

Delivering Affordable Cancer Care in the 21st Century

AGENDA

The Keck Center of the National Academies
500 Fifth Street, NW - Room 100
Washington, DC 20001

Workshop Aims

In 2009, the National Cancer Policy Forum convened *Assessing and Improving Value in Cancer Care: A Workshop* (http://www.nap.edu/catalog.php?record_id=12644) that examined the implications of value considerations in cancer care. This workshop, *Delivering Affordable Cancer Care in the 21st Century*, is intended to build upon the 2009 workshop discussions and further examine the challenges of delivering affordable cancer care throughout the continuum of screening, diagnosis, treatment, and surveillance. Workshop presentations and discussions will highlight the causes of the rising costs of cancer care and suggest potential ways to curb these costs, with the goal of ensuring that patients have access to high quality, affordable cancer care.

The goals of the workshop include:

- Summarize current evidence on the overuse, underuse, and misuse of medical technology throughout the continuum of cancer care;
- Identify problems in the system that could be modified, and suggest changes to address them; and
- Discuss policy issues related to the value, cost containment, and reimbursement of cancer care as well as the economic incentives of innovation and technology diffusion in cancer.
