Challenges and Opportunities in the Standardized Collection of Functioning Information for Research in Rehabilitation and Healthy Longevity

Prof. Dr. Birgit Prodinger

birgit.prodinge@med.uni-augsburg.de

I have no conflict of interest to declare.

Functioning information

... is important at all levels of the health system.

Level		Examples
Macro	Policies and programs	Planning, implementation and evaluation of public health programs
Meso	Service provision and payment	Reimbursement Quality management at service and national level
Micro	Persons and health care professionals	Clinical quality management Clinical outcome measurement Goal setting and monitoring

Functioning information

... is available through different data sources.

Level		Data sources
Macro	Policies and programs	Population studies
Meso	Service provision and payment	Cohort studies Administrative data
Micro	Persons and health care professionals	Clinical studies Clinical data ...

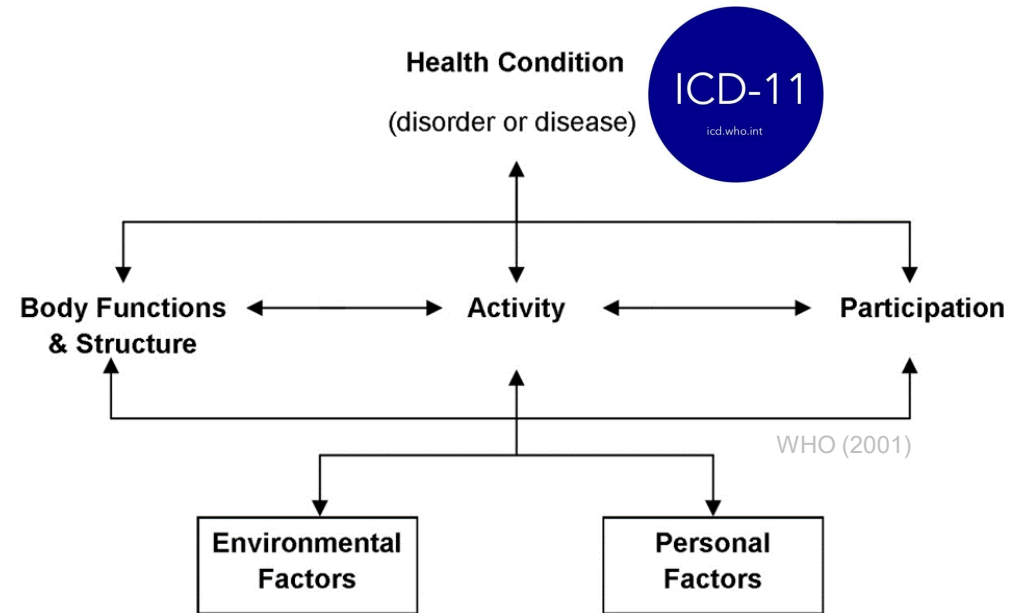

Functioning information

... is collected with various data collection tools.

Level		Methods for data collection
Macro	Policies and programs	Population surveys Registries
Meso	Service provision and payment	Health records Patient-reported outcome measures (PROMs)
Micro	Persons and health care professionals	Clinician-administered assessments Clinical tests ...

