

# A Learning Health System to Transform Care and Health Equity

**Catherine M. Alfano, PhD**

Vice President, Cancer Care Management & Research,  
Northwell Health Cancer Institute

Associate Director, Institute of Health Systems Science,  
Feinstein Institutes for Medical Research

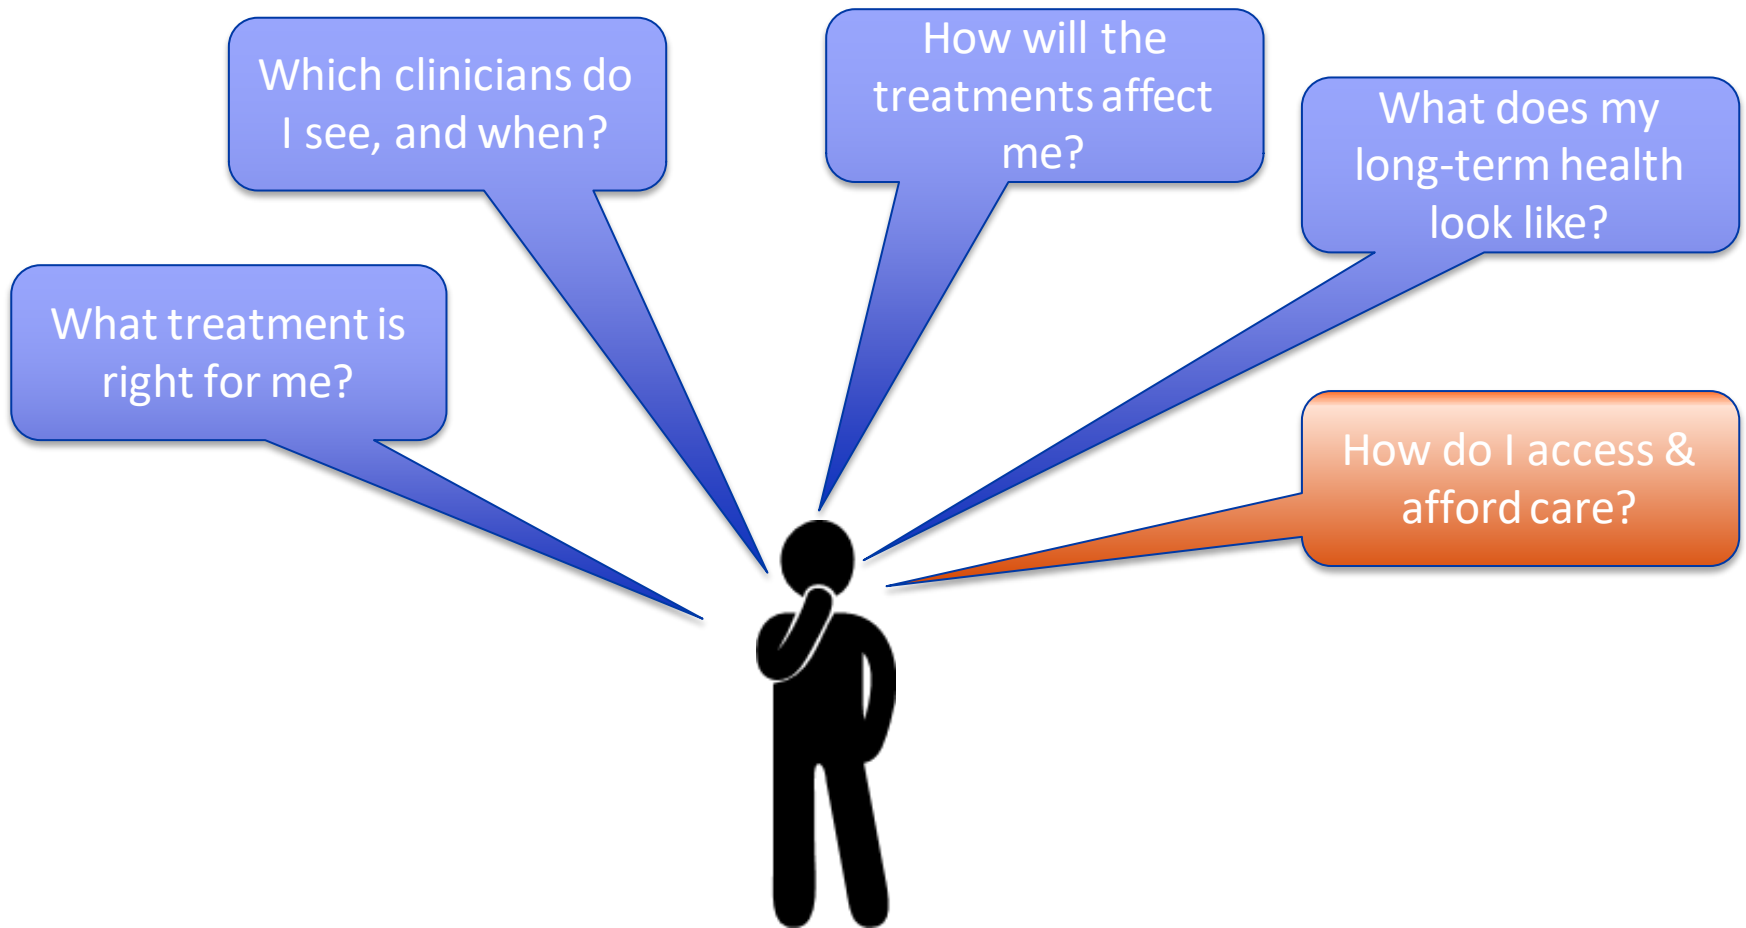

Professor, Dept of Medicine,  
Donald and Barbara Zucker School of Medicine at Hofstra/Northwell

Member of the Katz Institute for Women's Health

October 5, 2023

“Nike knows how to use your data to sell you the right pair of shoes better than healthcare knows how to use your data to personalize your care”

