

# DIU + SPACE STIGUR Meeting

August 13, 2025

# Strengthening the National Security Innovation Base

DIU serves as the unified onramp that facilitates the engagement and growth of talent, earlystage tech, and non-traditional companies working to solve key DoD problems

#### **TALENT**

Source new talent from across the country

Physical presences for ecosystem to convene

#### CONCEPT

Commercialize tech from DoD labs, incubators, and accelerators

Develop novel solutions for DoD challenges with startups and academia

#### DEVELOPMENT

Accelerate targeted dual-use hardware

Catalyze private investment by de-risking development

Signal potential DoD demand

#### **PRODUCTION & SCALING**

Field initial capability to CCMDs and Services via agile BA8 funding

Transition from prototypes to fielded capabilities through follow-on, multi-year contracts in partnership with the Services Integrate technology into CONOPs

#### **PROTOTYPING**

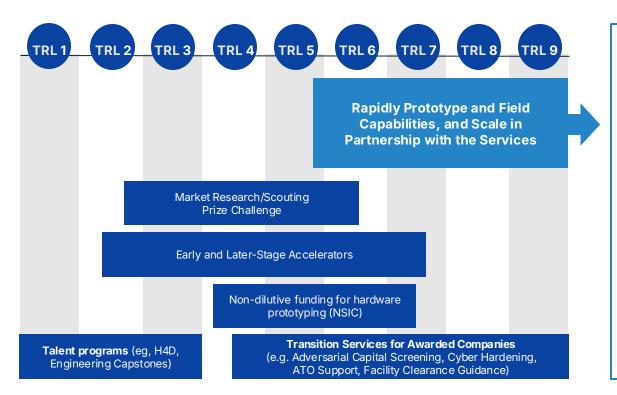

Prototype and transition commercial tech to DoD within 12-24 months

Focus on strategically-critical projects with a pathway to scale

Demonstrate DoD demand, provide reference cases

# Leverage a Variety of Tools to Deliver Solutions

#### Mechanisms

#### Prototyping & Fielding (DIU Projects)

- CSO process: award prototype OTs with the potential to transition into follow-on production without further competition
- Rapid Acquisition Prize Challenges
- Other DIU pathways (e.g., 10 U.S.C. § 4023, procurement for experimental purposes)
- Increase ongoing project \$: add funds to scale solutions within active OTs

### Prototyping & Fielding (Supporting Others' Projects)

- Funding support to emerging needs sourced from CCMD/Service Leadership (e.g., MIPR)
- Funding support to DICE partner investing in emerging innovative technologies (e.g., STRATFI, CDAO contract)

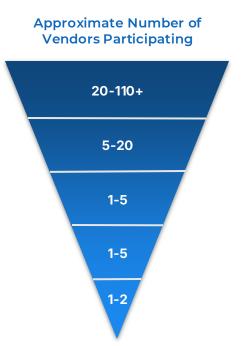

#### Transition & Scale

- Aligning DIU projects to hand off to Programs of Record
- Hand off to partners like CDAO, R&E, and A&S for DoD enterprise delivery

# OTA and Commercial Solutions Opening (CSO): Our Fast, Competitive Unique Project Lifecycle

Problem Curation & Diligence		<ul><li>Receive, understand, and evaluate DoD partner problem</li><li>Confirm commercial market exists to address problem</li></ul>	No Requirements
Commercial Solutions Opening (CSO)	Phase 1	•Solicit digital proposals in response to a problem statement	~10 business days
	Phase 2	●Evaluate proposals and invite a short list of bidders to pitch	60-90 days to contract award (goal)
	Phase 3	•Select contract awardee/s and negotiate agreement	
Prototyping		●Execute prototype project	12-24 months
Initial Fielding & Scaling		<ul><li>Award non-competitive agreement to successful performers</li><li>Deliver &amp; scale solution to transition partner/s</li></ul>	No Recompete FAR Not Req'd

# Presence Across U.S. = Asset for Early-Stage Support

Commerical Ops focuses on enhancing and leveraging local innovation ecosystems to help smaller and early-stage companies get their tech into the hands of our warfighters

### Regions

- 8 Regions, supported by 30+ externally oriented representatives across the country
- 5 On Ramp Hubs acting as Front Doors

#### **Universities**

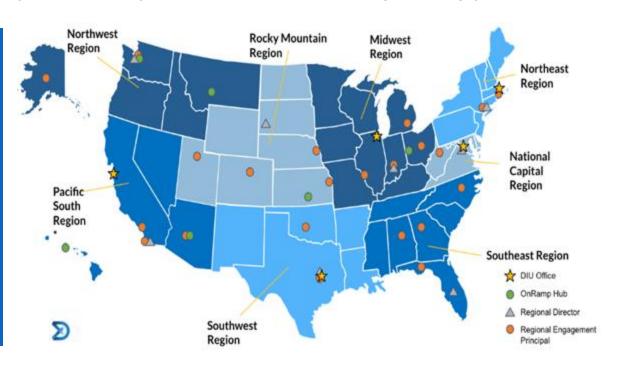

Engaged 85 universities

#### Companies

- Received solicitations from all 50 states
- Issued awards in 37 states + DC

#### **NEW LOCATIONS**

- → Wichita, Kansas
- → Phoenix, Arizona
- → Dayton, Ohio
- → Honolulu, Hawaii
- → Renton, Washington
- → Louisville, Kentucky
- → Montana
- → Minneapolis-St. Paul, Minnesota

