The Decadal Survey: Guiding NASA Earth Science

- Cost-effectively implement next-generation capability to meet National Academies of Science objectives
- Advance technology, flight, research, modeling, data, and applications
- Position NASA Earth Science Division to maximize science and societal benefit

Earth Science to Action Strategy

Earth Science to Action

Virtuous Cycle

- User needs inform next iteration of programs, missions and initiatives

Public Understanding & Exchange

- Put more scientific understanding into public sphere
- Deliver applied science to users
- Participate in multi-way info exchange
- Use input to inform subsequent work

Solutions with Value to the Nation

- Offer models, scientific findings and info through Open-Source Science principles
- Support private sector development of applications of Earth observations
- Provide science applications and tools to inform decisions

Earth System Science & Applied Research

- Grow scientific understanding of Earth's systems
- Develop predictive models of dynamic Earth systems and tools to understand and adapt to changes

Foundational Knowledge, Technology, Missions & Data

- Technology innovation
- Earth observations missions
- Data collected from space, air and ground

Engaging our Stakeholder Community

Sharing Results of Earth Science Discovery

Two-Way Communication with Data Users, the Science Community, and the Public

Prioritizing engagement with data users:

- Earth Action Agriculture, Water, Air Quality and Private Sector outreach
- Early Adopters part of mission development requirements

Frequently updating the Earth science community:

- Earth Science Division monthly newsletter
- Earth Science to Action roundtables at 2024 AGU
- Town halls and community forums at AGU and AMS annual conferences
- Regular meetings with the National Academies Committee on Earth Science and Applications from Space (CESAS)

Meeting the public where they are:

- Earth Information Center locations at Smithsonian and Kennedy Space Center
- Congressional briefings and NASA Days on the Hill
- Earth Science Division stories, videos and social media designed to share knowledge – inspiring curiosity, innovation, and progress

NASA Earth Co-Develops Next-Gen Science and Tools with Data Users: Farm Program Example

2022-2024: On-site and field tours to farms, ranches, business and research institutions in Nebraska, Kansas, Iowa, Illinois & New York

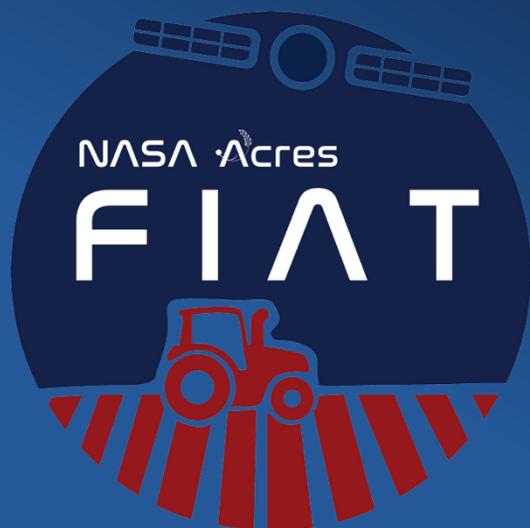

Finding out what kinds of data farmers need and how they need it delivered:

- Field visits to better understand challenges
- Bilateral meetings with major commodity groups to initiate projects
- NASA Acres: domestic consortium working directly with U.S. agriculture