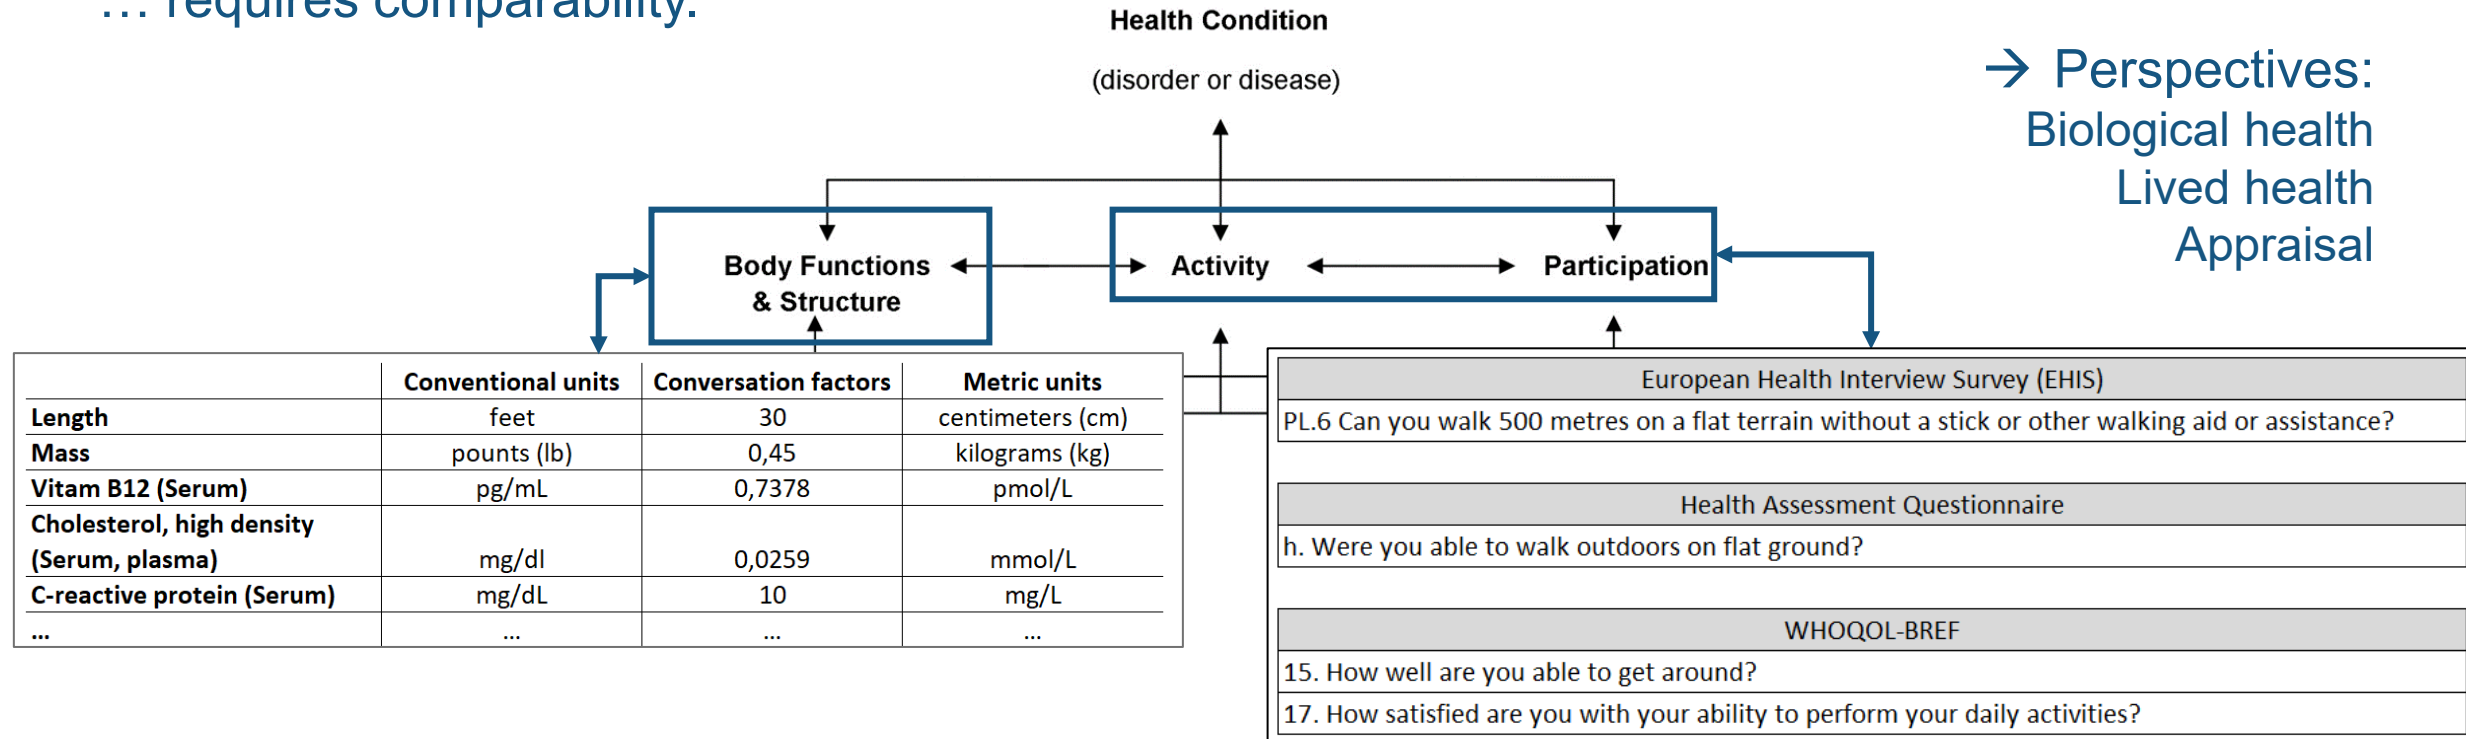

Functioning information

... requires comparability.

