systems
- % of staff with BIM training

# Metrics to establish effective BIM controls and measure success

## Data Collection

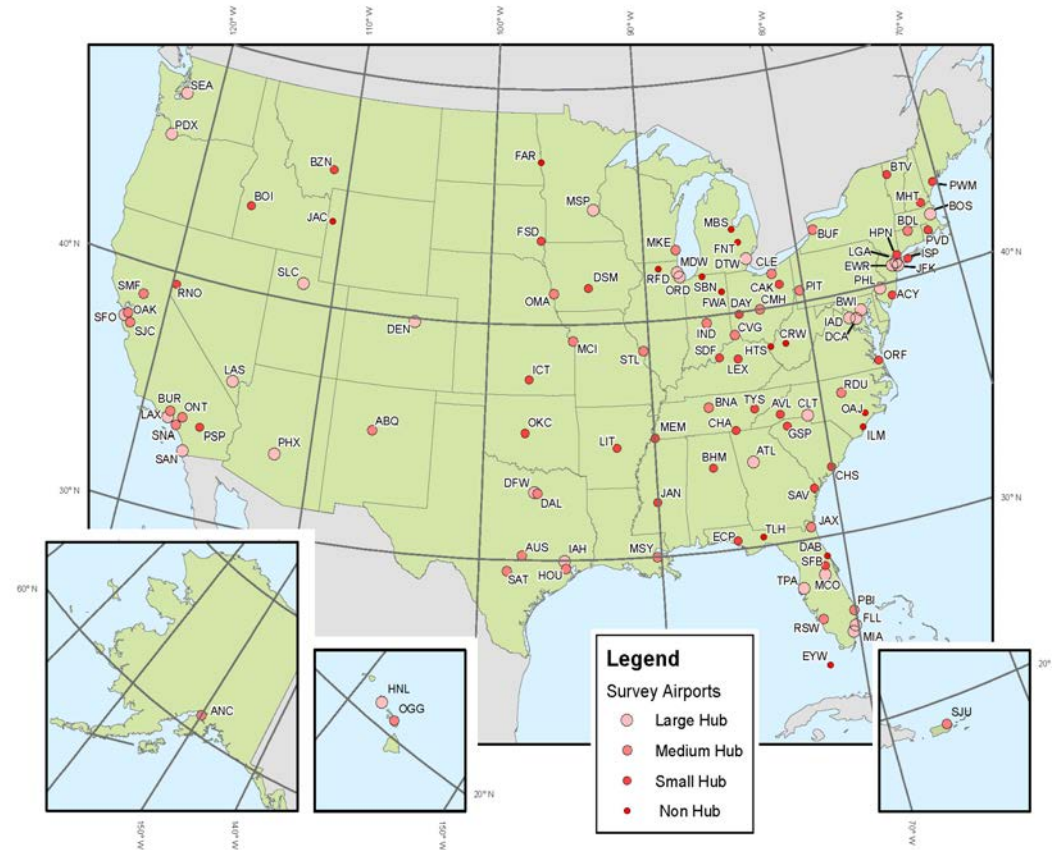

- BIM tied to airport coordinate system
- % of capital projects where BIM is utilized
  - Defined criteria for when BIM is required
- % of managed facility space included in BIM/SlimBIM
- Average time for integration of new assets with BIM & EAM systems after new capital projects
- Well defined asset hierarchy, asset attributes used with BIM & EAM

# Airport survey data on uses of BIM

## Summary

- 64 U.S. airports responded
- Most from FAA Eastern & Southern Regions
- 75% from large & medium hub airports
- Less than 40% are using BIM
- 30% have used BIM in operations & maintenance

--U.S. Airports Receiving Surveys--

# Airport survey data on uses of BIM

## Summary

- 50% maintain BIM after project completion
- Only 10% expect BIM to not be worth the cost
- No airport had a complete BIM for all facilities
- No airport had complete and accurate CAD for all facilities
- 75% plan on using BIM in the next 5 years

# Airport survey data on uses of BIM

## Summary

- Few airports have a BIM Manager
- BIM Manager usually resides in Engineering Department
- 63% rely solely on BIM consultants
- 50% have BIM Standards, 40% have BIM Execution Plans
- 53% have standard contract language for BIM
- 20% have more than 5 completed BIM projects