# A Cancer Diagnosis brings MANY Questions

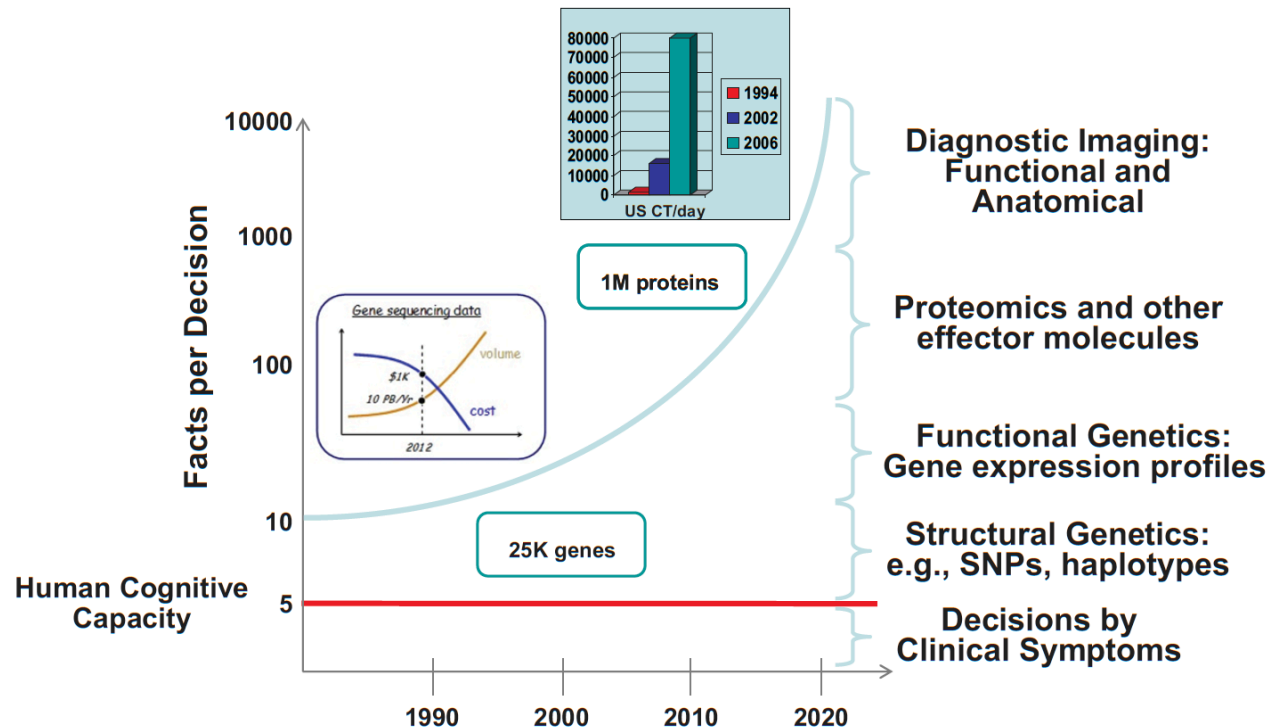

# Answers are Complicated by Heterogeneity in Response to Treatment

- Cancer Therapeutics
- Toxicities
- Psychosocial Response to Cancer
- Impact of Cancer on Patient Function
- Follow-up Care Needs
- Social Determinants of Health