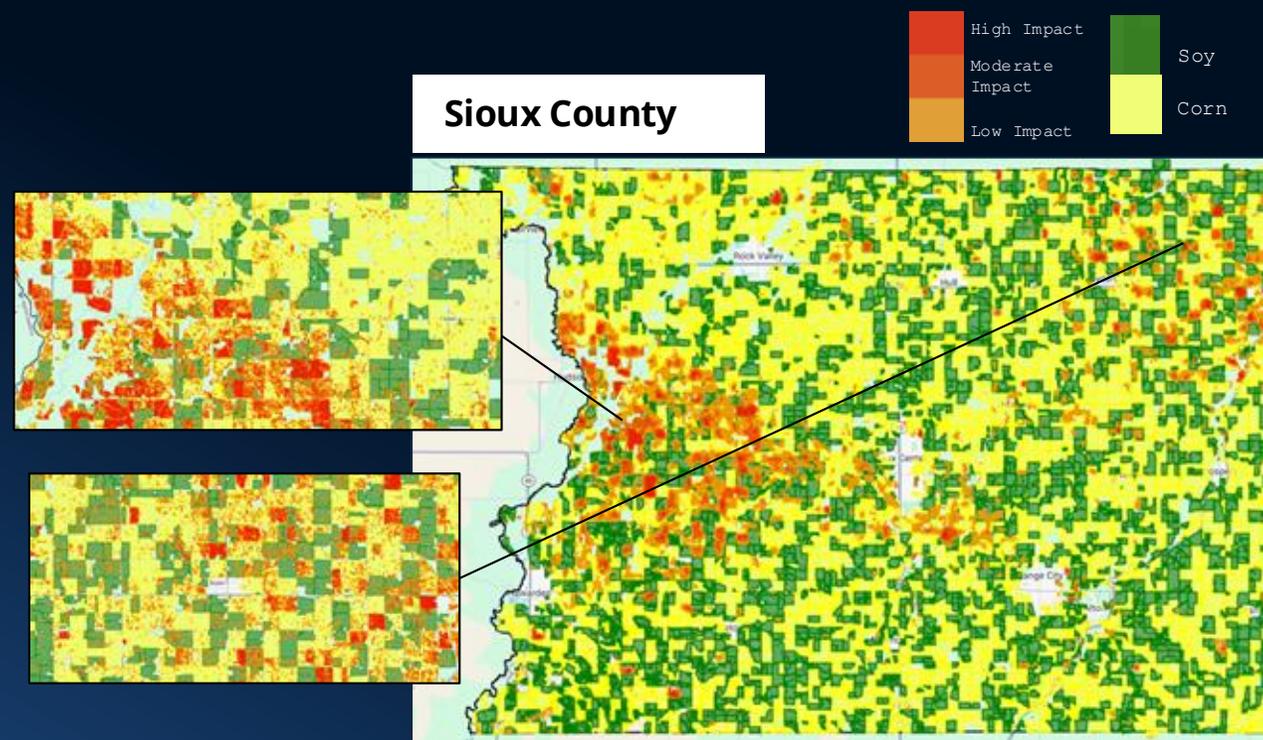

Acres

- Domestic agriculture consortium launched in 2023
- Acres brings together leaders from public & private sectors to put NASA data, science & tools into the hands of U.S. ag producers

**Farm Innovation
Ambassador Team
(FIAT):** Launched
March 2025 by NASA
Acres

NASA Acres Responds to July 28, 2025 Derecho in Iowa: Rapid Analysis of Damage for Gov. Reynolds & Iowa Dept. of Homeland Security & Emergency Management (HSEM)

- Sentinel-1 Synthetic Aperture Radar Data combined with crop type area estimates and yield estimates (e.g., USDA NASS Surveys)
- Estimates of damage to soybeans

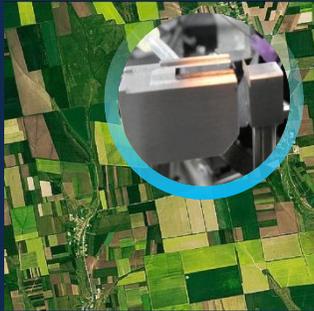

Advancing Technology

Earth Science Technology Office

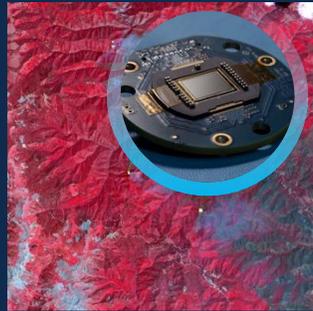

Key Technology Investment Areas

Earth Science Technology investments address a broad range of Earth observation needs. Maintaining some investment in all areas, with increased investment in QG Gradiometry:

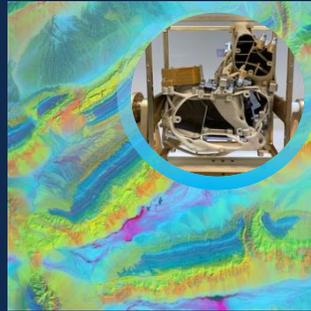

Electro Optical Earth Imaging

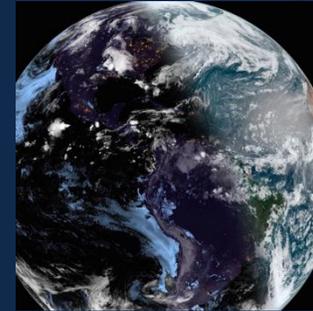

SW / MW / LW Infrared

Hyperspectral

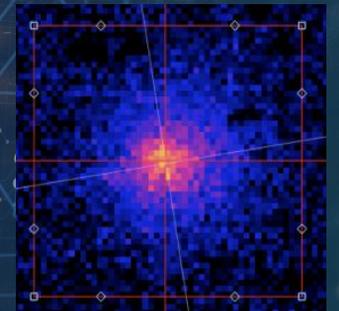

Multispectral

Quantum Sensing

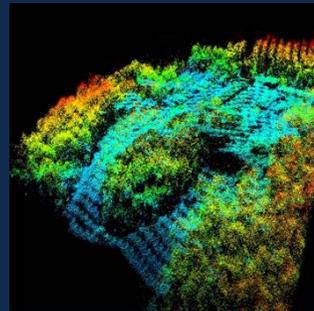

Quantum Gravity Gradiometry

Radar

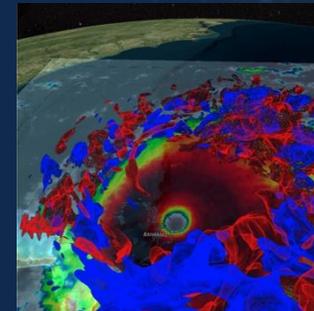

Laser / LiDAR

Quantum Computing

AI / ML Modeling

Digital Twins

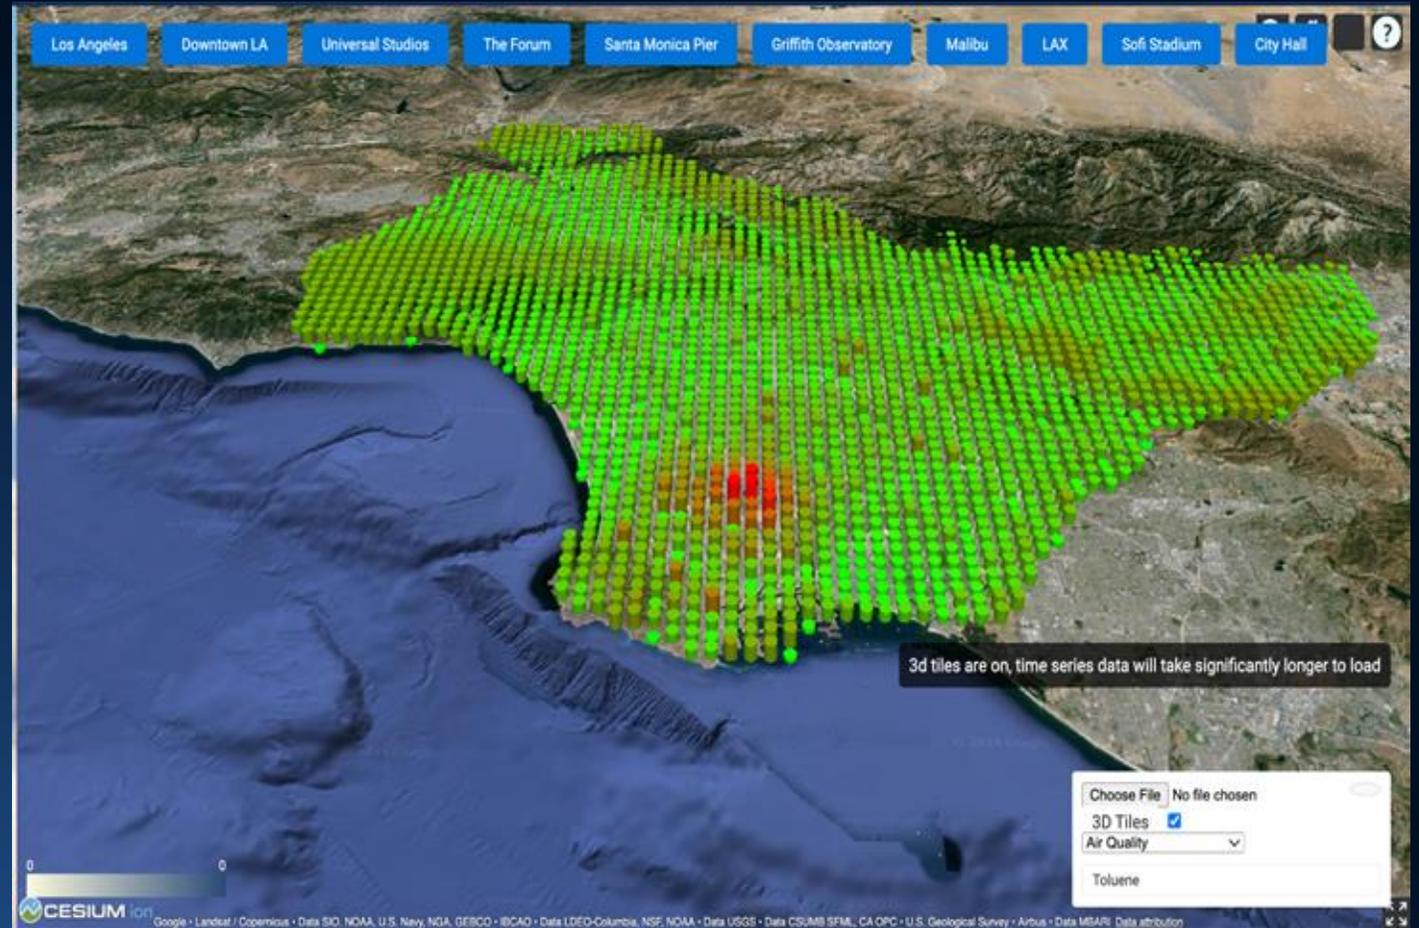

Technology Highlight: Predicting What We Breathe

The City of Los Angeles using NASA data with machine learning (ML) to predict air quality, improving human health outcomes

Objectives:

- Train ML models on measurements of particulate matter, ozone, nitrous oxide and other pollutants
- Integrate ground and space data
- Run on the cloud
- Create a Los Angeles-based predictive model and interventions that can be transferred for use in other cities

Tomorrow io: NASA-developed Technology and Science at Work

- We are creating next-generation satellites and sensors that deliver precise data about our nation's resources, from freshwater supplies to rare Earth minerals
- U.S. weather satellite company Tomorrow.io is leveraging breakthrough miniaturized radar technology -- RainCube -- FIRST developed by NASA

Tomorrow.io satellite equipped with proprietary radar technology that leans on previous NASA development such as RainCube

Advancing Satellite Missions

Earth Science Flight Program

NISAR Launch

July 30, 2025

The NASA-ISRO partnership launched humanity's first-of-its kind dual-band satellite