# Non-airport entities using BIM

## Case Studies

- Ohio State University
- Western Michigan University
- New York Presbyterian Hospital
- Perth Children's Hospital
- New Royal Adelaide Hospital
- Sydney Opera House

# Airport Case Studies - DEN

## Denver International Airport BIM:

- BIM Standards and Processes Developed
- Contractor BIM Capabilities Development
  - Submittal Reviews/Report Cards
  - Contract Language
- Organizational BIM Capabilities Maturity
  - Dedicated BIM Team
  - All major facility spaces scanned and BIM accessible
  - All major projects performed with BIM requirements
  - Post construction BIM uses
  - BIM ROI measurements

# Airport Case Studies - MassPort

## Massachusetts Port Authority

- BIM Roadmap developed
- BIM Standards and Processes
- BIM supports Lean Process Flows
  - Reduces cost of facility data management
  - Predictive Maintenance capabilities
- Integrated facility management platforms
  - Life cycle planning and management

# Airport Case Studies - SFO

## San Francisco Int'l Airport BIM:

- BIM as a tool to support Progressive Design Build (PDB) methodology
  - Increased collaboration/communication
  - Reduced change orders
  - Reduced schedules
  - Improved quality
  - Improved organizational readiness when new facilities come online
- Rapid post-construction asset creation in EAM

Engagement Strategy (Execution Roadmap)

The BIM Deliverable Checklist tracks various project milestones and deliverables. Key entries include:

- 10/23** 3D0 3D7 - Meeting - Initial PM Project Orientation
- 10/23** 3D0 3D7 - BIM Submission - BIM Content Spec Review
- 10/23** 3D0 3D4 - BIM Submission - Building Scheduling for Building Number Assignment
- 10/24** 3D0 3D7 - Meeting - PM&E Orientation
- 10/24** 3D0 3D7 - Meeting - 3D0 3D7 Standards Overview
- 10/24** 3D0 3D7 - Meeting - 3D0 3D7 Standards Checklist & BRIGGS Overview
- 10/24** 3D0 3D7 - BIM Submission - Design 3D0 Plan
- 10/24** 3D0 3D4 - BIM Submission - Coordinate System Setup (if required)
- 10/24** 3D0 3D7 - Milestone - Program Completion
- 10/24** 3D0 3D7 - Milestone - Schematic Design Start
- 10/24** 3D0 3D7 - Milestone - Schematic Design - Field
- 10/24** 3D0 3D7 - Milestone - Program Development - Start
- 10/24** 3D0 3D7 - BIM Submission - Space Numbering Review
- 10/24** 3D0 3D7 - BIM Submission - Space Numbering Review
- 10/24** 3D0 3D7 - BIM Submission - Family Name Review
- 10/24** 3D0 3D7 - BIM Submission - Family Name Review
- 10/24** 3D0 3D7 - BIM Submission - Attribute Review
- 10/24** 3D0 3D7 - BIM Submission - Tag Numbering Review
- 10/24** 3D0 3D7 - Milestone - Equipment Submittal Review
- 10/24** 3D0 3D7 - BIM Submission - Core Track MFA CD Documents Review
- 10/24** 3D0 3D7 - BIM Submission - Pre-Construction Meeting
- 10/24** 3D0 3D7 - BIM Submission - Project BRIGGS Package and RFI
- 10/24** 3D0 3D7 - Milestone - Trade 4D Walkthrough
- 10/24** 3D0 3D7 - Milestone - Trade 4D Walkthrough
- 10/24** 3D0 3D7 - Milestone - Trade 4D Walkthrough
- 10/24** 3D0 3D7 - Meeting - Core Track BIM Expansion Agreement (General)
- 10/24** 3D0 3D7 - BIM Submission - Post-4D BIM Expansion Agreement
- 10/24** 3D0 3D7 - Milestone - Construction Documents - Start
- 10/24** 3D0 3D7 - Milestone - Construction Documents - Field
- 10/24** 3D0 3D7 - Milestone - 3D0 3D7 Model Completion
- 10/24** 3D0 3D7 - BIM Submission - 3D0 3D7 Model
- 10/24** 3D0 3D7 - BIM Submission - 3D0 3D7 Model
- 10/24** 3D0 3D7 - Meeting - BIM Model Deliverables (to BRIGGS)
- 10/24** 3D0 3D7 - Meeting - BIM Model Deliverables (to BRIGGS)
- 10/24** 3D0 3D7 - BIM Submission - BIM Submittal Checklist
- 10/24** 3D0 3D7 - Milestone - Submittal Completion
- 10/24** 3D0 3D7 - Milestone - Submittal Completion
- 10/24** 3D0 3D7 - BIM Submission - Final Review Review