# The Quest for Personalized Care Created a Data Explosion = Cognitive Overload & SLOWER Clinical Decisions

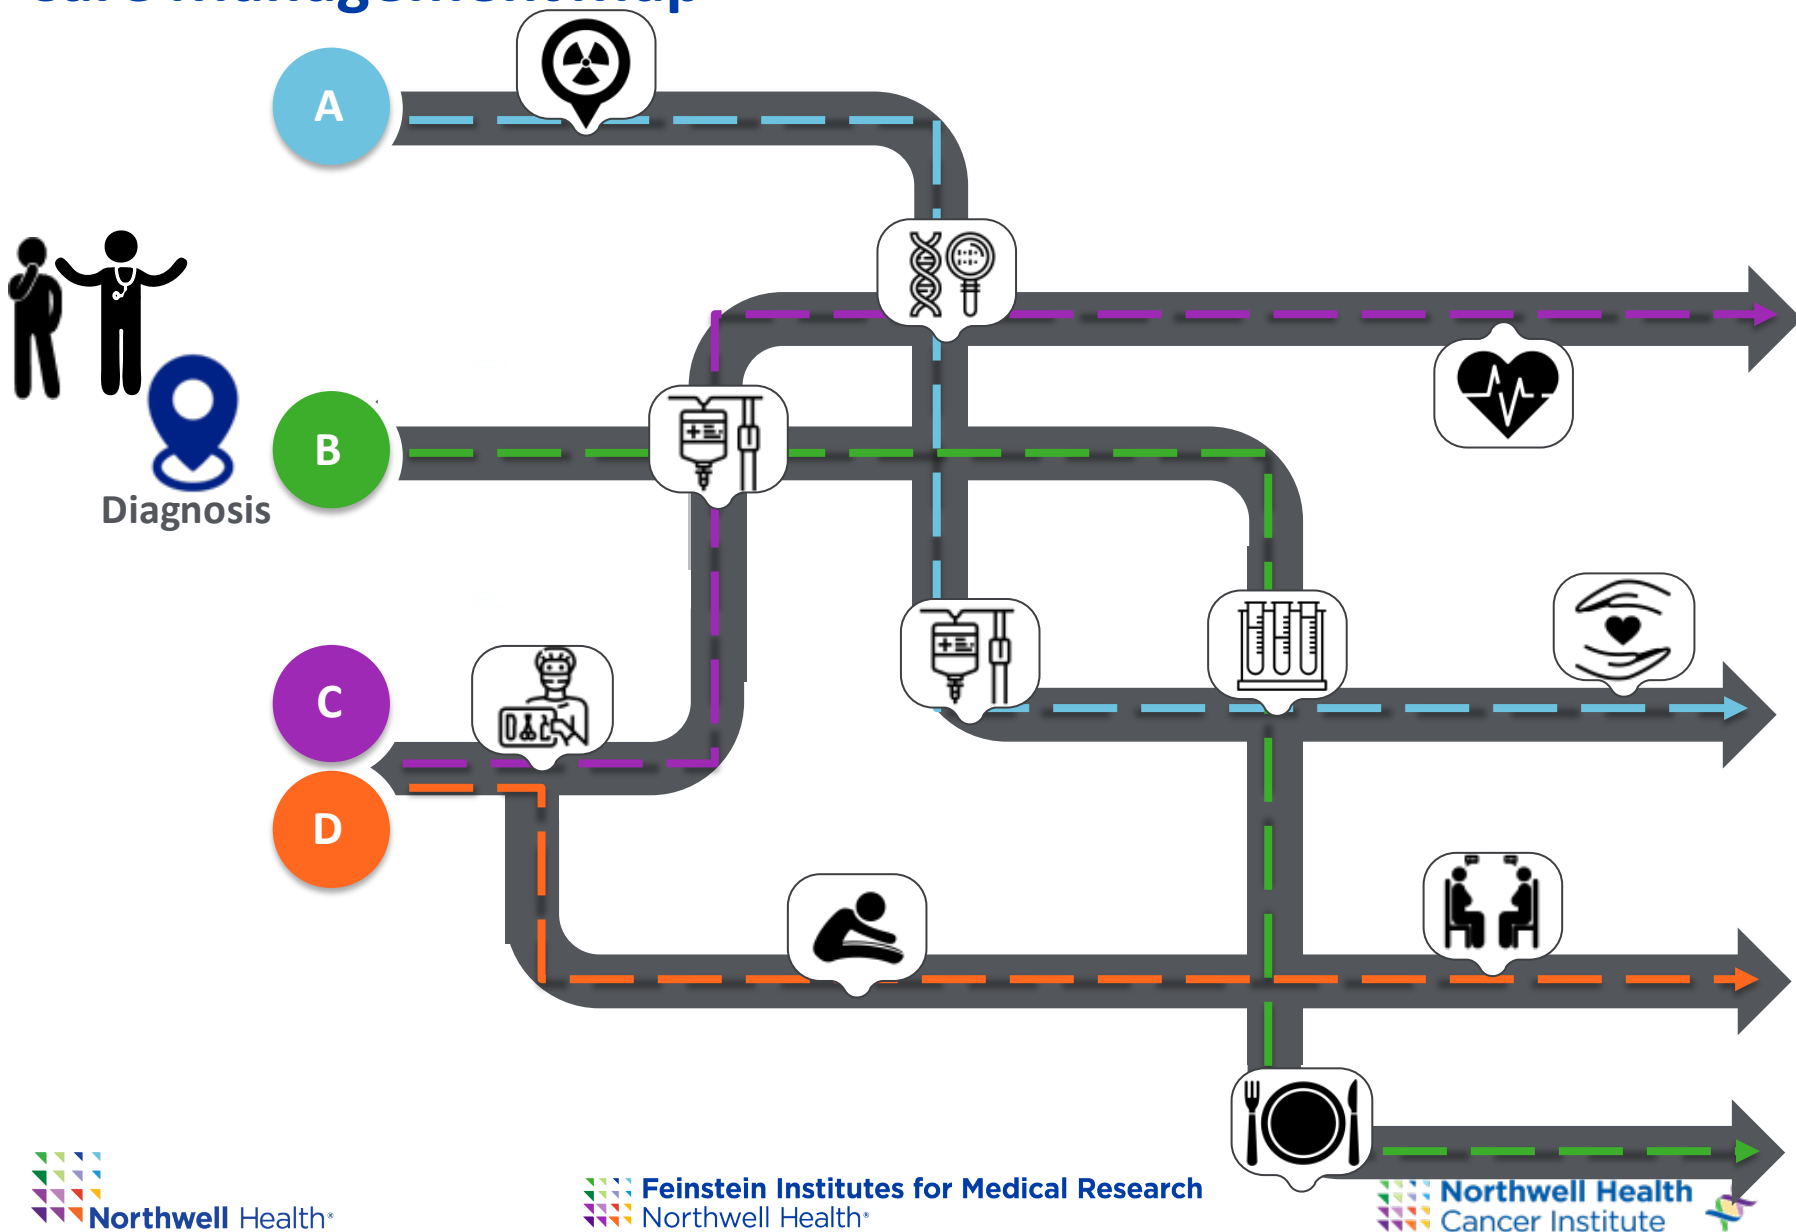

IOM 2010

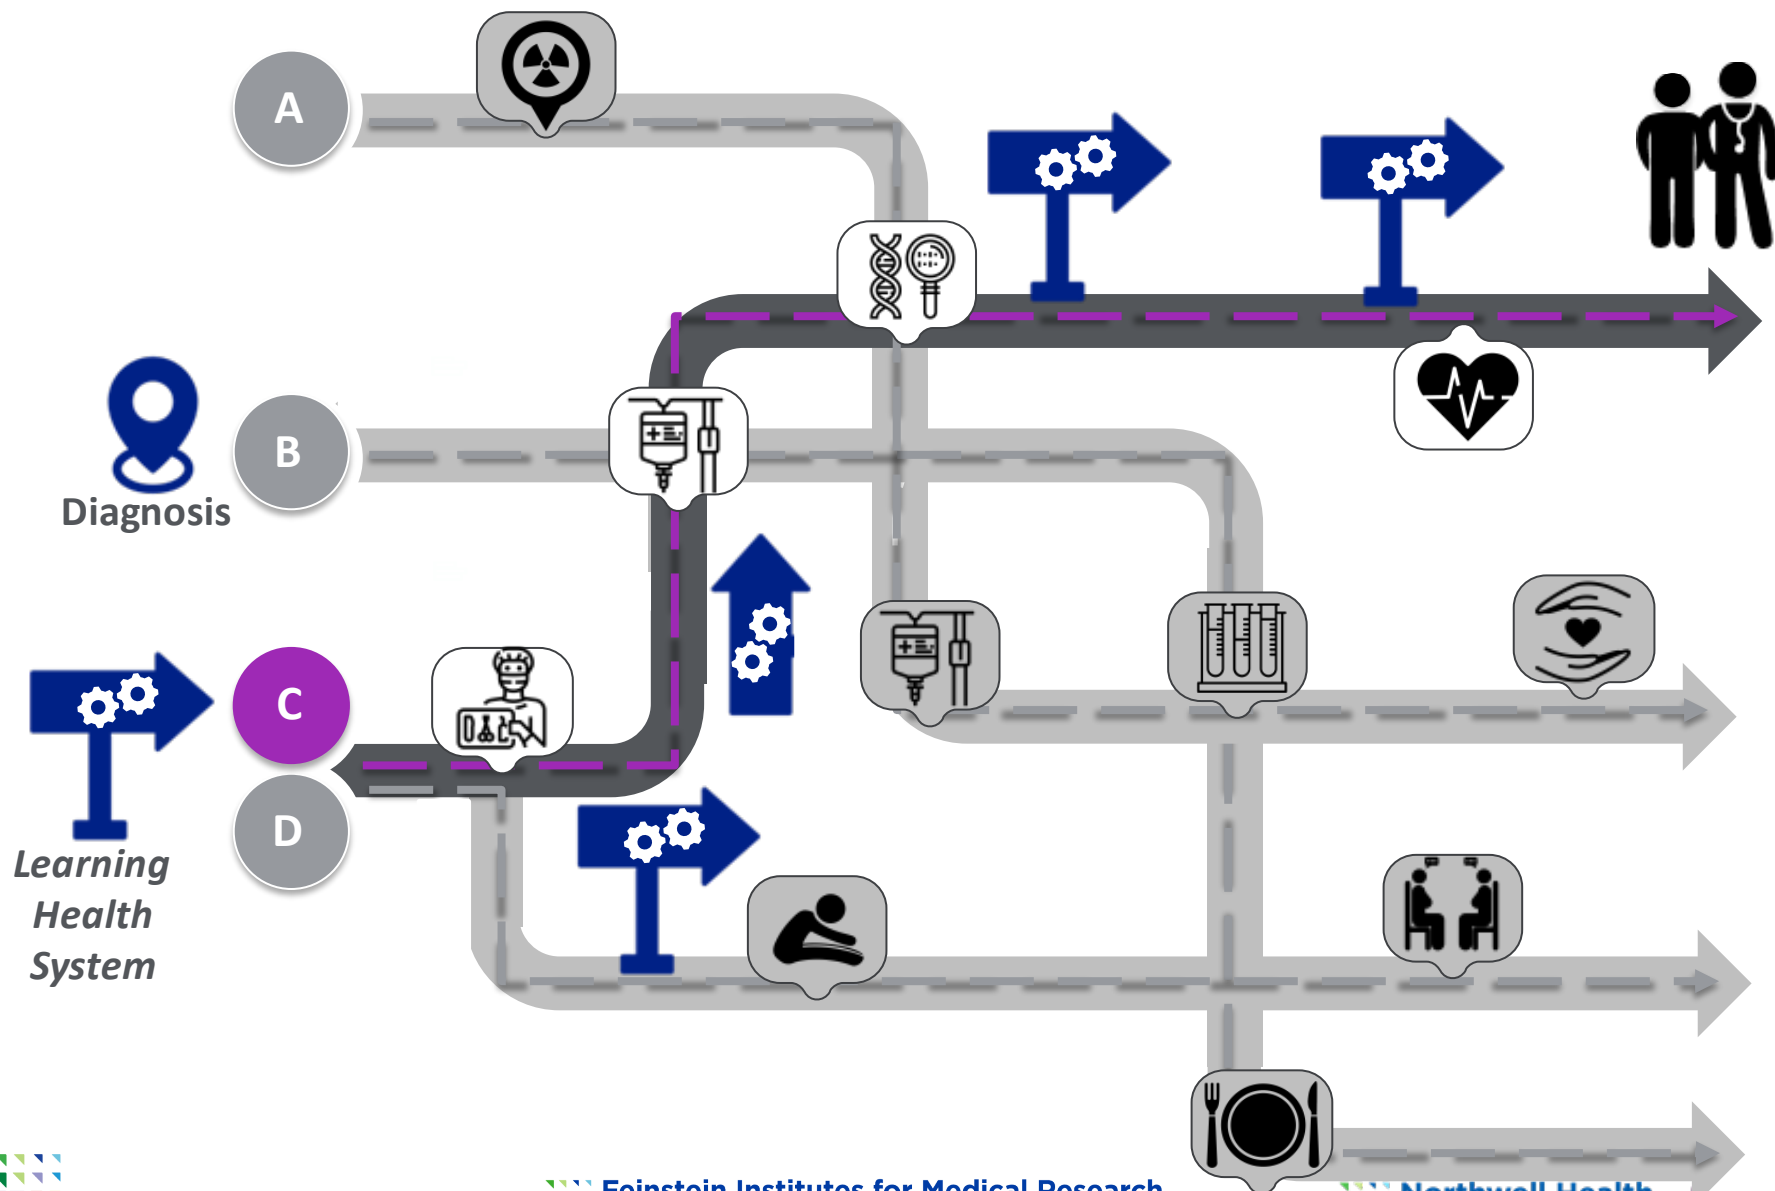

**FIGURE 3-2** Challenges to delivery of individualized clinical care are data explosion and cognitive overload, exceeding human cognitive capacity.

SOURCE: Neti, 2009. Adapted from Stead, 2007, p. 19.