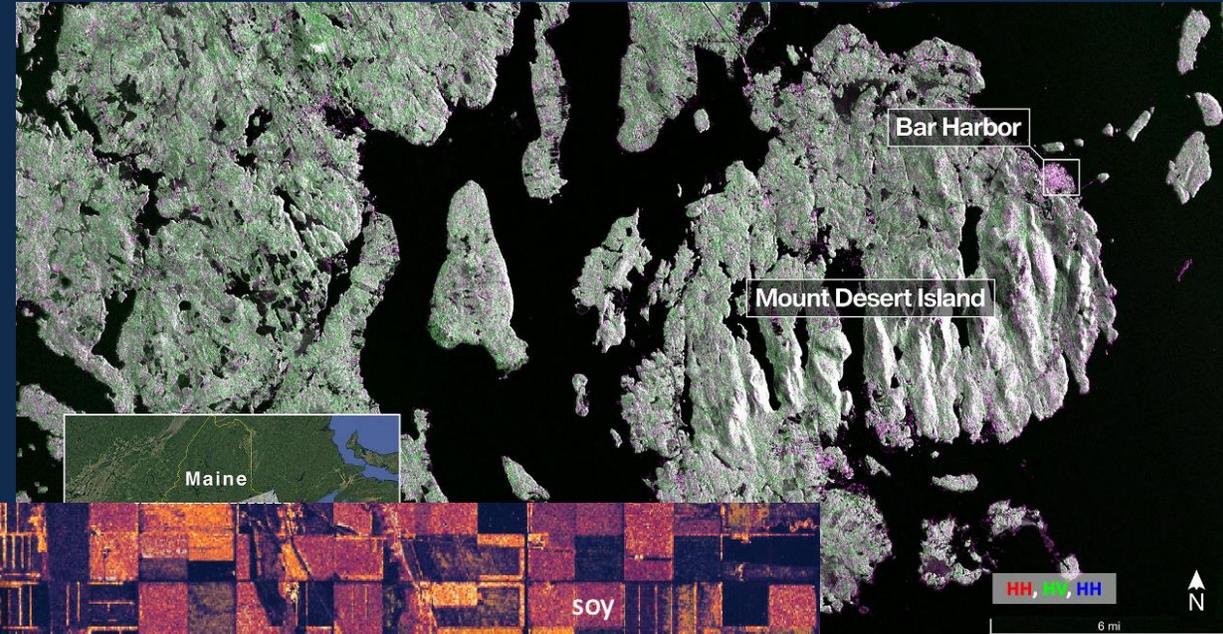

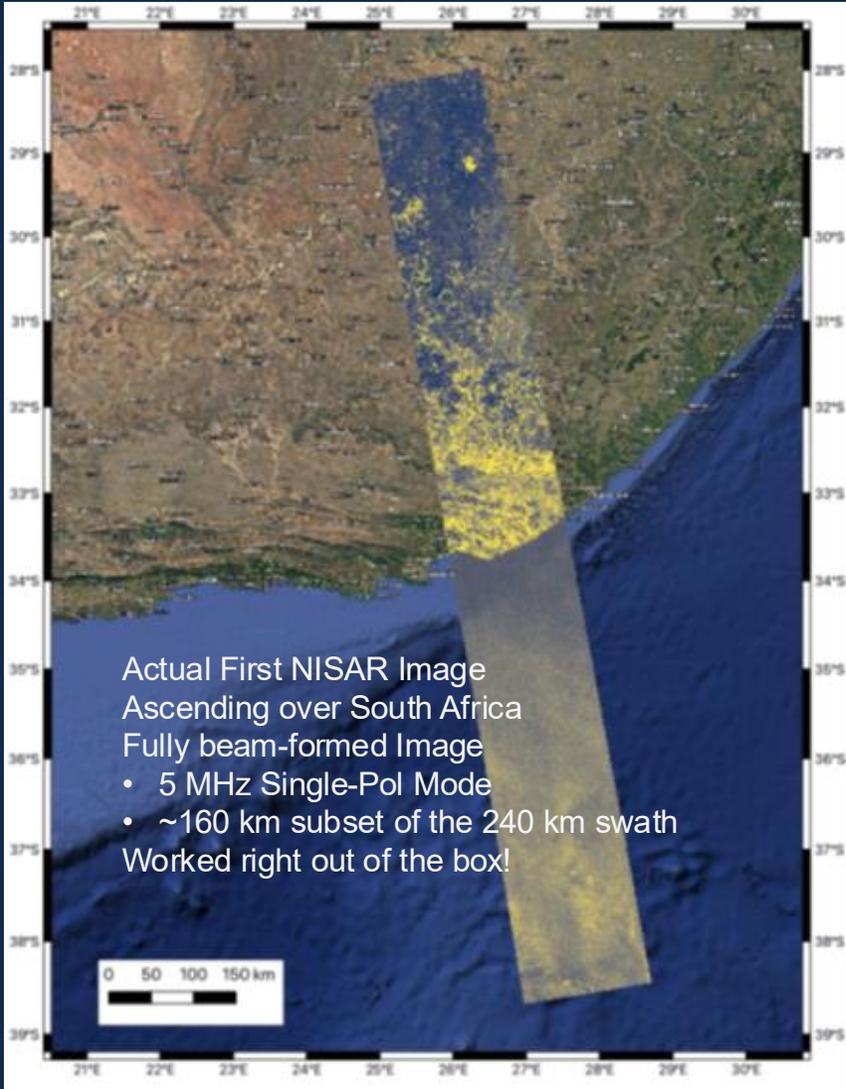

Actional information in:

- Disaster response
- Infrastructure monitoring
- Land-use planning
- Farming
- Water management

The Indian Space Research Organisation's Geosynchronous Satellite Launch Vehicle lifts off from Satish Dhawan Space Centre on India's southeastern coast at 8:10 a.m. EDT (5:40 a.m. IST), July 30, 2025. Credit: ISRO

NISAR's Actionable Science

More than 180 organizations ready to use NISAR science and data

U.S. Sea Level Change

[Sea Level 101](#)

[National Sea Level Explorer](#)

[Resources](#)

[About](#)

Rising Seas, Changing Coasts

This site provides federally supported data visualizations coupled with explanations and science education to help communities prepare for challenges that will affect our coastal environments. By showing how sea levels are changing regionally, the site provides a foundation to inform decision-making related to coastal planning, resource management, and emergency operations.