Deliverable Checklist (Performance Tracking)

The Model and Data Acceptance Criteria table defines the standards for BIM deliverables. Key categories include:

- Building Numbering:** Model Naming, Coordinate System Setup & Approved, SPOB Marker Placed & Approved, Sheet Numbering Setup & Approved, Space Numbering Setup & Approved, Family Naming Approved, Space Parameters Added to Model.
- Equipment Inventory:** Element Tags Created, Equipment Inventory Schedules Created.
- Data:** Project Attribute Values Populated, Common Attribute Values Populated, CA - Manufacturer and Model Number Populated, FM Attribute Values Populated, CA - Serial Numbers and Nomenclature Submittals Populated.
- General:** Confirm all attribute values match IAD requirements, Duplicate Elements Identified & Removed, All Rooms/Areas/Spaces Enclosed, Complete Coverage of Floorplan by Rooms Verified, Warnings due to Ropes, Separation Lines warnings eliminated, Warnings due to Duplicate Mark values eliminated, All Family F&S Cases resolved to under 1 MB, All CAD files linked to Model (No Imports), Warnings due to overlapping geometry eliminated, Documents Correct (Elements of Documents and Model), Design DWGs at Substantial Completion, As-Built DWGs at Final Closeout, Required CAD export match GIS/CAD Layer Requirements.

Model and Data Acceptance Criteria (Sign-off for Closeout)

# Collaboration Tools

Category	Check Description	Applicable Standard(s)	Setup & Program	SD	DD
Models	Building Number Requested & Assigned		●		
Models	Model Naming	BIM Guide	●		
Models	Coordinate System Setup & Approved	BIM Guide	●

Data	Confirm all attribute values match EAD requirements	EAD		○	○
Data	Confirm all attribute names match EAD requirements	EAD		○	○
General	Duplicate Elements Identified & Removed	Revit Standard		○	○
General	All Rooms/Areas/Spaces Enclosed	Revit Standard		○	○
General	Complete coverage of floorplan by Rooms Verified	Revit Standard		○	○
General	Warnings due to Room Separation Lines overlaps eliminated	Revit Standard		○	○
General	Warnings due to Duplicate Mark values eliminated	Revit Standard		○	○
General	All Family File Sizes reduced to under 1 MB	Revit Standard		○	○
General	All CAD files linked to Model (No Imports)	Revit Standard		○	○
General	Warnings due to overlapping geometry eliminated	Revit Standard		○	○
Documents	Correct placement of documents and model				
General	Design DWGs @ Substantial Completion				
General	As-Built DWGs @ Final Closeout				
General	Required CAD export match GIS CAD Layer Requirements				

SFO BIM INTEGRATION TEAM

## Model & Data Validation Report Transmittal

<b>Project Name:</b>	T1C
<b>Submitter:</b>	TBD
<b>Submittal Date:</b>	7/11/2019
<b>Milestone:</b>	9 Gate
<b>Report Author:</b>	Ryan Meacham
<b>Report Date:</b>	8/9/2019

**Report Contents:**

Cover Sheet/Transmittal
Tutorial
Coordinate System Checks
Model Fidelity
Model Fidelity Results
Appendix: MVR Corrective Actions