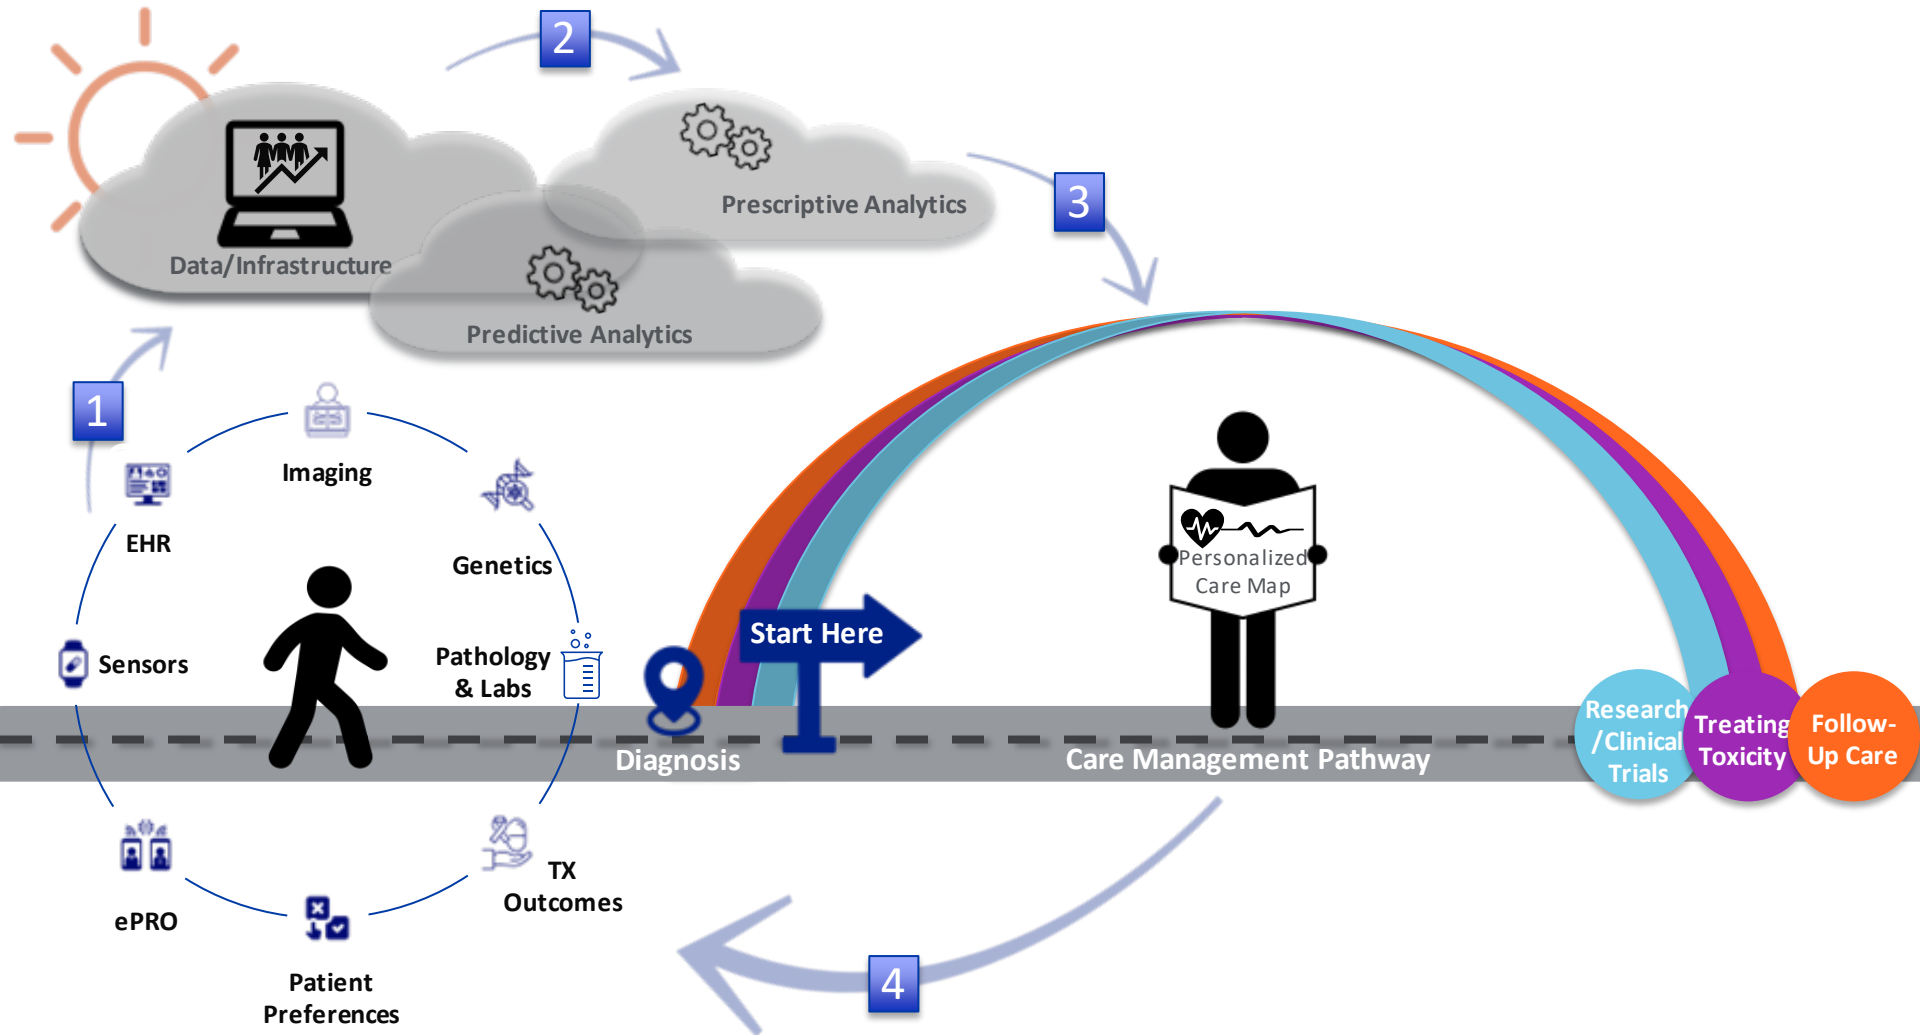

# The Current State of Cancer Care Cannot Specify a Long-term Care Management Map

# New Standard of Personalized Cancer Care

# The Learning Health System enables a seamless pathway of personalized care

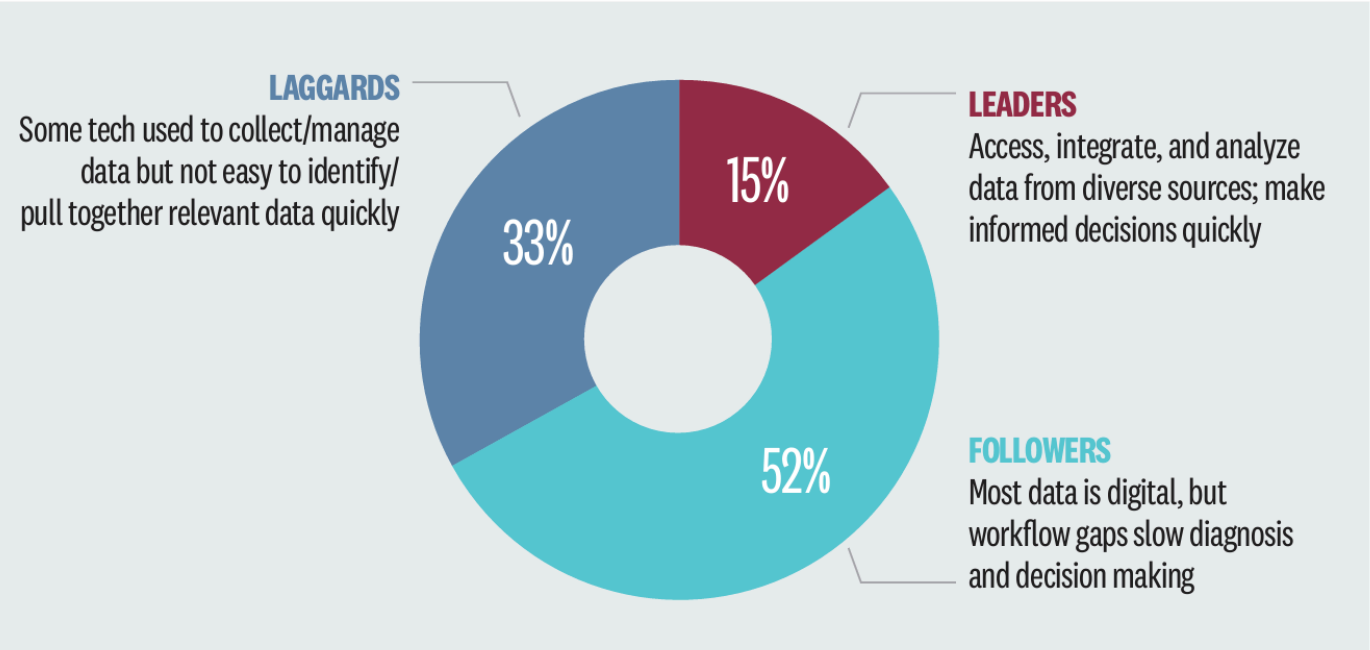

# Most Healthcare Systems Want to Develop Learning Health Systems but are Struggling

FIGURE 1

## ONLY 15% OF ORGANIZATIONS ARE FULLY EQUIPPED TO MAKE QUICK DATA-DRIVEN