Advancing Scientific Understanding of Earth

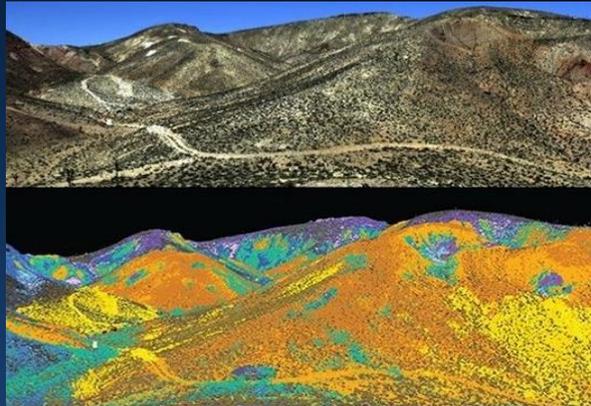

Earth Science Research

Earth Science Research Projects Overview

Earth System Science Research

- Competed discipline and interdisciplinary research
- Early career research
- Field campaign support

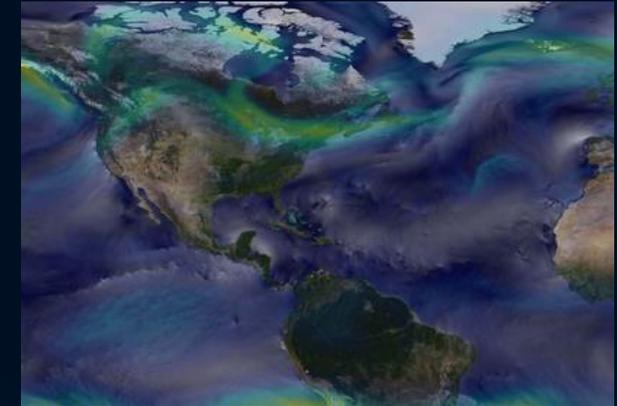

Airborne Science

- High altitude (ER-2, WB-57)
- Large airborne laboratory (B777)
- Remote sensing jets (G-V, UAVSAR, airSAR-ng)

Space Geodesy

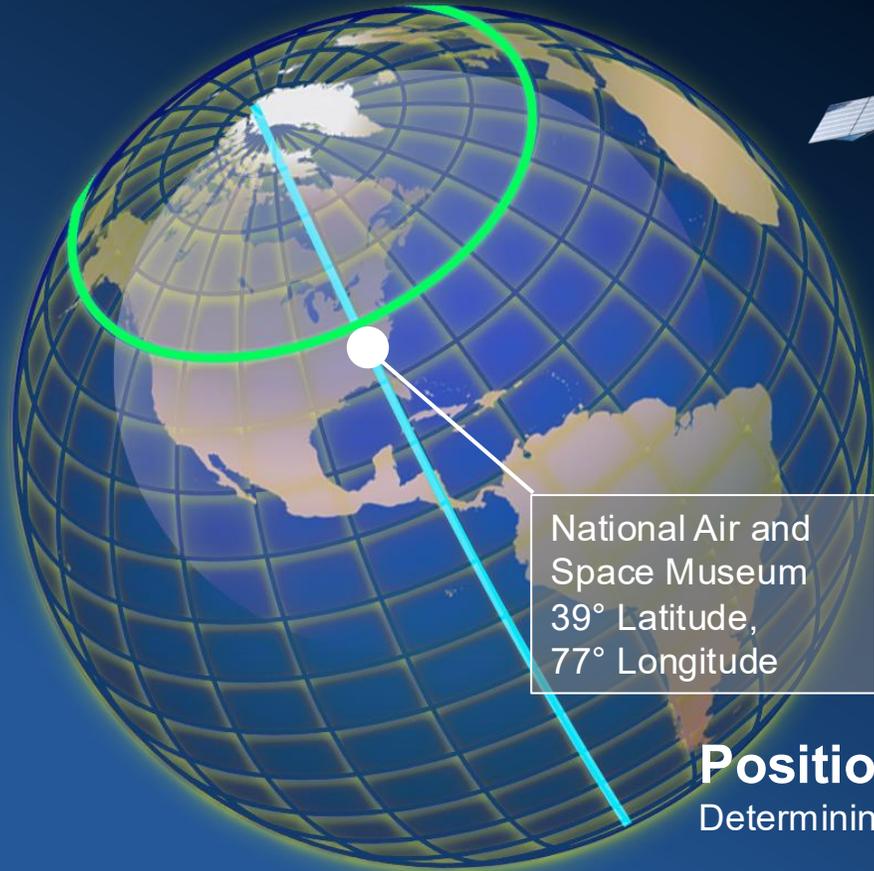

- Very Long Baseline Interferometry (VLBI)
- Satellite Laser Ranging (SLR)
- Global Navigation Satellite System (GNSS)

Integrated Earth System Modeling

- Virtual Modeling Institute (was Model-E, GEOS, ECCO, ISSM, LIS, others)
- Scientific Computing

NASA is the backbone of cutting-edge U.S. positioning, navigation, and timing (PNT) capabilities

National Air and Space Museum
39° Latitude,
77° Longitude

Positioning

Determining location.

Power Grid

Cell Phone

Stock Traders

Timing

Supplying highly accurate time to synchronize complex systems.

Navigation

Finding your way from one place to another.

All three are used together with map data and other information (weather or traffic data, for instance) in modern navigation systems.