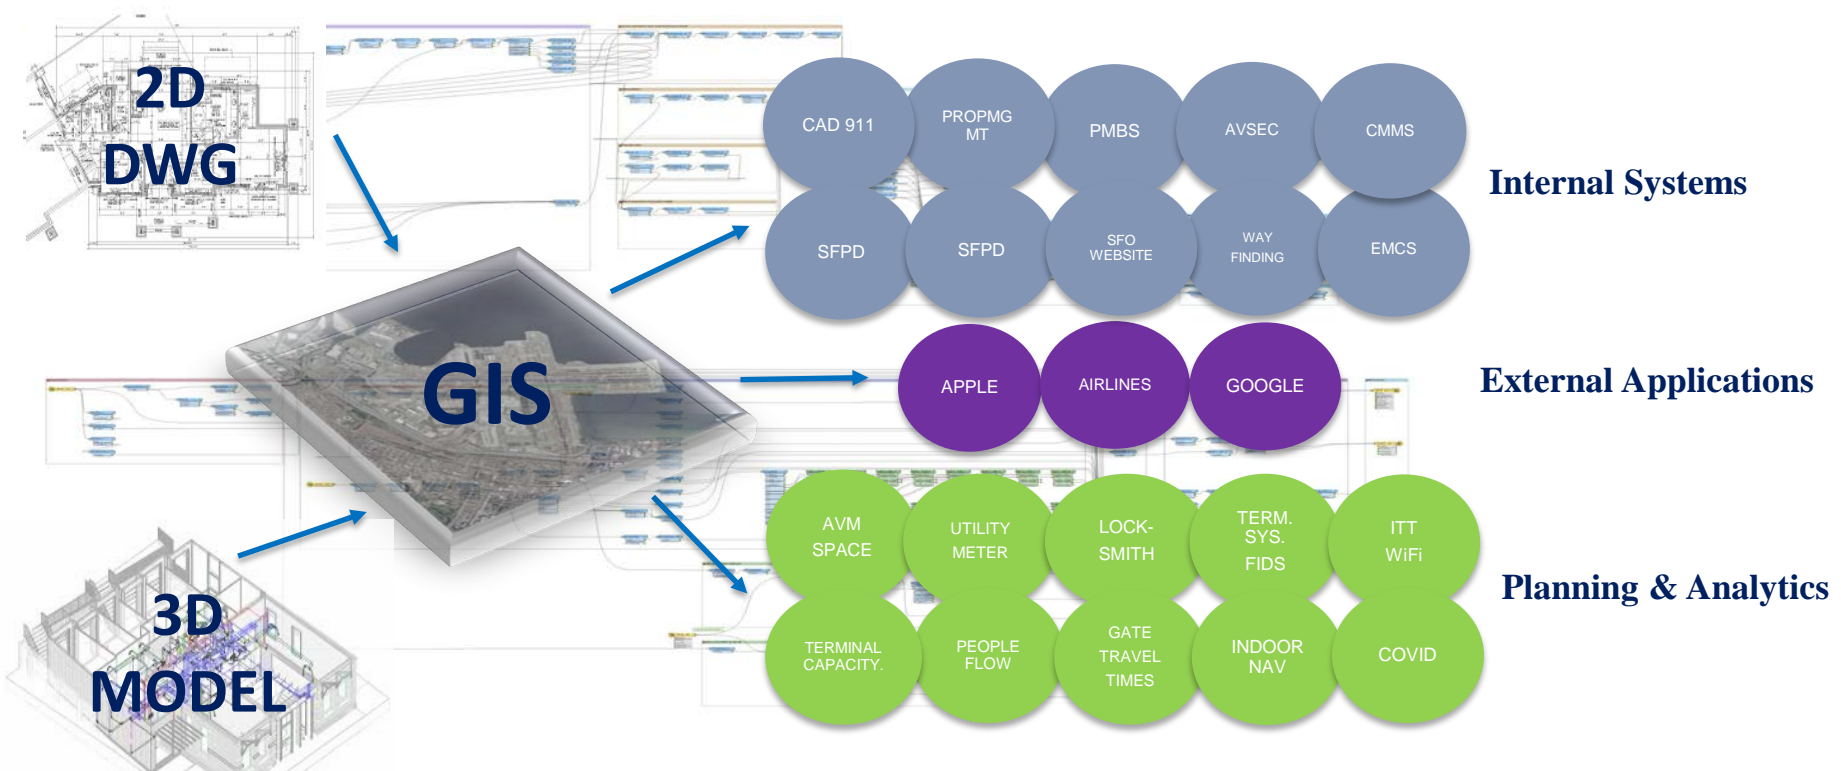

**Purpose:**

The Airport verifies the incremental development of models to avoid the need for last-minute, extensive clean-up or re-organization. The checks are based on current industry best practices and recommended modeling techniques. Refer to the SFO Revit Standard for further details. No checks should result in recommended corrective actions at project handover. Follow recommended corrective actions as appropriate after intermediate reports.