Functioning information

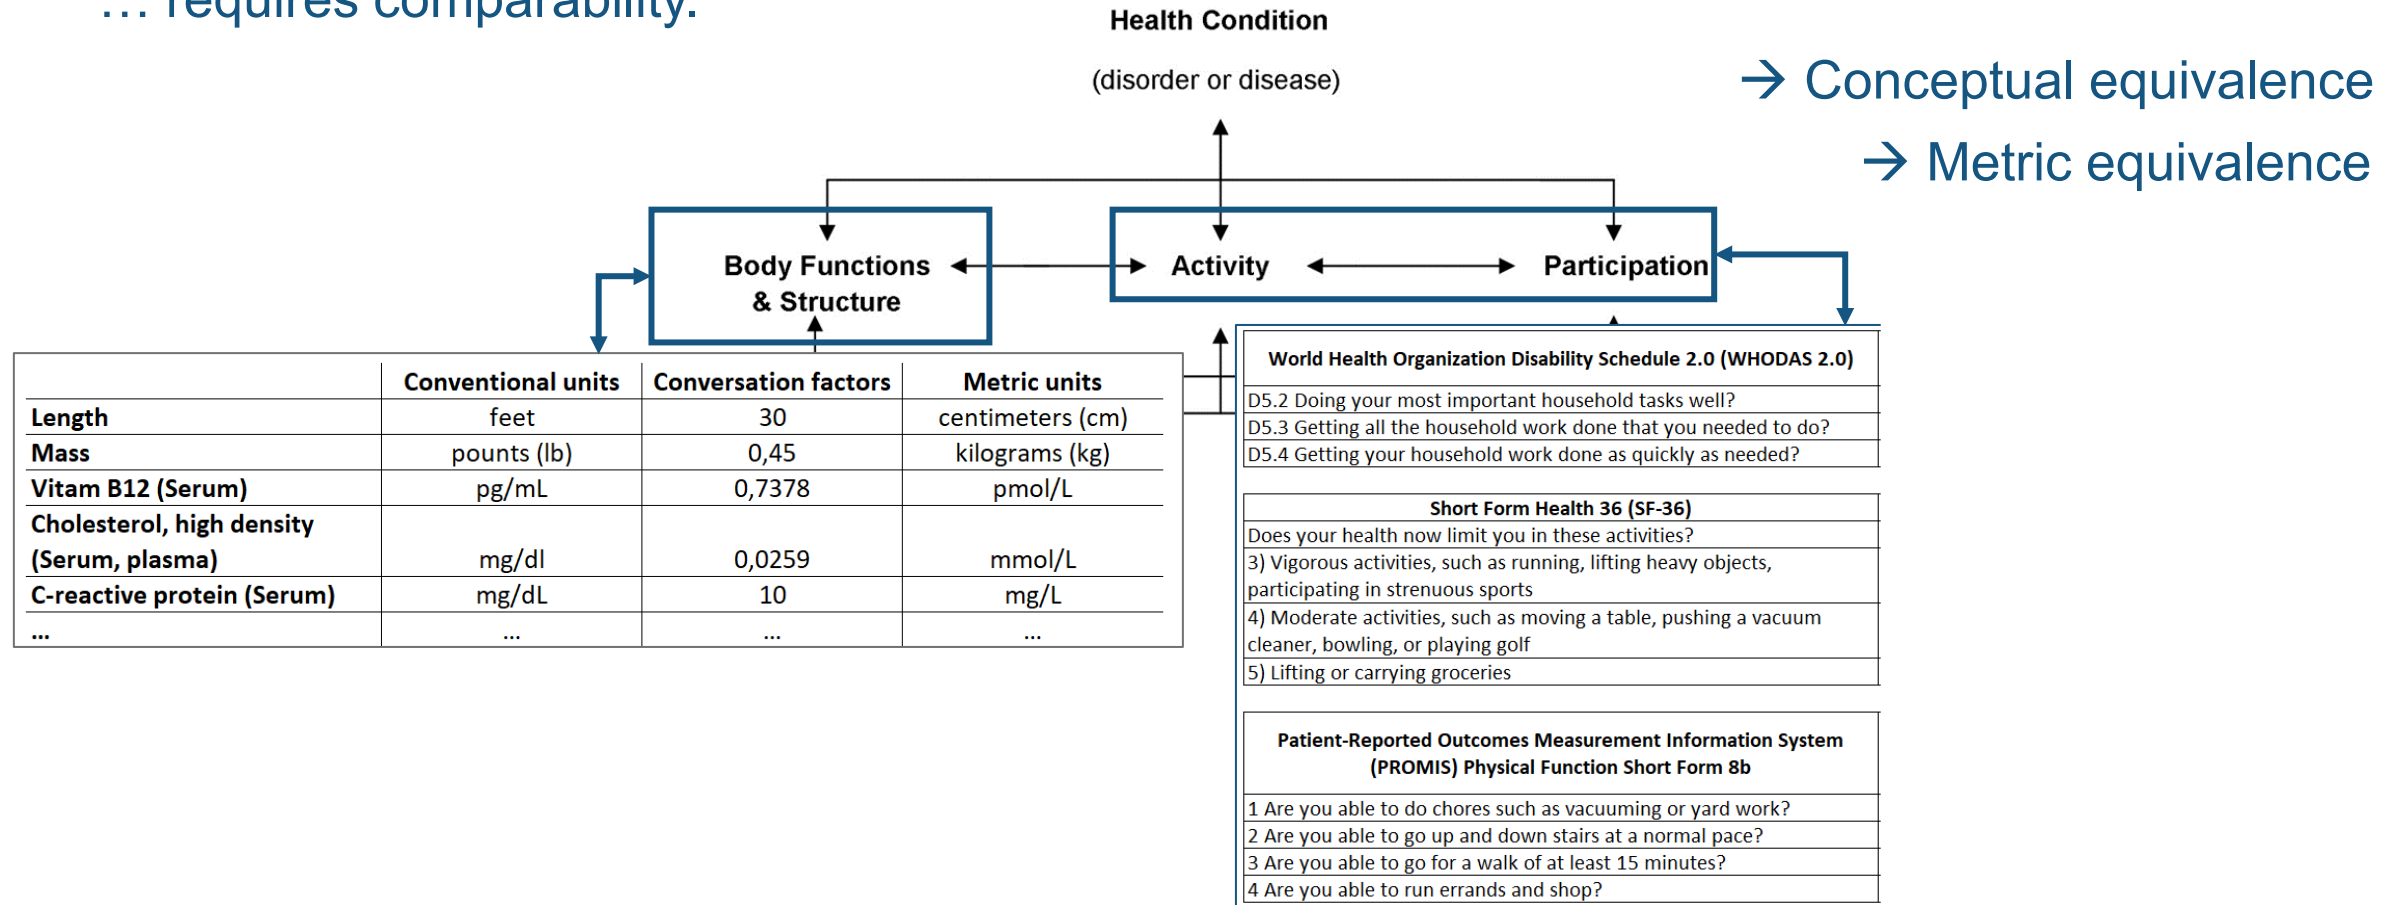

... requires comparability.

→ Perspectives:
Biological health
Lived health
Appraisal

Functioning information

... requires comparability.

Functioning information

... standardizing data collection

- ⊕ Assessments and reporting are unified
- ⊖ Requires change in practice
- ⊖ Loss of comparability of data over time

... standardizing reporting