DECISIONS

Most are building their capabilities, while a third lag behind

SOURCE: HARVARD BUSINESS REVIEW ANALYTIC SERVICES SURVEY, APRIL 2019

Global survey of 742 health care leaders

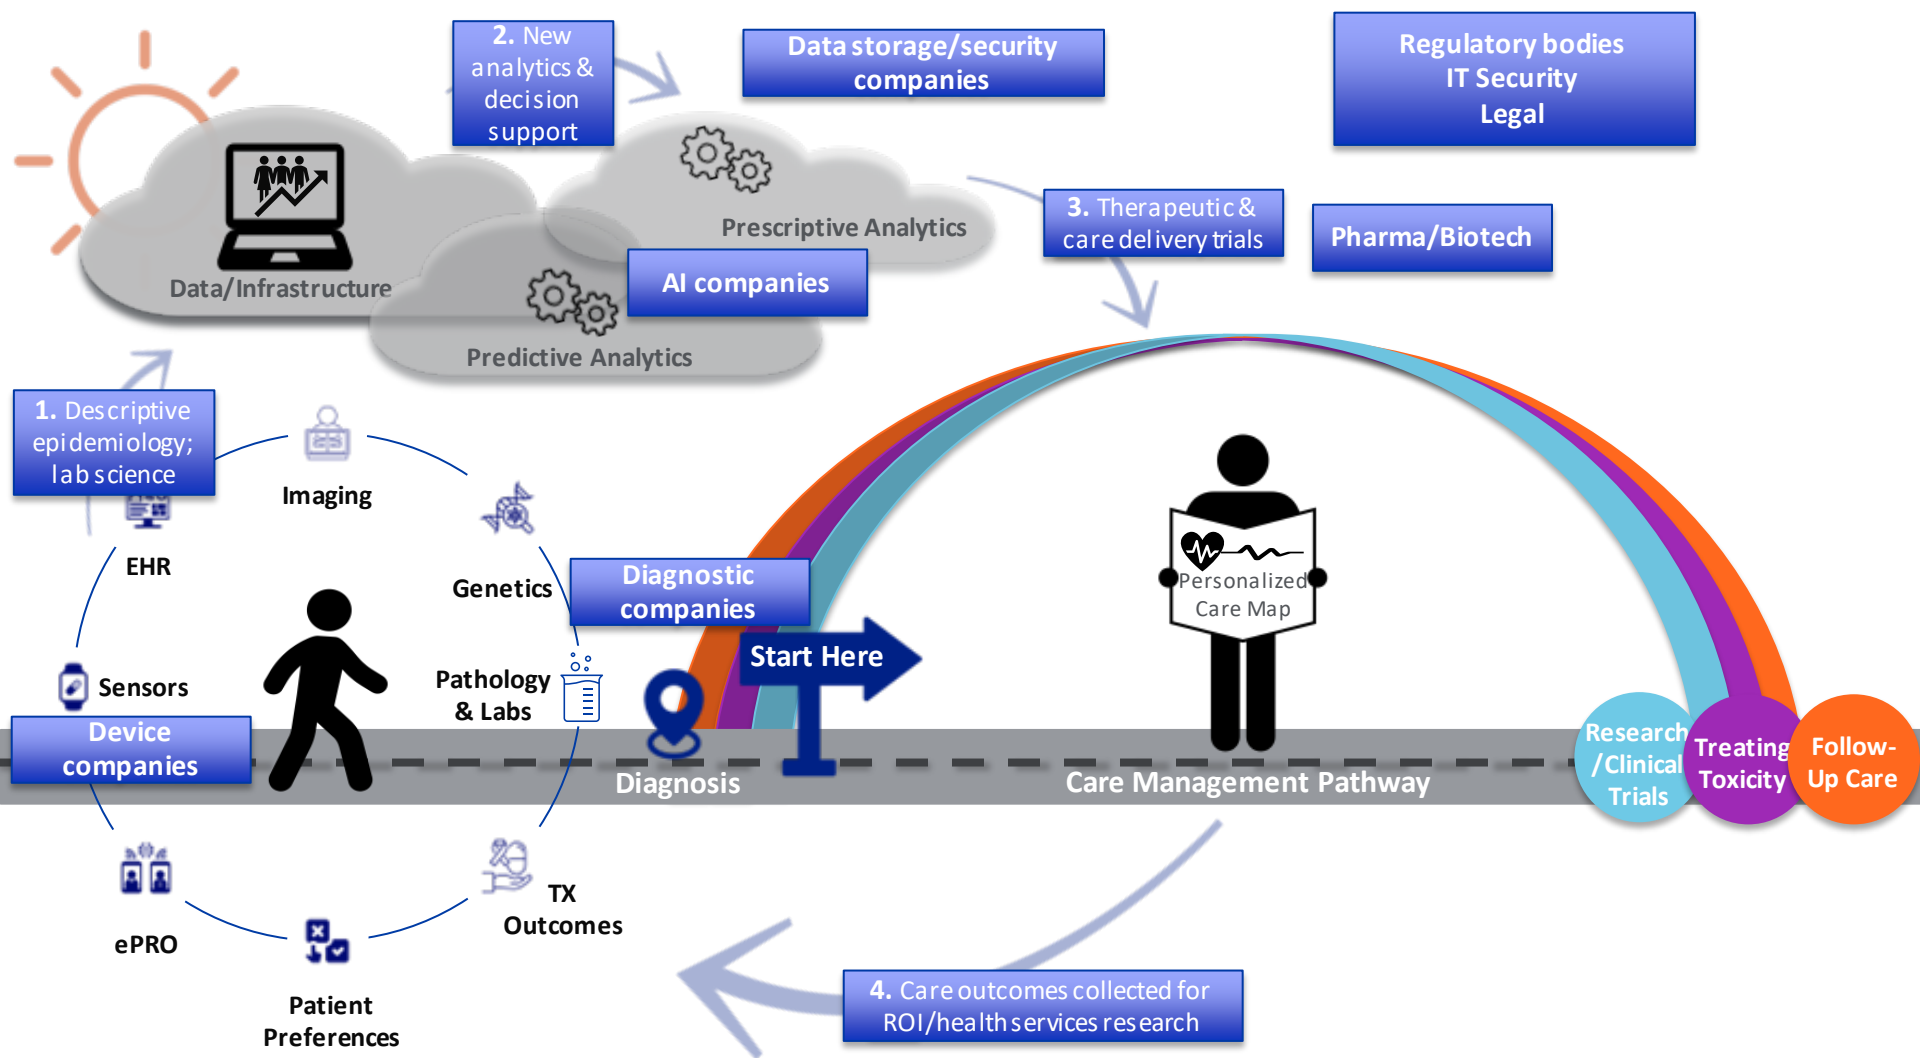

# Vision and Leadership are key

“The key enabler is leadership... that sets the direction, frames what you are trying to do, and then brings people along”. --Enticott et al, BMC Health Services Research, 20, 1087, 2020

