What is the TORCH CIN and why does it exist?

Texas rural healthcare providers have not had wide access to value-based contracting opportunities, missing out on significant financial resources and related quality improvement opportunities as a result.

In response, TORCH has developed a Clinically Integrated Network (CIN). The TORCH CIN is committed to creating an avenue through which rural health care providers can successfully participate in value based contracting programs.

This requires creating a high performing statewide rural health care provider network with leadership focused on negotiating value-based incentive agreements not otherwise available to independent rural healthcare providers.

The TORCH CIN received its Tax ID in April of 2021 and has finalized an initial set of value-based contracts, including United Healthcare, Amerigroup, Aetna and the Medicare Shared Savings Program.

As required by applicable regulations and TORCH CIN organizational documents, the network now seeks to implement a clinical integration program which includes:

- establishing mechanisms to manage utilization, control costs, and assure quality;
- developing care management programs focused on vulnerable and chronically ill populations;
- implementing health management information tools to facilitate clinical decision support and reporting;
- achieving adequate patient volume to dampen outlier effects on quality, cost, and efficiency measures;
- investing in people, process, and technology resources to support related clinical process improvement efforts; and
- selectively choose participants who are likely to further these quality and efficiency objectives.

What is Clinical Integration?

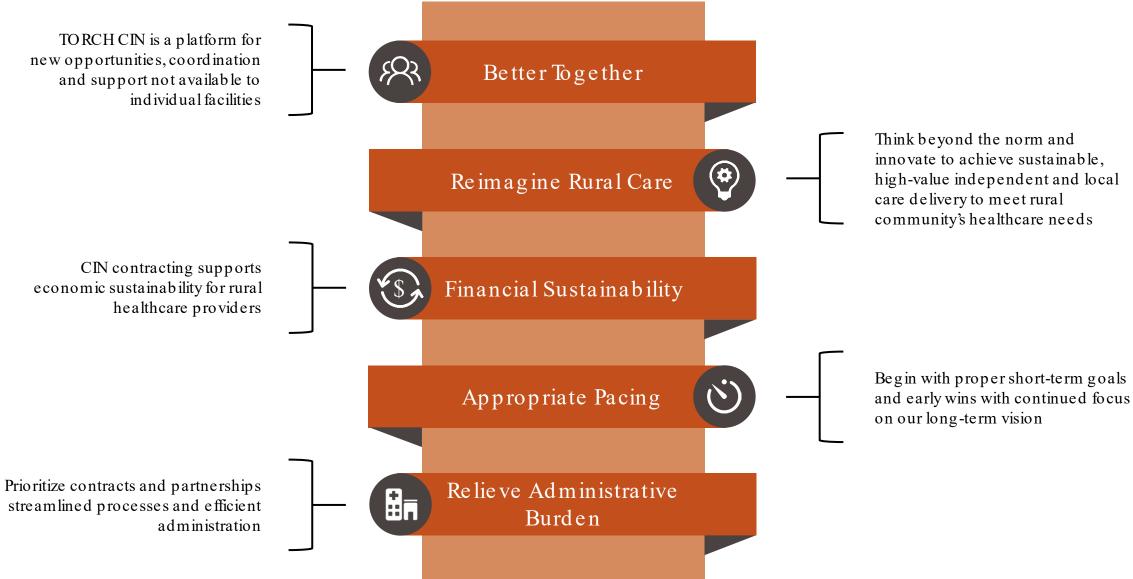

"Clinical Integration Program" means a program of active and ongoing initiatives designed to evaluate and modify the practice patterns of and create a high degree of interdependence and cooperation among health care providers, in order to improve the quality and efficiency of health care in the community and may change in meaning as that term may be subsequently defined by relevant guidance and enforcement policy of the U.S. Department of Justice and the Federal Trade Commission.

What is a Value Based Contract?

"Value Based Contract" means a written agreement executed by Network for itself or on behalf of participants in the Clinical Integration Program, pursuant to the authority granted in this Agreement, with a Payor pursuant to which Network, as part of its Clinical Integration Program, will provide products and services to the Payor and its Beneficiaries and which will involve payment or funding that account for performance on measures of quality, efficiency, utilization and other metrics developed by Network, which models may include, without limitation, risk based arrangements where payment is subject to substantial financial risk such as shared savings or capitated payment arrangements, and incentive arrangements where payments relate to the achievement of specified clinical, cost, enhanced access, and/or other performance-based goals.