# **Enablers: Prizes & Challenges**

Prize Challenges bring collaborators from the defense, academic, and venture communities together to work on challenging technical problems. These competitions can offer both monetary and non-monetary awards, fostering the development of dual-use technologies that meet both defense and commercial needs.

- Scouting/Market Research-Focused Challenges provide DoD mission partners with insights into emerging technologies through these prize competitions.
- Growth/Rapid Acquisition Challenges identify and validate solutions for immediate acquisition, streamlining the on-boarding process with inperson demonstrations and test evaluations. The Blue UAS Refresh Challenge is a recent example of this in action.
- DIU has also launched combined prize challenges with key foreign partners like Japan, India, and Singapore

# How: NSIC Prototype Support & Funding

National Security Innovation Capital (NSIC) enables dual-use hardware startups to advance key milestones in their product development by addressing the shortfall of private investment.

\$12.1M of Prototype Support for 5 Companies in FY2024

\$46.9M in Total Awards for 21 Companies from FY2021-24

#### FY24 examples include:

- SubSeaSail's autonomous surface vessel demonstrated technical viability and leveraged NSIC support to up their production capacity
- Spaceport's sea-based mobile launch platforms benefitted from NSIC support to establish a suborbital launch capability, attracting follow-on USAF funding and diversifying future launch options that will help respond to threats, deploy satellites, and reduce congestion at major launch sites
- Great Lakes Crystal Technologies, with its proprietary diamond substrate technology for next-generation microelectronics and sensor applications, demonstrated early R&D milestones off of SBIR contracts and is now working to demonstrate production viability via NSIC funding

# DIU Tech Portfolios At-A-Glance: 7 Sectors

AI/ML

**Autonomy** 

Cyber & Telecommunications

Energy

**Human Systems** 

Space Em

**Emerging Technology** 

THOMAS HORAN Director, AI/ML Portfolio Mountain View, CA

58 Awards \$189.5M

MICHELSON

Director,
Autonomy Portfolio
Boston, MA

DAVID

162 Awards \$664.0M

GOULD

Director, Cyber &
Telecommunication
Portfolio
Mountain View, CA

**PATRICK** 

70 Awards \$124.0M

HIGIER

Director,
Energy Portfolio
Mountain View, CA

DR. ANDREW

80 Awards \$377.6M

WHIT CHURCH

Director,

Human Systems Portfolio

Mountain View, CA

76 Awards \$407.4M

BUTOW

Military Deputy, DIU

Director, Space Portfolio

Mountain View, CA

78 Awards \$553.8M

ESTEP

Director, Emerging
Technologies Portfolio
Mountain View, CA

20 Awards \$159M

532 Prototype OT Awards at \$2.4B

### **Space Portfolio Focus Areas**

Responsive Space

Resilient Communications

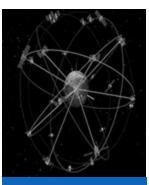

Persistent Sensing & Time Sensitive Awareness

Adaptive Manufacturing & Supply Chain Resiliency

Advanced Propulsion & Power

**Assured PNT** 

Rapidly (re)constitute most critical systems & capabilities to, from & through space with sustainable maneuver at affordable cost and massive scale.Includes point-to-point delivery & contested logistics.

Address the joint and coalition warfighter need for secured, assured, low latency, multi-path, trusted and resilient broadband & narrowband satellite voice/data comms across all domains.

Improved situational awareness & decision making at the tactical edge satisfied by less expensive, day/night, all-weather imaging satellites proliferated to sense in real time at the limit of persistence.

Accelerate growth of domestic space supply chain at economies of scale for on-demand & surge production while retaining agility through software-defined and Al-enabled adaptive manufacturing

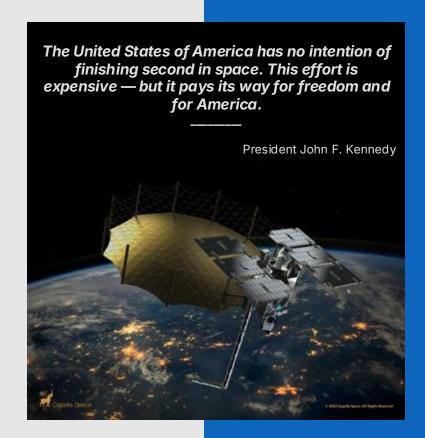

Accelerate development and integration of advanced in-space propulsion and nuclear power sources critical to increase survivability, performance and sustained maneuver of space systems.