## ... But not sufficient

Lesson learned #1.  
Involve many kinds of researchers, clinicians, patient advocates, leaders, and outside companies

# A Data Ecosystem with a Longitudinal View of a Patient Requires Collaboration across Siloed Sectors and Stakeholders

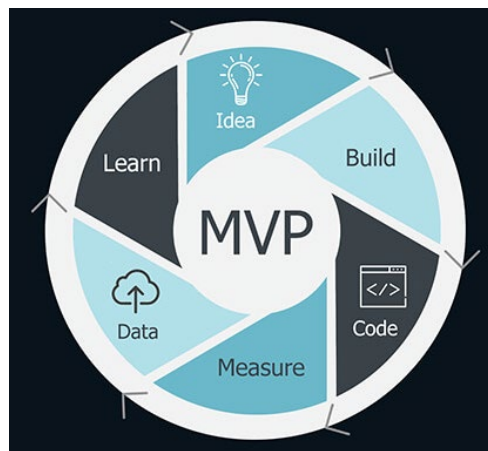

## Lesson learned #2:

This big vision can be a tough sell. Need to focus on a use case with compelling ROI\*

\*e.g. nursing separation & hiring needs

First build the MVP, then pilot test in a few sites, evaluate, learn, innovate, and disseminate

Evaluate ROI to garner more resources for future improvements

## Lesson learned #3.

Funding for building a connected data ecosystem is problematic and not in any one agency's mission