- NASA's Geodesy program tracks Earth's constantly changing shape, orientation in space, rotation, and gravity field, enabling precise positioning of assets on the ground and in space
- NASA's Space Geodesy Program is the U.S. backbone for both civilian and national security PNT accuracy

The ESD Airborne Science Program is modernizing and recapitalizing a diverse fleet to support world-class airborne science well into the future

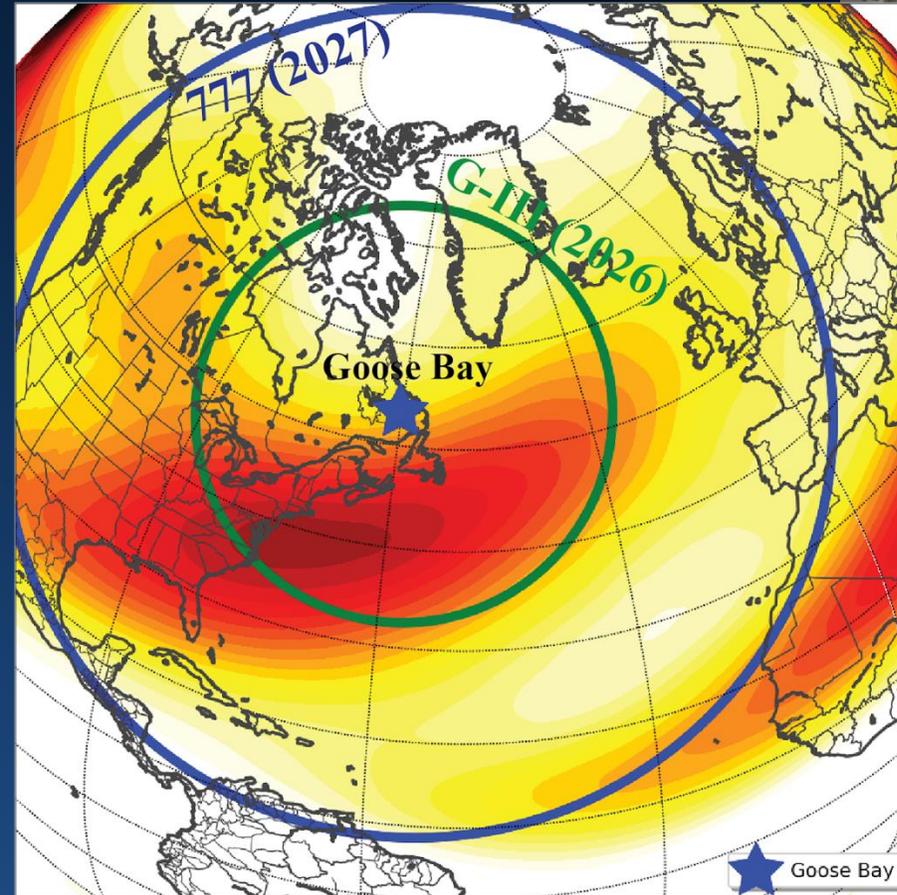

NURTURE: Understanding High-Impact Winter Weather

North American Upstream
Feature-Resolving and
Tropopause Uncertainty
Reconnaissance
Experiment (NUTURE)