- ⊕ Allows to continue existing data collection tools
- ⊕ Enables comparability of data over time
- ⊖ Requires transformation

Functioning information

... standardizing data collection

... standardizing reporting

Concept equivalence: *ICF Linking Rules*

Cieza et al. (2019)

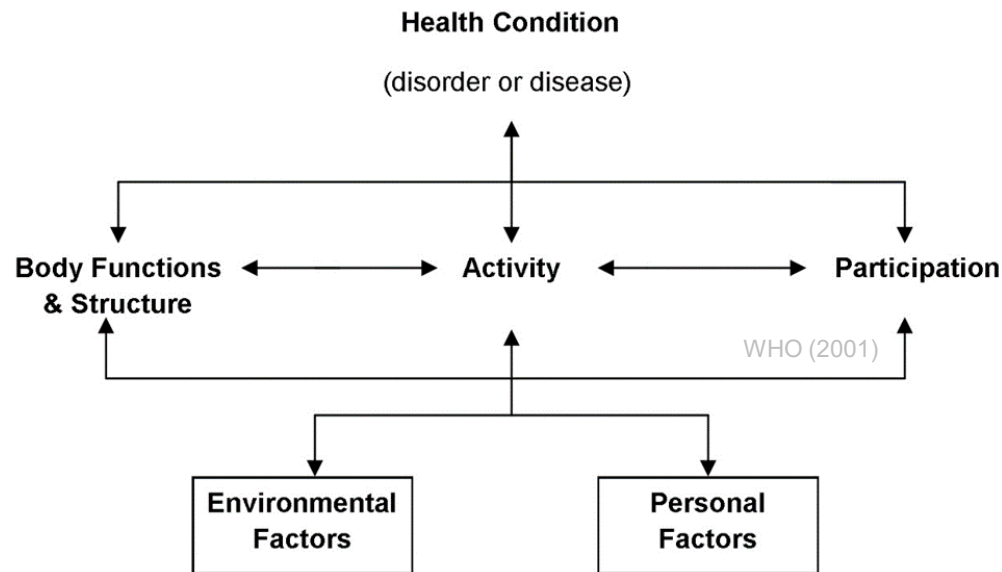

Metric equivalence:

Instrument equating using Rasch measurement model

Andrich (2013)

Functioning

... is multidimensional.