\* These are the  
top barriers for  
everyone

FIGURE 6

## SILOS—OF GROUPS, SYSTEMS, AND DATA—ARE HOLDING THINGS BACK

Health care organizations face a complex mix of hard and soft challenges

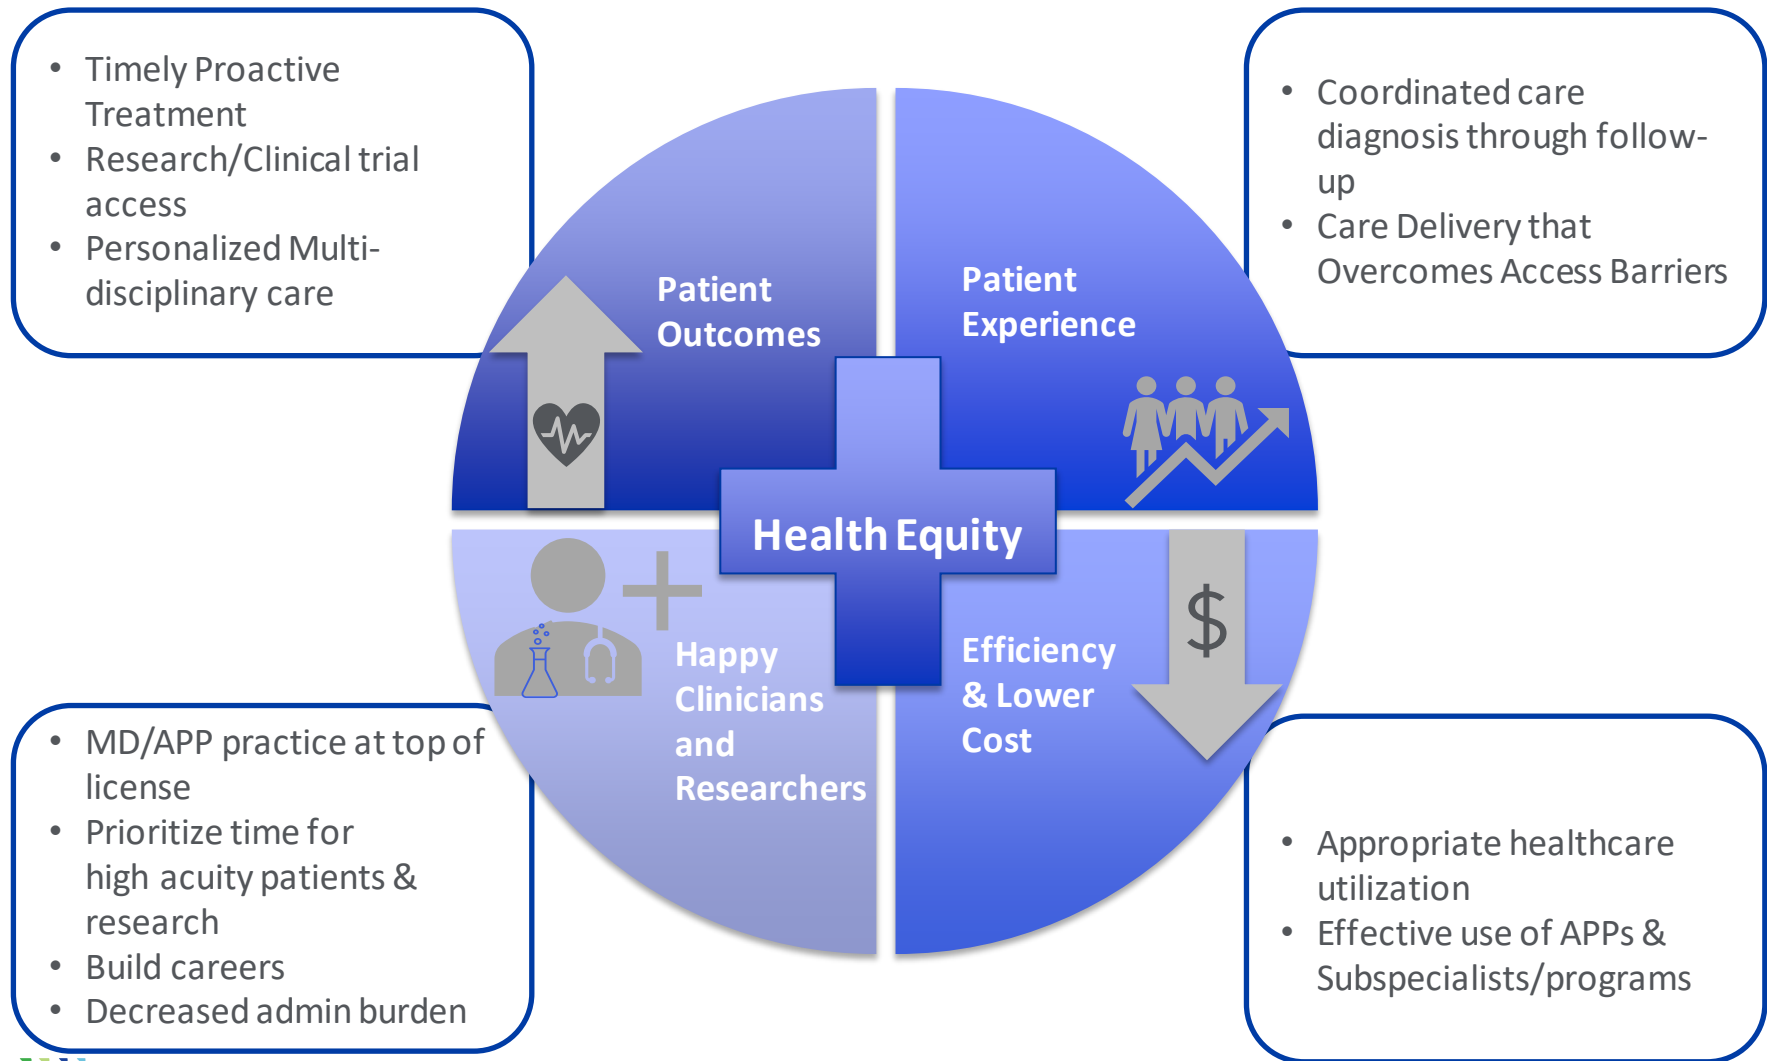

● PEOPLE: CULTURE AND SKILLS ● DATA: SYSTEMS, TOOLS, HARDWARE

SOURCE: HARVARD BUSINESS REVIEW ANALYTIC SERVICES SURVEY, APRIL 2019

Global survey of 742 health care leaders

# Why Push On? Personalizing care with a Learning Health System creates ROI: the Quintuple Aim of Healthcare

# A Time of Moon Shots and Grand Challenges

THE WHITE HOUSE

Administration Priorities The Record Briefing Room Español MENU

THE PRESIDENT AND FIRST LADY'S

## CANCER MOONSHOT

ENDING CANCER AS WE KNOW IT

The Cancer Moonshot is mobilizing efforts toward achieving two clear goals that the President and First Lady set: To prevent more than 4 million cancer deaths by 2047 and to improve the experience of people who are touched by cancer.

### ARPANET-H

ARPA-H Health Innovation Network

ARPANET-H is a nationwide health innovation network. The diagram shows a central map of the United States with a grid of dots. Surrounding the map are several glowing, multi-colored cubes (blue, green, yellow, red) connected by lines, representing a network of health innovation hubs across the country.

**ARPA-H launches ARPANET-H: A nationwide health innovation network**

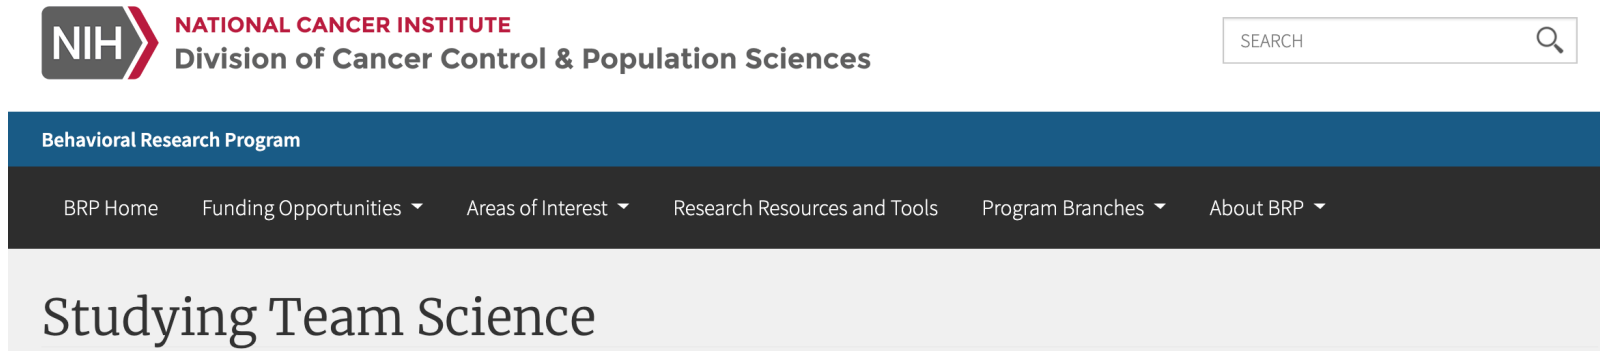

...mostly focused on novel therapeutics

“Nike knows how to use your data to sell you the right pair of shoes better than healthcare knows how to use your data to personalize your care”

Until we can better use our data, the best new therapeutics will fail!

# Proposal: Make Progress Building a Learning Health System by Applying Lessons Learned from Stimulating Team Science

- Large funded transdisciplinary projects promoted collaboration and connection and focused on compelling use cases
- New scientific frontiers were explored
- Training components created a new workforce in hybrid fields
- Initially slow progress led to higher impact and productivity

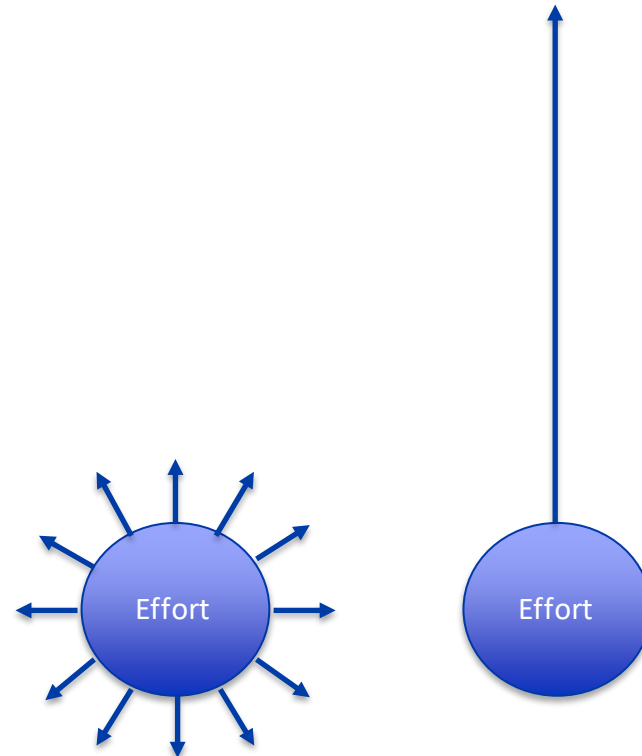

<https://cancercontrol.cancer.gov/brp/research/team-science-toolkit/about-scits/studying-team-science>

# We Can ONLY Meet These Goals by Working TOGETHER

## My Ask\*:

Trans-governmental funding for a collaboratory of 10 pilot sites that create functional data ecosystems with feedback loops & training programs, forming the backbone of a Learning Health System.

Deliverable: a blueprint for other health systems to follow

\*Also suggested by Califf et al, *Am J Bioethics*, 2023