26 - February 20, 2026

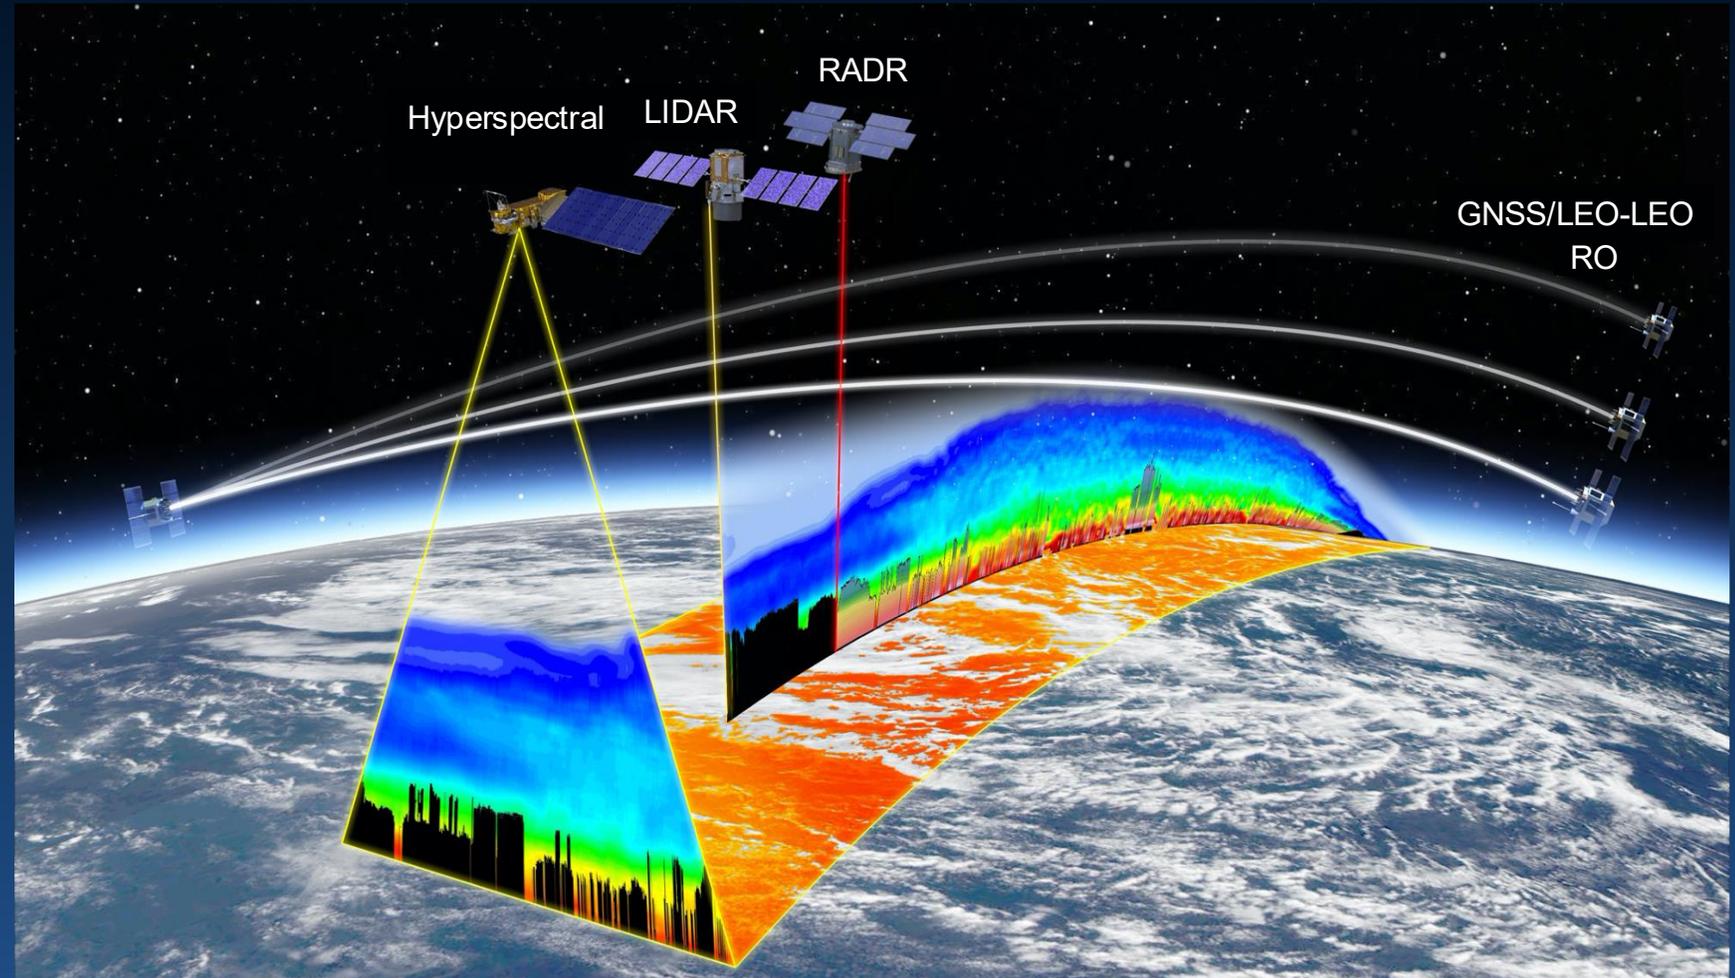

Phase Two:
NASA 777 to fly January -
February 2027

Decadal Survey: Study of the Planetary Boundary Layer to Improve Numerical Weather Prediction

The Planetary Boundary Layer is:

- Where the atmosphere meets the surface
- The most complex part of the atmosphere
- The part of the atmosphere where humans live
- ***The most difficult part of the atmosphere to observe and understand***