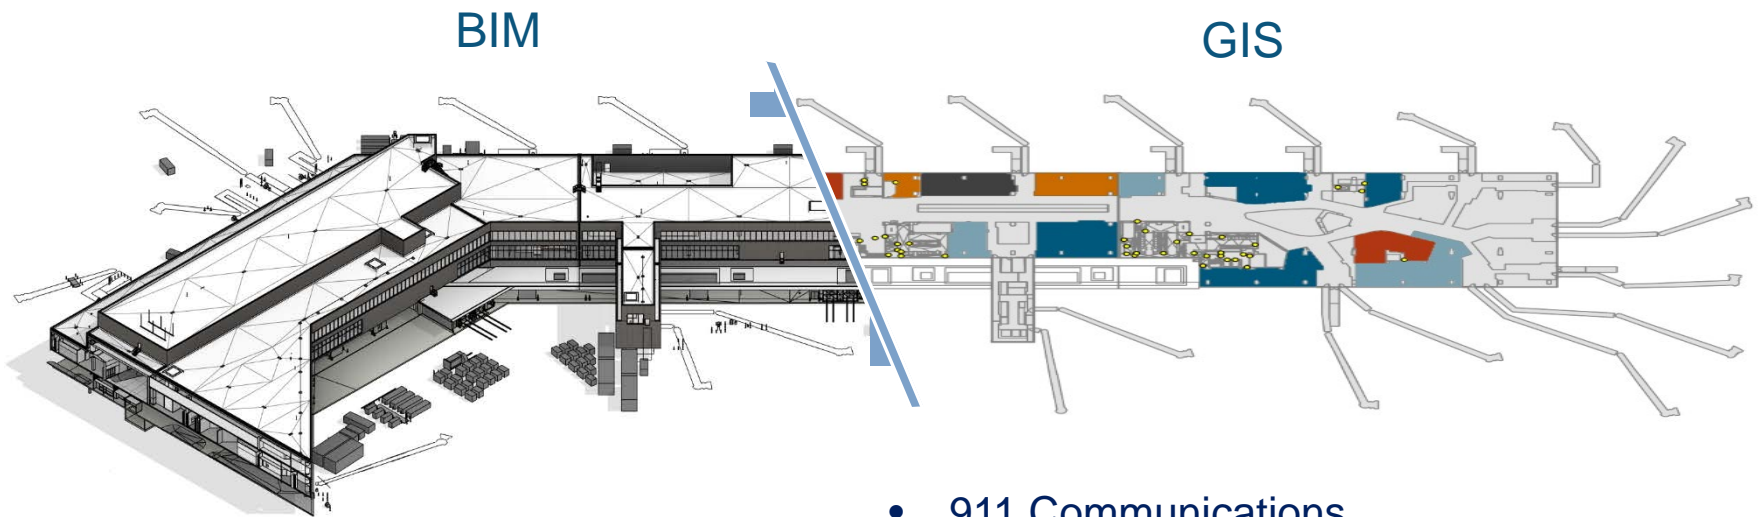

**List all models submitted below with the intended checks you wish the SFO BIM Integration Team to perform. Insert rows as needed. Please note, some checks are mandatory at all milestones and will be reflected accordingly.**

Submitted Models	Model Fidelity	Data Fidelity	Coordinate System
SFIA-T1C_A_EXT_GEN.rvt	Yes	Yes	Yes
SFIA-T1C_A_FURN_GEN.rvt	Yes	No	Yes
SFIA-T1C_A_INT1_GEN.rvt	Yes	Yes	Yes

# Summary – Improving Airport Operations through BIM

## ACRP Research Report 214

- Based on extensive research of airport and non-aviation BIM uses beyond construction
- Describes lifecycle BIM practices
- Identifies how to implement BIM effectively for each airport's specific needs
- Continued research is recommended as BIM continues to be more widely used in operations and maintenance

