

**CNSTAT Public Webinar Series:**  
**International Approaches to Conducting a Census in the 21<sup>st</sup> Century:**  
**Australia Bureau of Statistics**  
**May 31, 2023**  
**Presenter Biosketches**

**Dr. Anders Holmberg** is the chief methodologist/general manager of the Methodology & Data Science Division at the Australian Bureau of Statistics. He has a Ph.D. in statistics about model assisted survey planning, and a background working with various types of data sources for official statistics in many different countries including Sweden, Cambodia, New Zealand and Norway. He has been a member of Eurostat's directors of methodology group and is still a member of the methodology advisory boards of Statistics Netherlands and Statistics Sweden. As a practitioner he has worked with the design and collection of sample survey data, the use of administrative data about people, businesses, and real estate for Statistics, in population censuses and for research purposes. As one of the statisticians he also took part building Statistics Sweden's data laboratory for research and data integration MONA, (Microdata ONline Access).

**Ross Watmuff** is the director of the Census Admin Data Ventures team at the Australian Bureau of Statistics (ABS). His team leads research and use of administrative data to support the ABS's Census, most recently conducted in August 2021. Ross began his career at the ABS 20 years ago as a statistical methodologist, mostly in the area of household and population statistics. He has worked with a range of international partners on how traditional Census taking can be transformed in the future through greater use of administrative data.