Extent ICF categories in the ICF sets were covered by the Clinical Assessment Tools with and without the additional ICF categories identified in the Patient interviews:

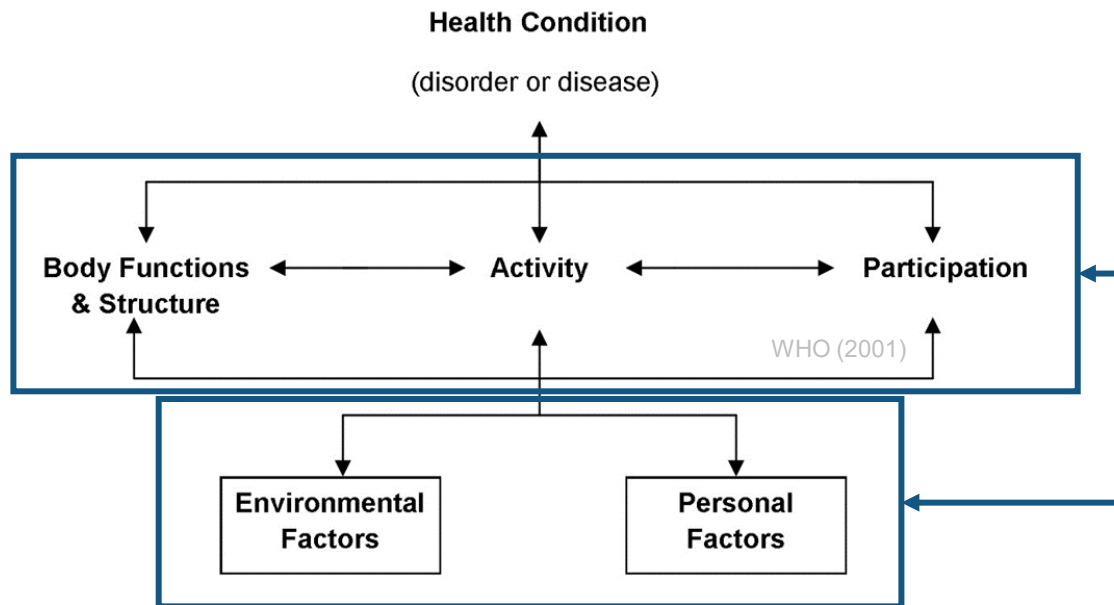

Phase of care	ICF components	ICF sets vs. CATs			ICF sets vs. CATs + PI		
		CATs (n)	ICF sets (n)	Coverage (%)	CATs and PI (n)	ICF sets (n)	Coverage (%)
Acute	B	2	9	22.2	6	9	66.7
	D	0	21	0	7	21	33.3
	E	0	12	0	8	12	66.7
	Total	2	42	4.8	21	42	50.0
Post-acute	B	9	13	69.2	11	13	84.6
	D	10	23	43.5	21	23	91.3
	E	5	13	38.5	10	13	76.9
	Total	24	49	49.0	42	49	85.7
Early long-term	B	8	12	66.7	10	12	83.3
	D	9	22	40.9	16	22	72.7
	E	5	13	38.5	10	13	76.9
	Total	22	47	46.8	36	47	76.6
Late long-term	B	5	15	33.3	12	15	80.0
	D	1	24	4.2	10	24	41.7
	E	0	14	0	10	14	71.4
	Total	6	53	11.3	32	53	60.4

CATs clinical assessment tools, PIs Patient interviews, B body functions, D activities and participations, E environment factors.

Pongpipatpaiboon et al. (2020; pg. 8)

Functioning

... is interactive.

Lived health is an outcome of the interaction between a person's capacity and the environment.

→ Role of contextual factors in dis-/en- ablement process

Functioning

... is continuous.

Hodel et al. (2021; pg. 9)

→ Interpretability:
e.g. minimal clinically important difference (MCID)

In Conclusion: *Challenges and Opportunities*

Functioning information ...

... is important at all levels of the health system.

Functioning ...

... is multidimensional.

... is interactive.

... is continuous.

Functioning, as the main outcome of rehabilitation, uniquely positions rehabilitation as a health strategy at the intersection of various disciplines and fields of practice.
The related information needs to reflect and enable living up to this claim.
