

Lance Bartosz is currently leading the Proposal Engineering team and Advanced Technology initiatives within Collins Aerospace EACS business unit. In this role Lance utilizes his extensive aerospace engineering experience to lead technical teams in the creation of innovative solutions for our customers.

Lance has managed the design, development and certification of many thermal management and engine control systems, including: air cycle machines, jet fuel controls, heat exchangers, valves and many other aircraft components.

Lance is also an Aircraft Cabin Air Quality expert who leads R&D of innovative technologies designed to improve the aircraft environment.

Outside of work Lance enjoys spending time with his family on their boat, cruising the ocean to various places. As a USCG 50 ton licensed captain Lance operates large boats all along the East Coast with Block Island as a favorite destination.
