LULUCF

What land is included in the U.S.?

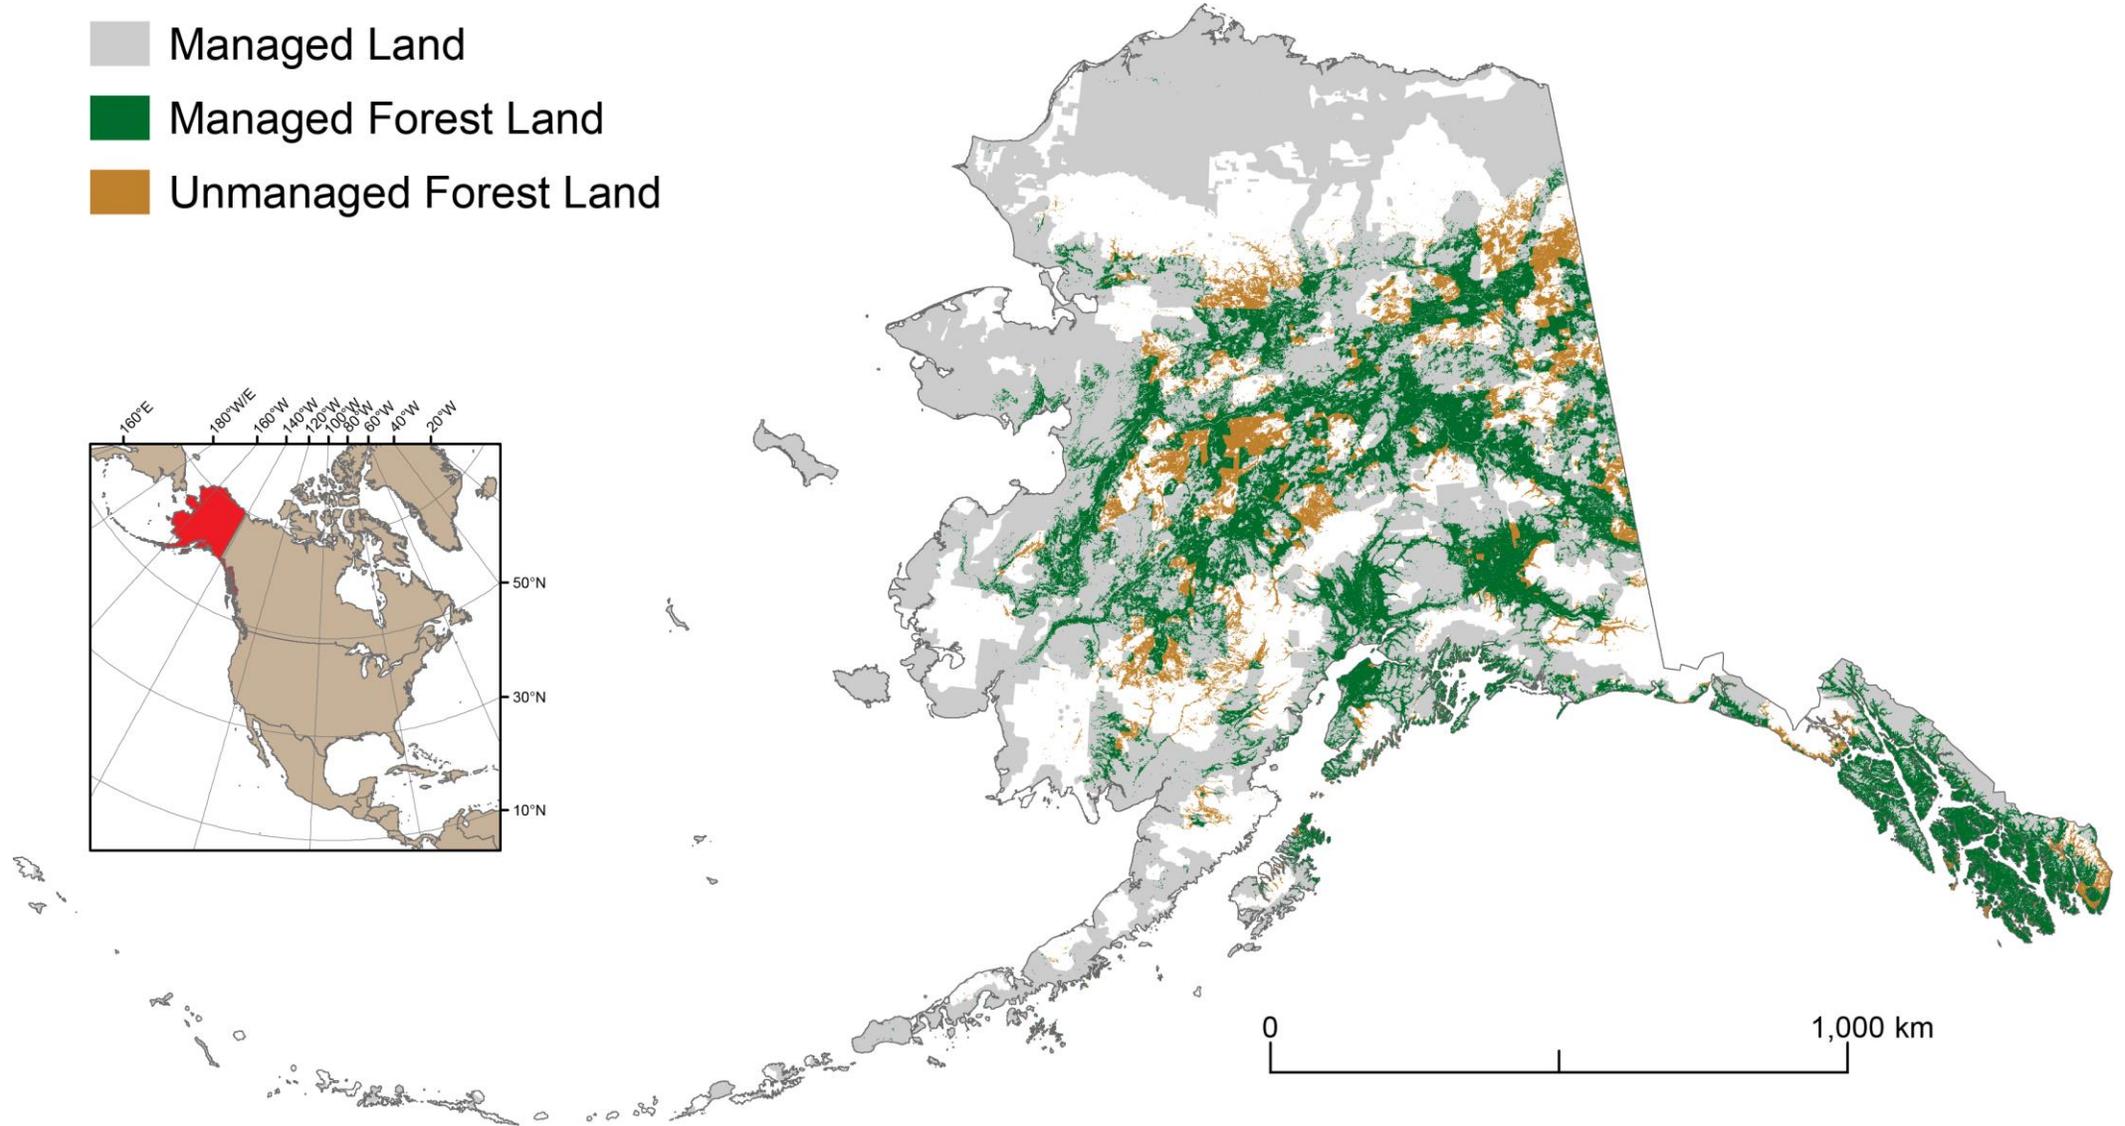

Distribution of forest land in the U.S.