Fuse conventional and unconventional methods of position, navigation, and timing at high precision to assure users access across all terrestrial and extraterrestrial domains.

# Vision

DIU's Space Portfolio facilitates DoD's access to commercial space technology while **leveraging** significant venture capital and private equity investment in "New Space" to achieve the following objectives:

- address strategic capability gaps;
- improve situational awareness and decision making;
- Create asymmetric advantage in sensing, information, maneuver and lethality,
- strengthen the U.S. space industrial base;
- improve interoperability with allies & partners;
- contribute to the preservation and sustainment of the United States' leadership in space.

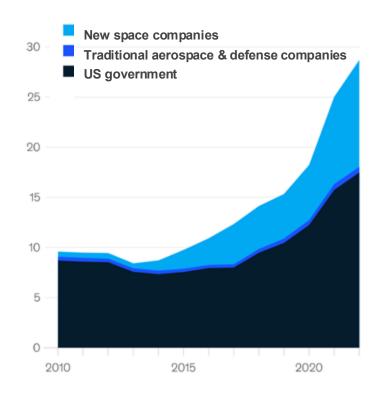

### **U.S. Space Related R&D Expenditures**

New space companies are increasingly fueling disruptive technology

- The United States tech sector contributes nearly \$2 trillion or 8.9% to the U.S. gross domestic product (GDP) today.<sup>1</sup>
  - O In comparison, the estimated value of the **global** space economy will be \$1.8 trillion by 2035.<sup>2</sup>
- Independent R&D (or IRAD) invested by traditional aerospace and defense companies remains at zero growth.<sup>3</sup>
  - O And yet, <1% of defense acquisition contracts are awarded to non-traditional companies.<sup>4</sup>
- Sustained U.S. space leadership is paramount to U.S. economic growth and national security.

<sup>&</sup>lt;sup>2</sup> Space Foundation Report, 2024

<sup>&</sup>lt;sup>3</sup> Future of Space Economy research, McKinsey and Company, 2024.

<sup>&</sup>lt;sup>4</sup> Defense Innovation Board, 2025.

### Value Proposition: Why a Space Portfolio?

### **Challenges:**

- Capital intensive
- Nascent commercial market
  - Greater dependence on government business
  - PRC postured to seize U.S. market share (U.S. satellite imaging is the most immediate at risk)
- Exquisite systems do not scale
- Government:
  - "Bespoke-first" culture within DoD
  - Standards & regulatory processes create barriers to innovation
  - Warfighter vs. intelligence needs often at odds
- Risk taking essential to achieve significant outcomes

### **Opportunities:**

- Space leadership leveraging commercial innovation
  - Short term: Deterrence
  - Long term: GDP growth
- Leverage significant private investment in space
- Fostering and procuring US-based capabilities will incentivize critical technology providers to develop in the U.S. for the U.S. market
- Talent pool extraordinary ... but must grow!
- Interagency collaboration → unified action
- Allied cooperation (NATO, AUKUS, Japan)
- Business Models (COCO, GOCO, GOGO, etc.)
  - Anything as a Service

# Projects:

# **Responsive Space**

- Novel Responsive Space Delivery (NRDS)
- Multi-Orbit Logistics Services
- Tactically Responsive Space (TacRS)
- Sinequone (xGEO, Cislunar)
- Modularity for Space Systems (M4SS: ISAM)
- Point to Point Multi-Domain Payload Delivery
- Hybrid Space Architecture (HSA)

# **Autonomy Portfolio Lines of Effort**

Unmanned Aerial Systems

Increasing access to small drones, lowering procurement barriers, and supporting the U.S. drone industrial base

Defense and Threat Protection

Defensive systems to detect, track, identify and defeat adversaries and threats

Maritime

Domain awareness, hazard defeat and resilient logistics

**Supply Chain** 

Sourcing, rapid design, manufacturing, storage, and transport of critical supplies and capabilities

**Ground Mobility** 

Technology to improve safety systems and fuel economy, increase force protection, and reduce boots on the ground

Software, Protocols, and Architecture

Fostering
interoperability for
seamless
collaboration,
reliability, and national
security

# Cyber Portfolio Lines of Effort

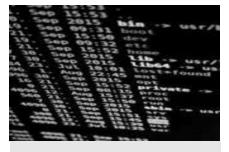

Electromagnetic & Spectrum Warfare

Bolster battlefield communications by providing secure and reliable data, video, and voice capabilities for service members in austere environments.

**Cyber Warfare Operations** 

Enable military cyber operators and analysts to combat malicious cyber threats, vulnerabilities, and effects against critical infrastructure.

Enterprise IT Security & Modernization

Update and enhance the security controls, usability, and defensive cyber posture of the DoD's enterprise IT networks and devices.

Al-Enabled Cyber Operations

Integrating AI-powered cybersecurity solutions into cyber warfare operations to lower the cognitive load on operators and analysts.
