To that end, we, the online service providers, commit to:

Work together to ensure cross-industry efforts are coordinated and robust, for instance by investing in and expanding the GIFCT, and by sharing knowledge and expertise.

To that end, we, Governments and online service providers, commit to work collectively to:

Support smaller platforms as they build capacity to remove terrorist and violent extremist content, including through sharing technical solutions and relevant databases of hashes or other relevant material, such as the GIFCT shared database.

Hash-Sharing Consortium

In 2016, the founding member companies of GIFCT (Facebook, Microsoft, Twitter, and YouTube), created a shared industry database of “hashes” — unique digital “fingerprints” — of known violent terrorist imagery or terrorist recruitment videos that had been removed from their services.

How does it work?

An image or video is “hashed” in its raw form and is not linked to any original platform or user data. Hashes appear as a numerical representation of the original content and cannot be reverse-engineered to recreate the image and/or video. A platform needs to find a match with a given hash on their platform in order to see what the hash corresponds with.

Members

The Hash-Sharing Consortium currently consists of 13 companies: *Microsoft, Facebook, Twitter, YouTube, Ask.fm, Cloudinary, Instagram, JustPaste.it, LinkedIn, Verizon Media, Reddit, Snap, and Yellow*

No access to non-industry members has been granted. Each consortium member can decide how they would like to use the database based on their own user terms of service, as well as how they operate and how they make use of both technical and human capabilities.

NUMBERS

- **2020 report: 250K visually distinct images and ~50K visually distinct videos (up from 200K overall in 2019)**

BENEFITS

- Cross-platform threats → →
→ → Cross-platform responses
- Faster, more comprehensive response
- Technology sharing (esp. with smaller platforms)
- (?) Extra-legal take-downs (based on platforms' terms of service) are global

ONE DATABASE

No

Opinion

The New York Times

YouTube Is Erasing History

Under pressure to remove "extremist content," platforms are purging vital human rights evidence.

By Hadi Al Khatib and Dia Kayyali
Mr. Al Khatib is a human rights activist. Dia Kayyali is a program manager at WITNESS.

Caught in the Net: The Impact of
"Extremist" Speech Regulations on Human
Rights Content

BY JILLIAN C. YORK | MAY 30, 2019

CONCERNS

- **Lack of transparency—what is in the database??**
- **Power imbalances (both industry and gvt)**
- **Disparate impact of definition of “terrorist” and unclear definition of “glorification” (72% of the database)**
- **Overreliance on technical filters**
- **No remedial mechanisms**
- **Extra-legal take-downs (based on platforms’ terms of service) are global!**

**IMPORTANCE GOES
BEYOND “TERRORIST”
CONTENT**

THE RISE OF CONTENT CARTELS ???

“CIB”/Influence operations

Terrorist Content

The Pilot

Frequency illusion or Baader–Meinhof phenomenon	<p>The frequency illusion is that once something has been noticed then every instance of that thing is noticed, leading to the belief it has a high frequency of occurrence (a form of selection bias).^[53] The Baader–Meinhof phenomenon is the illusion where something that has recently come to one's attention suddenly seems to appear with improbable frequency shortly afterwards.^[54] The Baader–Meinhof phenomenon is sometimes conflated with frequency illusion and the recency illusion.^[55] It was named after an incidence of frequency illusion in which the Baader–Meinhof Group was mentioned.^[56]</p>

protocol Facebook CTO Mike Schroepfer on Trump, trolls and surviving the COVID-19 crisis

"We have a lot of work to do to get this exactly right."

By Issie Lapowsky | June 24, 2020

You recently announced SimSearchNet, an AI tool that is able to detect images nearly identical, but not exact, so Facebook can do a better job removing violent content. . . .

Facebook isn't the only company dealing with this problem. Is there any other company sourcing SimSearchNet to other tech companies, similar to how you've worked on terrorist content through the Global Internet Forum to Counter Terrorism?

SimSearch builds on top of a lot of technology we've built and open-sourced with our research team. Our priority for that particular project was to get it into production as quickly as possible. As with everything, if we find things that we think are of utility, we'll open-source them, including the models and whatnot whenever we can.

To connect with the community, we've been meeting regularly with the Office of the Inspector General of Homeland Security, the F.B.I. and the Department of National Intelligence. They were also trading intelligence and discussing threats over encrypted chat messages with one another.

116TH CONGRESS
1ST SESSION

A BILL

To require transparency, accountability, and protections for consumers online.

1 Be it enacted by the Senate and House of Representatives
2 of the United States of America in Congress assembled,
3 SECTION 1. SHORT TITLE.

4 This Act may be cited as the "Platform Accountability
5 and Consumer Transparency Act" or the "PACT
6 Act".

(i) NIST VOLUNTARY FRAMEWORK.—

(2) CONTENTS.—The framework developed under paragraph (1) shall include—

(A) technical standards and processes for the sharing of information among providers of an interactive computer service;

(B) recommendations on automated detection tools and the appropriate nature and level of human review to correct for machine error in assessing nuanced or context-specific issues;

ment on COVID-19 from Microsoft, LinkedIn, Reddit, Twitter and YouTube:

work closely together on these efforts. We're helping people stay connected and combating fraud and the virus, elevating our platforms, and working in coordination with agencies around the world to protect our companies and our users.

Twitter and YouTube

Information on Twitter

CONCURRENT TRENDS

①

**Informal
pressure**

②

**Regulation that
makes GIFCT
effectively
mandatory
(e.g. EU
TERREG)**

③

**Internet
Referral Units
(IRUs)**

NEED TO BUILD IN:

- **Transparency**
- **Oversight**
- **Remedial mechanisms for mistakes**
- **Guardrails on “creep”**

THANK YOU