Forest land
Nonforest land

Managed and unmanaged forest land in the U.S.

- Managed Land
- Managed Forest Land
- Unmanaged Forest Land

Emissions = area burnt × fuel × combustion × emission factor

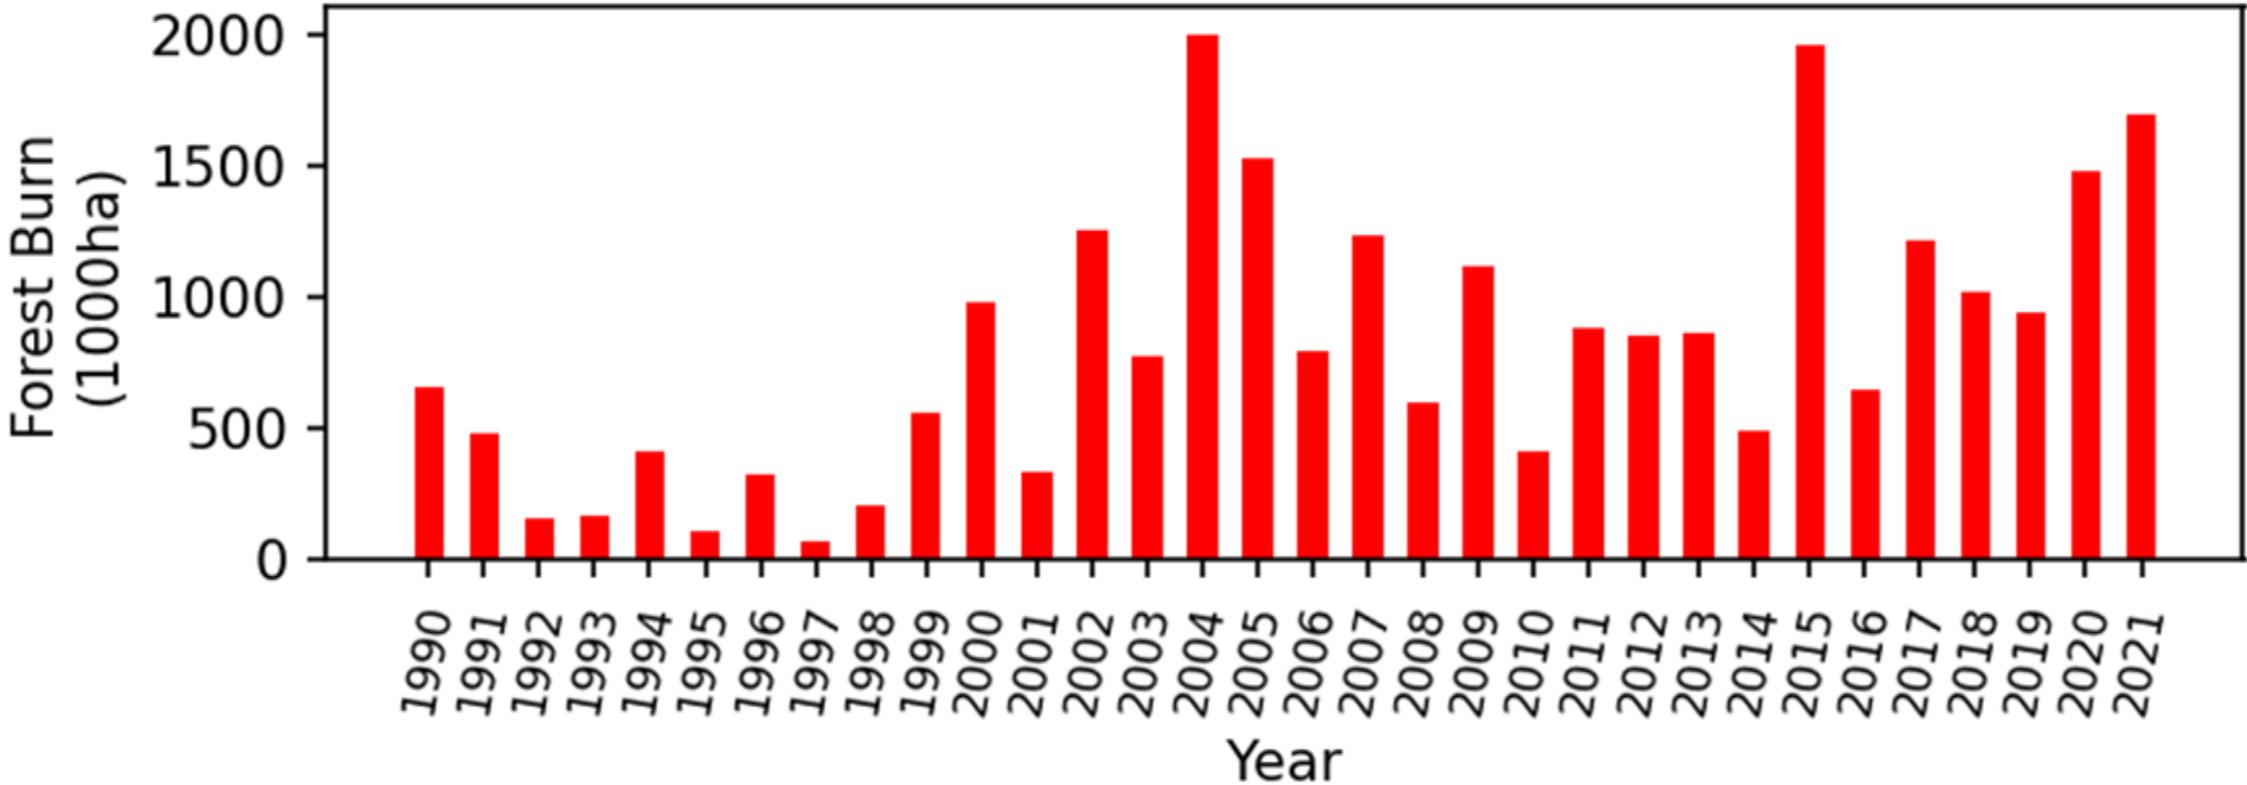

Various Sources

Wildland Fire Emissions Inventory System (WFEIS)

Area burnt (managed forest land), 1990-2021

MTBS records: 1984 – 2021

MODIS records: 2001 – 2022

WFIGS records: mid-teens (varies) – 2022

Smith, S.E., Billmire, M., French, N.H.F., Domke, G.M. In prep. Application of the Wildland Fire Emissions Inventory System to estimate fire emissions on forest lands of the United States. Intended outlet: Carbon Balance and Management.

Area burnt and forest fire emissions (managed forest land)

Domke, G.M. et al. 2023. Greenhouse gas emissions and removals from forest land, woodlands, urban trees, and harvested wood products in the United States, 1990–2021. Resource Bulletin WO-101. Washington, D.C.: U.S. Department of Agriculture, Forest Service, Washington Office. 10 p. <https://doi.org/10.2737/WO-RB-101>.

Prescribed fire on (managed) forest land

- Reported 947 kha forest burned in 2019 over 49 states, and of that, 234 kha is labeled prescribed according to MTBS
- National Interagency Fire Center lists 2,452 kha of prescribed fires for 2019
- The Coalition of Prescribed Fire Councils lists 4,048 kha of prescribed burn on forest and range land (and excluding ag. land) for the 50 states in 2019

Toward net-zero

- Account for emissions and removals on all lands
- Better use existing data and emerging sources
- Consider fire within the context of climate and other drivers of change
- Move toward carbon stewardship
- Be realistic about the potential of the land sector

Thank you