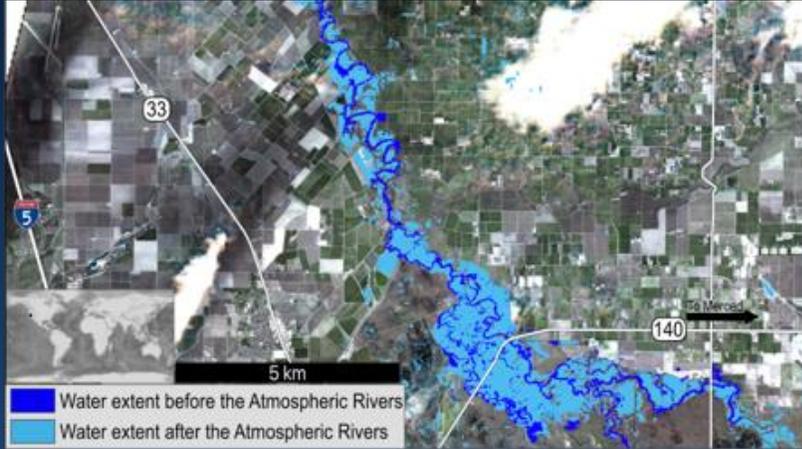

Advancing Use of Actionable Science

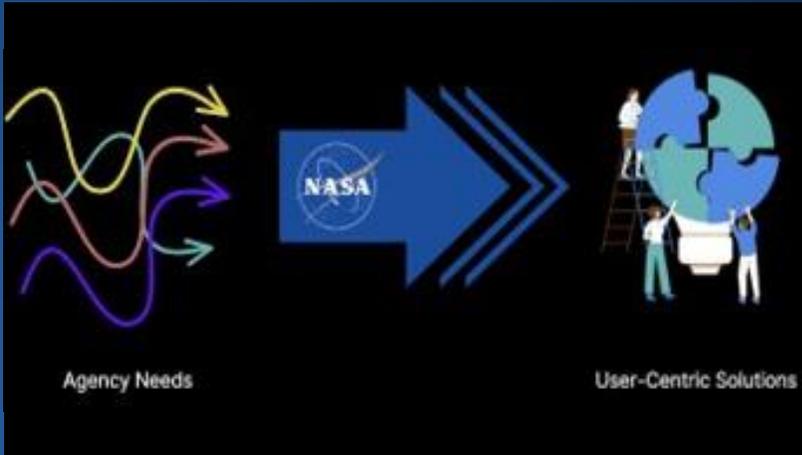

Applied Science and Responsive Science Initiatives

Earth Action Projects Overview, Part I

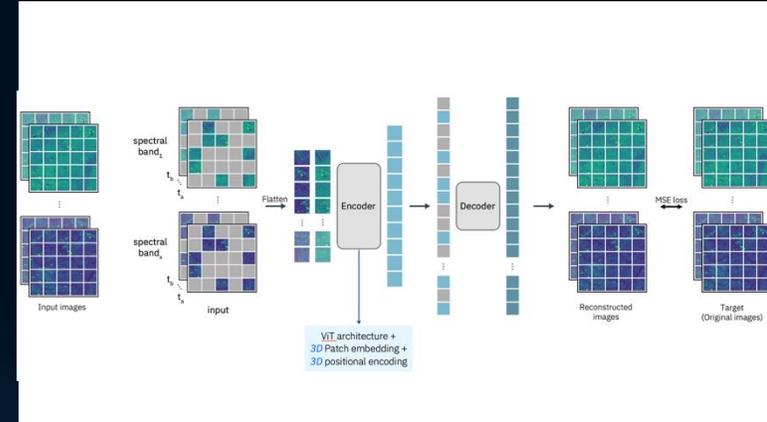

Application Innovation

- Water Resources, Health and Air Quality, Ecological Conservation
- Energy and Infrastructure

Interagency Satellite Observation Needs

- Assesses and fulfills needs identified by federal agencies
- Develops some of NASA's most used data products

AI and Advanced Modeling Applications

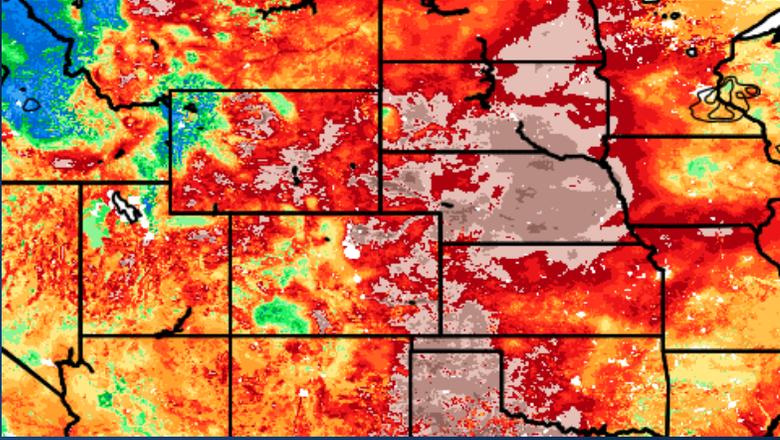

- GeoAI to improve decision-making
- Other advanced modeling

Commercial Satellite Data Acquisition

- Data purchases to support ESD needs
- Sector support through product evals, cal-val, etc.

Earth Action Projects Overview, Part II

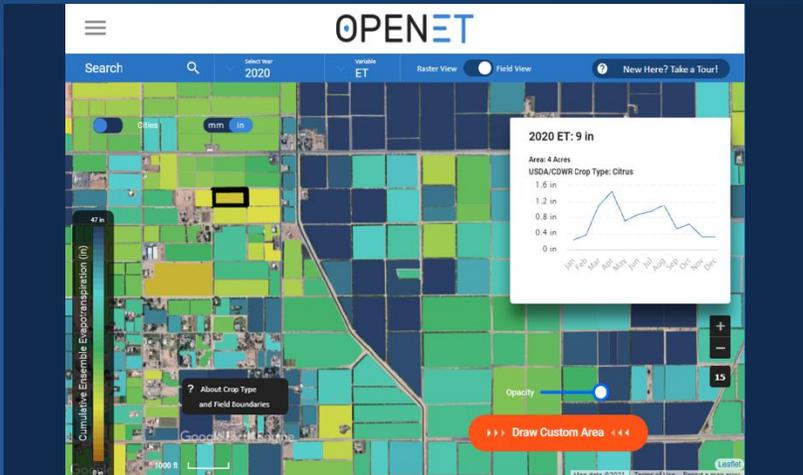

RSI Crosscutting

- ARSET, EarthRISE
- Earth Information Center
- Private Sector Engagement

Wildland Fires

- Competed programs
- Field campaigns
- New technologies

Agriculture

- Large consortia awards
- Domestic productivity
- International food security

Disasters

- Disaster Response
- Competed Disaster program

How can NASA's actionable data power your business?

Decadal Survey is how we continue to shape this question

74%

of U.S. Fortune 100 companies routinely use NASA Earth Science data to support business operations, logistics, and risk management

78%

of U.S.-based users accessing Earth Science Division data in FY2024 were from the commercial sector, demonstrating Earth science information is a critical resource to more than academia*

We provide pre-competitive insights on vital water resources to help large grocers and retailers anticipate long-term impacts on agricultural and supply chain impacts

**NASA review of FY24 database exports show 78% of users use .com domain; 3.7% from .edu, 1.1% from .gov, and 16.1% from other*