# FOR ADDITIONAL INFORMATION

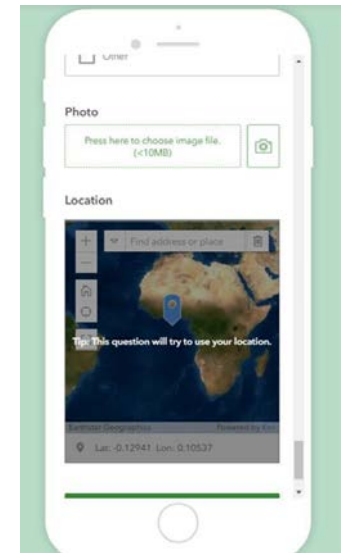

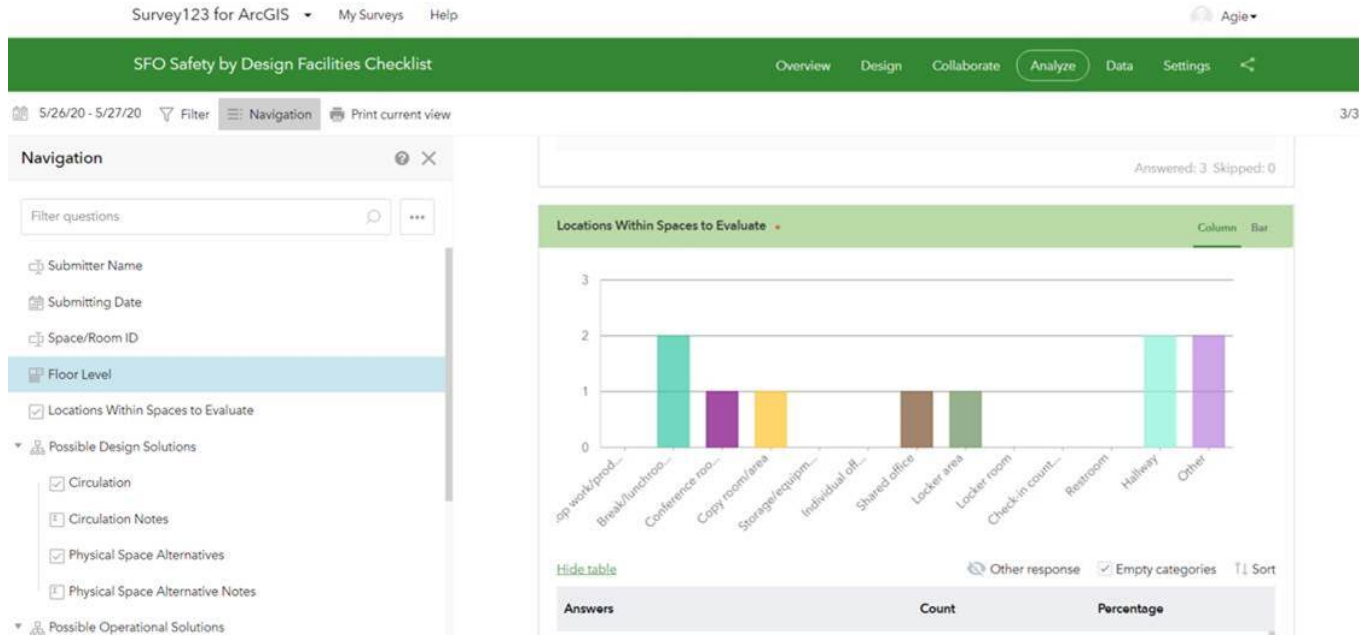

Jack Ray  
[jack@ccitechs.com](mailto:jack@ccitechs.com)

# BIM and Airport COVID Responses

- Facility disinfection planning tool
  - Surface cleaning and treatment specific asset attributes using CDC recommendations
  - Generate facility cleaning maps and “quantities” of surface types for budgeting and manpower scheduling
- BIM transit analysis tools can be used to plan required terminal modifications to enforce spatial distancing requirements and the impacts on airport capacity
- BIM and computational fluid dynamics (CFD) can be used to identify areas of low air flow/turnover where air filtration is not providing adequate protection- and design required HVAC system improvements
- BIM and lighting analysis tools can be used to optimize the placement of permanent/temporary UV lighting sources for overnight disinfection

# COVID Responses (SFO)

# ACRP is an Industry–Driven Program

- Managed by TRB and sponsored by the Federal Aviation Administration (FAA).
- Seeks out the latest issues facing the airport industry.
- Conducts research to find solutions.
- Publishes and disseminates research results through free publications and webinars.

# Other Ways to Participate

Become an Ambassador. Ambassadors represent ACRP at events and conferences across the country!

Sponsor or become an ACRP Champion. The champion program is designed to help early- to mid-career, young professionals grow and excel within the airport industry.

Visit ACRP's Impacts on Practice webpage to submit leads on how ACRP's research is being applied at any airport.

**Visit us online:**  
[www.trb.org/ACRP](http://www.trb.org/ACRP)

# Other ACRP Research on Today's Topic

Report 19A: *Resource Guide to Airport Performance Indicators*

Report 155: *Guidebook for Advanced Computerized Maintenance Management System Integration at Airports*

Report 172: *Guidebook for Considering Life-Cycle Costs in Airport Asset Procurement*
